Neuberger Berman Strategic Income Fund - W Class

VIEWPOINT

The Fund, managed by New York-based Neuberger Berman (NB), provides investors with exposure to a multi-sector fixed income strategy that seeks to maximise total returns whilst providing a monthly income stream that is at a premium to cash. Managed by NB's Multi-Sector Team (MST), the Fund invests across a broad range of fixed income sectors and targets returns from sector rotation and security selection. Zenith views favourably the Fund's differentiated process which combines a blend of quantitative research and the fundamental insights garnered from across NB's global network of sector specialists.

NB is a privately held global investment management group founded in 1939. As at 31 December 2019, NB managed approximately US\$ 356 billion globally, of which A\$ 8.5 billion was on behalf of Australian investors.

The MST is comprised of six senior members from across NB's global fixed interest (GFI) platform. Spread across Chicago and London, the team includes Brad Tank (CIO - Fixed Income), Ashok Bhatia (Deputy CIO and Senior Portfolio Manager) and Jon Johnson (Senior Portfolio Manager), who collectively share responsibility for the management of the Fund. In Zenith's opinion, the MST is comprised of high-quality investment professionals that have skill sets conducive to the management of a multi-sector fixed income strategy.

Supporting the MST are NB's sector specialists who interact through a series of structured meetings and produce research that acts as an input into the Fund's process. Most pertinent are the outputs from NB's quarterly Strategic Review Meeting (SRM) at which senior PMs from across NB's GFI platform meet to produce forward-looking market views and asset class return forecasts that aid in the determination of investment strategy.

NB's investment process is centred around opportunistically positioning the Fund across sectors, with the MST targeting those market segments deemed to be mispriced. Consistent with this approach, the Fund implements a flexible investment mandate and targets an asset mix deemed most likely to deliver upon the Fund's stated objectives. To aid with this, the MST use a proprietary optimiser to generate a set of theoretical portfolios, each of which offers a discrete risk/return outcome, reflecting varying asset class allocations.

Taking into consideration outputs of the optimiser and the views expressed across NB's global platform, the MST seek to reach consensus with regard to the Fund's targeted asset mix and strategies for extracting value. With respect to asset class exposures, these are gained on an interfunding basis, with capital allocated to NB's sector teams. Zenith notes that since the inception of the strategy, the Fund's asset mix has become more diversified, coinciding with NB's addition of specialist teams across its GFI platform. In Zenith's opinion, a broadening of NB's specialist capabilities has been of benefit to the Fund, permitting the MST to access a broader set of discrete market segments.

In managing the Fund, the MST generally favours physical exposure, however will use derivatives for efficient portfolio management in rates & duration strategies. In Zenith's opinion, this is a drawback of the Fund, noting the challenges facing the PM team in altering its exposure to credit. Furthermore, we believe NB's preference for physical exposure has the potential to constrain the opportunistic nature of the Fund, particularly in less liquid markets and times of market stress.

FUND FACTS:

- Multi-sector strategy that seeks to maximise total return whilst providing a monthly income stream
- High quality PM team that benefits from the specialist insights from across NB's global networks
- Process combines quantitative research with fundamental insights

SECTOR CHARACTERISTICS

The Zenith 'International Fixed Interest – High Income' sub-sector consists of all funds that invest predominantly in the higher-yielding sectors of the global fixed interest market. These sectors typically include high-yield, securitised loans and emerging market debt. The category includes funds that invest in specific underlying markets or a combination of each. Given the idiosyncratic nature of the sectors, managers commonly add value through security selection and/or sector rotation.

Zenith benchmarks all funds in this space against the Bloomberg AusBond Bank Bill Index. However, Zenith only uses this benchmark as a common reference point and it may not be reflective of the underlying benchmark used by many managers in this category.

It should be noted that the Bloomberg AusBond Bank Bill Index is typically used as a benchmark to measure the investment performance of a passively managed short-term cash portfolio. The Index has an average term to maturity of approximately 45 days. It is comprised of 13 domestic bank bills of equal face value, each with a maturity seven days apart.

Given the funds in the 'International Fixed Interest – High Income' sector invest in longer dated, higher default risk securities, they will potentially display higher downside volatility relative to the Zenith assigned Index. i.e. while the index is used as a performance benchmark, it should not be used as an indication of the risk involved in investing in the sector.

PORTFOLIO APPLICATIONS

The Fund is a multi-sector global fixed income strategy that is permitted to allocate across a range of higher yielding market segments including investment grade credit, high-yield, securitised assets, loans and emerging market debt. The Fund is subject to few constraints and is also permitted to invest in sovereigns (that trade at a premium to US Treasuries), albeit for spread rather than defensive purposes.

The Fund is positioned as a total return, income-orientated strategy and seeks to add value through a broad set of active strategies. Key amongst these are security selection (40%) and sector rotation (40%), with the former representing an avenue through which NB has a demonstrated track record.

Zenith believes the Fund may be appropriate for those investors seeking a strategy that pays a regular income stream in excess of cash. From a portfolio perspective, the Fund may be suitable as a component of an investor's global fixed interest allocation. That said, Zenith believes it may be more appropriate to fund an allocation to the strategy from the growth portion of their portfolios.

Due to the anticipated moderate to high levels of volatility, with the potential for capital loss, Zenith recommends taking a medium to long-term investment time frame. We caution against the Fund being used by investors with short term liquidity needs.

The Fund utilises a feeder fund structure, in that the domestic unit trust invests in an offshore domiciled fund. Zenith recommends investors seeking advice regarding the tax

implications of a feeder fund structure, consult with a taxation professional.

RISKS OF THE INVESTMENT

SECTOR RISKS

Funds within the 'International Fixed Interest – High Income' sub-sector are exposed to the following broad risks:

MARKET RISK: Changes in economic, technological, environmental or political conditions and market sentiment may lead to a decline in general security prices and overall market volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously.

INTEREST RATE RISK: Fixed interest securities are generally sensitive to changes in interest rates. An increase in interest rates may result in a fall in the value of these securities, while a decrease in interest rates can result in an increase in value.

CREDIT SPREAD RISK: In addition to being sensitive to general interest rate changes, non-government securities are also sensitive to changes in credit spreads (commonly the difference in yield between a government bond and a corporate security). A widening of spreads results in a fall in the value of these securities.

DEFAULT RISK: Given fixed interest securities represent loans to borrowers (including governments, banks and companies) there is a risk that these borrowers may default on interest or principal repayments. Credit risk is often reflected in credit ratings assigned by various credit agencies, which are subject to change.

CURRENCY RISK: In addition to being exposed to general market risk, investments in international markets are exposed to changes in value of the Australian dollar relative to other foreign currencies. This may lead to increased volatility, independent of market moves. While fixed interest funds typically hedge their foreign investments back into Australian dollars, there can be no guarantee that the funds will be hedged at all times or that a manager will be successful in employing the hedge.

LIQUIDITY RISK: Fixed interest markets can experience periods of illiquidity, which can result in difficulties in buying or selling securities without adversely impacting the price.

DERIVATIVE RISK: Derivatives are commonly employed by fixed interest managers to hedge currency and other risks and/or as an alternative to direct purchases or sales of underlying assets. There are multiple risks associated with the use of derivatives; for example, the value of the derivative may not move in line with the underlying asset, counterparties to the derivative may not be able to meet payment obligations or a particular derivative may be difficult or costly to trade.

LEVERAGE RISK: Many derivatives have a leverage component. While leverage offers the opportunity to magnify gains, it may additionally magnify losses. An associated risk with leverage and magnification of gains/losses is that the portfolio's volatility may increase as a result. Investors need to be cognisant that the Fund may exhibit more volatility than one that is unlevered.

REGULATORY RISK: The ASIC Regulatory Guide 97

'Disclosing Fees and Costs in Product Disclosure Statements and Periodic Statements' came into effect on 1 October 2017 and seeks to establish a common framework for disclosing fees with respect to registered managed investment schemes issued to retail investors.

In November 2019, ASIC released its final recommendations, with all proposed changes to be implemented by 30 September 2020.

In its current form, RG97 will not impact the actual costs (or after fee returns) on existing investments. Rather, the guide is focused on providing increased transparency with respect to the costs of management. Given this, it is feasible that under RG97, investors become more sensitive to the costs charged and seek lower cost alternatives, potentially leading to fund outflows.

FUND RISKS

Zenith has identified the following key risks of the Fund. Although Zenith believes the risks noted are all significant, we have listed them in order of importance. In addition, we have not intended to highlight all possible risks.

KEY PERSON RISK: Zenith believes there is a level of key person risk associated with CIO Tank, reflecting his long association with the Fund and historical perspective he retains. While the co-PM structure in part dilutes this risk, we nonetheless believe the departure of Tank would be a negative and necessitate a reassessment of the Fund's rating

LONGEVITY RISK: Funds which fail to grow FUM to a scalable level could be wound up and terminated by the Responsible Entity. The risks associated with a fund wind-up are principally that of timing, performance slippage, and the crystallisation of capital gains that bring with them tax payment obligations. NB currently manages approximately \$A 7.4 million in the Fund, as at 31 January 2020. Until the Fund reaches the requisite level of scale, there is a risk that the Fund could be wound-up.

DEFAULT RISK: The Fund is permitted to invest in high yield, a market segment which by its nature has a higher potential of default. Although investors have historically been compensated for these risks through incremental spread (and often returns), the sector is inherently more volatile than that of investment grade credit, and risks of capital loss tend to be magnified in this market segment. Additionally, defaults tend to cluster in certain years and therefore investors should expect periodic episodes of higher defaults.

Nevertheless, given the Fund can invest up to 75% of portfolio in sub-investment grade debt, investors should be aware of the increased risks associated with this market segment.

INCOME RISK: Notwithstanding the Fund's monthly distribution schedule and emphasis on income, there is a risk that NB fails to meet its distribution objectives.

CURRENCY RISK: The Fund is permitted to hold active currency positions. These have the potential to either add or detract from performance.

MANDATE RISK: The Fund's mandate is broad, permitting exposure across a range of market segments. By virtue of this flexibility, there is a risk the Fund performs in a manner that is differentiated to peers, potentially lagging that of benchmark-

relative strategies.

FUND STRUCTURE RISK: The performance of the Fund may vary from that of the master fund through which it gains exposure. This may be attributable to factors including differences in distribution frequency, cash drag, hedging mismatch and fees.

QUALITATIVE DUE DILIGENCE

ORGANISATION

Neuberger Berman Australia commenced operations in 2009 and is a wholly-owned subsidiary of Neuberger Berman Group (NB), a New York-based global investment manager.

Founded in 1939, NB is an employee-owned business with offices in 35 cities worldwide. Employing over 600 investment professionals globally, NB manages equity, fixed income, private equity and hedge fund strategies on behalf of institutions, advisors and individual investors.

As at 31 December 2019, NB managed approximately \$US 356 billion in funds under management (FUM) worldwide, of which \$A 8.5 billion was on behalf of Australian clients.

As at the same date, NB managed approximately US\$ 160 billion in fixed interest assets, spanning multi-sector, investment grade, non-investment grade, emerging market debt, municipals and alternatives. Included amongst these assets was the Strategic Income strategy which represented US\$ 15.1 as at the same date, with the Fund contributing A\$ 7.4 (as at 31 January 2020).

Zenith highlights that most of the Fund's FUM is internal seed capital with limited external investment. While NB has committed to retaining its investment over the medium term, the lack of external capital means the Fund is subject to longevity risk, principally the risk of being wound-up.

INVESTMENT PERSONNEL

Name	Title	Tenure
Brad Tank	Chief Investment Officer - Fixed Income	18 Yr(s)
Ashok Bhatia	Deputy Chief Investment Officer	3 Yr(s)
Jon Jonsson	Senior Portfolio Manager	7 Yr(s)

NB's GFI team comprises over 170 investment professionals and is led by Brad Tank, Chief Investment Officer - Fixed Income. Team members are predominately located in the US, albeit NB's regional footprint has continued to expand in recent years with a greater presence in Europe as well as increased resourcing across its Asian based Emerging Market Debt (EMD) team.

Responsibility for the Fund rests with NB's Multi Sector Team (MST). Comprising six members, the team is spread across Chicago and London, and comprises senior members from across NB's global network. Included amongst these are Tank, Ashok Bhatia (Deputy CIO and Senior Portfolio Manager), and Jon Johnson (Senior Portfolio Manager), who collectively share portfolio management (PM) responsibility for the Fund.

Tank joined NB in 2002 from Strong Capital Management

where he was Director of Fixed Income; and prior to this he was Vice President at Solomon Brothers. Located in Chicago, Tank retains a number of leadership responsibilities including member of NB's Operating, Investment Risk, Asset Allocation and Fixed Income Investment Strategy Committees. An experienced investor with a breadth of knowledge across the fixed income asset class, Zenith believes Tank is integral to the MST's deliberations. Furthermore, we note that Tank brings continuity and historical perspective to a team that has been subject to iteration in recent years.

Based in Chicago, Bhatia joined NB in 2017 and as Deputy CIO, is a member of the Fixed Income Investment Strategy Committee and the firm's Asset Allocation Committee. Prior to NB, Ashok held senior investment and leadership positions across several asset management firms and hedge funds, including Wells Fargo Asset Management, Balyasny Asset Management, and Stark Investments. With broad-based experience across global fixed income and currency markets, Zenith views positively the addition of Bhatia to the MST, considering him to be a strong contributor to the Fund's sector rotation strategies.

Jonsson joined NB in 2013 from JP Morgan where he was involved in the management of global aggregate and multi-sector funds over a period spanning 15 years. Based in London, Jonsson was promoted to the PM team in 2018, following the retirement of Senior Portfolio Manager Andrew Johnson.

The remaining members of the MST are David Brown (Head of Global Investment Grade Credit), Thanos Bardas (Head of Global Rates) and Adam Grotzinger (Senior Portfolio Manager), each of whom provide input into the formation of investment strategy.

The MST retains close lines of communication with analysts and portfolio managers from across NB's global platform, with the view to incorporating specialist insights to the team's deliberations. This is achieved through a series of structured meetings which promote the free flow of information with respect to valuations, market developments and the most contemporary views of its members.

Zenith notes that NB's global network of specialists has grown considerably in recent years. This has largely been achieved through acquisition, with NB's loan, EMD and European Fixed Income divisions the most recent additions to its stable. Zenith believes that as NB continues to broaden its specialist capabilities, this will be of benefit to the Fund, permitting the team to access a broader set of discrete betas.

Overall, Zenith believes the MST is comprised of high-quality investment professionals that have skill sets conducive to the management of a multi-sector fixed income strategy. Furthermore, we view favourably the team's ability to access specialist insights from across NB's global network, believing these aid with the derivation of investment strategy.

INVESTMENT OBJECTIVE, PHILOSOPHY AND PROCESS

The Fund aims to maximise total return, whilst providing a monthly income stream that is at a premium to cash. A secondary objective is to preserve capital and maintain volatility (as measured by Standard Deviation) at a similar level

to the Bloomberg Barclays US Aggregate Index.

To achieve these objectives, NB adopts an active approach to fixed income management, and seeks to construct a portfolio that benefits from a broad range of strategies. Included amongst these are duration, yield curve positioning, sector rotation, country and security selection. Operating within a flexible investment mandate, the Fund is opportunistically positioned across sectors, with the MST targeting those market segments deemed to be mispriced.

The investment process commences with the MST seeking to establish an asset mix that positions the Fund to deliver upon its stated objectives. To aid with this, the team takes into consideration the outputs of NB's Strategic Review Meeting (SRM). The SRM is convened quarterly and is a collaborative forum at which senior PMs from across NB's global platform discuss macroeconomic themes and asset class valuations. This meeting is separated into two sessions; the first is focused on developing a six to twelve-month forward view of the global economy, which is then contrasted to the current state. Members subsequently debate key areas of difference in an effort to reach consensus with respect to key economic variables (i.e. implied growth rates, inflation, the shape of forward yield curves) market directionality and a pecking order of conviction-based views.

The second session is focused on asset class relative valuations and the identification of market segments and industries deemed to be mispriced. To aid with this, participating members produce twelve-month forward return forecasts across a broad range of fixed income sectors including sovereigns, municipal, investment grade bonds, high yield, securitised assets and loans.

As part of this process, return forecasts are derived across a range of market states (i.e. strong growth, stable/deteriorating growth), with probabilities assigned to each of these. Zenith notes that market states may vary across sectors reflecting the fact that different factors impact their directionality. This process is designed to account for both probable and extreme outcomes and by consequence, necessitates sector PM's to take into consideration tail risks.

Zenith notes that forecasts are derived taking into consideration the bottom-up views of NB's specialist teams which meet regularly to exchange ideas. On a daily basis, sector teams review the work undertaken by credit analysts, highlighting rating developments and changes in credit views. These meetings are supplemented by monthly deep dive reviews at which asset class teams formulate views with respect to valuations, emerging trends and opportunities.

The next step in the process is to input return forecasts into a proprietary optimiser along with estimates of risk, asset class correlations, fund objectives and mandate constraints. Using an extended Black-Litterman modelling methodology, the optimiser generates a set of theoretical portfolios, each of which offers a discrete risk/return outcome, reflecting varying asset class allocations. The MST then determines the most appropriate naive portfolio, taking into consideration the qualitative views of its members.

In Zenith's opinion, NB's process is differentiated, effectively combining a blend of quantitative research with the fundamental insights garnered from across NB's global

network of sector specialists.

SECURITY SELECTION

The following section provides a broad overview of NB's credit selection process. Zenith notes however that each of NB's spread-based teams (i.e. investment grade, high yield, emerging market debt) implement a slightly different approach, reflecting the idiosyncrasies of their respective areas of coverage. That said, a high level of commonality does exist with respect to the level of fundamental due diligence undertaken by analysts, and the mechanism through which findings are translated into assessments of issuer credit worthiness and relative value.

Analysts are coordinated across industry lines and are assigned to sectors based on their past experience and areas of interest. Zenith notes that credit analysts are predominately career analysts with long tenure in their chosen area/s of speciality, permitting a deeper level of insight. Furthermore, analysts retain responsibility for 30-35 issuers which is broadly consistent with global competitors.

To promote a level of consistency with respect to credit research, NB implements a Best Practice Checklist, which requires analysts to consider a broad range of factors. Included amongst these are:

- **Business fundamentals:** business track record, ability to de-lever, business products, method of business growth.
- **Quality of Cash Flow:** impact on business risk, CAPEX, ability to delay commitments, accounting practices, cautious of large transformative acquisitions.
- **Scenario Analysis:** understand upside/downside potential across credit ratios, spreads and ratings, compare with industry and the company's own history.
- **Capital Structure:** management's intention and ability to manage the capital structure, focus on senior structures in tight capital markets.
- **Liquidity:** cash, bank lines, covenants, non-core asset sales, other sources of cash.
- **Environmental, Social and Governance (ESG) Scorecard:** industry-specific environmental and social factors, management and governance, customised industry weightings.

Next, analysts undertake detailed cash flow assessments, taking into consideration industry specific considerations (i.e. regulatory and competitive pressures) and outputs of the SRM. Most notable are the SRM's global growth, currency and commodity forecasts. Upon completion of their assessments, analysts are responsible for assigning issuer-based credit ratings, along with buy, hold or sell recommendations. Assessments are then subject to peer review, and once vetted, are presented to NB's Credit Committee for approval.

In Zenith's opinion, NB's credit selection process is well-structured and we view favourably the common framework adopted for the assessment of issuers.

PORTFOLIO CONSTRUCTION

The MST team is responsible for setting the Fund's investment strategy and overall risk tolerance. To aid with these responsibilities, the team meets weekly to discuss the Fund's key positions and risk setting, taking into consideration the outputs of NB's optimiser, the views expressed from across

NB's global channels and asset class valuations.

PM's seek to reach consensus with regard to the Fund's targeted asset mix and strategies for extracting value. With respect to asset class exposures, these are gained on an interfunding basis, with capital allocated to sector teams. Where these teams offer multiple strategies, preference is given to flagship offerings and those that are cost efficient.

Zenith notes that since the inception of the strategy, NB's targeted asset mix has become more diversified. This trend has coincided with the expansion of NB's global network to include a growing number of specialist teams. In Zenith's opinion, a broadening of NB's specialists capabilities will be of benefit to the Fund, permitting it to access discrete market segments that would otherwise be unavailable.

The Fund's permitted duration range is relatively wide at two to eight years. That said, the Fund's duration tends to fall within a range of three to six years, and reflects an outworking of the MST's security selection and optimisation processes. With respect to currency, the Fund may retain up to 20% in active positions. Zenith notes that in a relative context, the Fund's active currency parameters are wide, albeit NB has advised that its unlikely to test the mandate's outer limit, other than in extreme market conditions.

Notwithstanding the breadth of the Fund's mandate, the multi-sector team is selective in their use of derivatives for the purposes of trade execution. In Zenith's opinion, this is a drawback of the Fund, noting the challenges facing the MST in altering its exposure to credit. Furthermore, we view the team's preference for physical expression to be inconsistent with the intent of the strategy; specifically, extracting value from sector rotation, which necessitates the free flow of capital.

In Zenith's opinion, NB's portfolio construction process is scalable, drawing on the collective insights and views from across its global channels. That said, believe there is an opportunity to enhance trade execution through the use of derivatives which permit the MST to manage the Fund's duration and credit spread characteristics, while also enhancing its drawdown and skew profile.

RISK MANAGEMENT

Portfolio Constraints	Description
Duration	2-8 Years
Government & Agency (%)	-35% to 100%
Treasury Inflation-Protected Securities (%)	0% to 25%
Agency Mortgage Backed Securities	0 to 100
Asset Backed Securities (%)	0% to 50%
Commercial Mortgage Backed Securities (%)	0% to 50%
Non Agency / Credit Risk Transfers (%)	0% to 50%
Investment Grade Credit (%)	0% to 50%
Non-Investment Grade Credit (%)	0% to 75%

Portfolio Constraints	Description
Global Developed Market Sovereign (%)	-10% to 35%
Active Currency (%)	0% to 20%
ESG Exclusions	Child labour, controversial weapons

The Fund's mandate is broad and consistent with this, it is subject to few constraints (as detailed in the table above). With respect to portfolio risk, the Fund has no formal limits, rather is managed such that its volatility is consistent with that of the Bloomberg Barclays US Aggregate Index. Further, the Fund is positioned to produce a liquidity profile commensurate with a global investment grade portfolio.

The MST considers risk at multiple levels. At a portfolio level, the MST meet regularly to discuss the Fund's key exposures and risk positioning. To aid with their deliberations, members use BlackRock Alladin and Bloomberg Point to produce high level risk reports which are subsequently scrutinised. From a bottom-up perspective, risk is also considered through the due diligence undertaken by analysts who focus on credit quality and avoiding those issuers with deteriorating financials.

The investment team is supported by an independent risk function, led by Anne Brennan, Chief Risk Officer (CRO). This division comprises three separate sleeves, each of which have a discrete set of responsibilities including:

- Investment risk: analyse risk metrics, produce scenario analysis, stress testing and liquidity coverage ratios. In addition, this team audits performance analysis and provides independent assessments of portfolio managers
- Operational risk: this team is principally focused on identifying, monitoring and reporting on operational risks
- Asset Management Guideline Oversight: monitor compliance with investment mandates, independently critique and assess the integrity of the Fund's process, and provides support to the overall portfolio management process.

Zenith notes that there is a high degree of overlap in membership across each of the three risk divisions. In our opinion, greater independence across functions would add further credibility to the team's outputs. Notwithstanding this, we view favourably the existence of direct reporting lines between Brennan and NB's Chief Executive Officer.

With respect to Environmental, Social and Governance (ESG) factors, the Fund excludes investment in companies that use child labour or are involved in armaments and controversial weapons. ESG factors are also incorporated into the investment process in an integrated approach (see security selection).

Overall, Zenith believes NB's risk management framework is sufficient, noting the risk management team is well resourced and supported through both proprietary and third-party risk reporting systems.

INVESTMENT FEES

The sector average management cost is based on the average management cost of all flagship 'International Fixed Interest -

High Income' funds surveyed by Zenith.

The investment management cost of the Fund is 0.75% p.a. with no performance fee which is competitive.

There is a 0.10% buy/sell spread applicable to all applications and redemptions.

(The fees mentioned above are reflective of the flagship version only, fees may differ when the product is accessed through an alternate investment vehicle such as a platform).

Fees Type	Fund	Sector Average (Wholesale Funds)
Management Cost	0.75% p.a.	0.85% p.a.
Description		
Performance Fee	N/A	
		Buy Spread
Buy / Sell Spread	0.10%	0.10%

Zenith benchmarks funds within the 'International Fixed Interest - High Income' peer-group against the Bloomberg Bank Bill Index. While this benchmark may not be consistent with the one adhered to by all sector participants, it has been adopted to provide investors with a common reference point against which the performance of similarly structured strategies may be assessed.

The following commentary is current as at 31 January 2020.

The objective of the Fund is to maximise total return, whilst providing a monthly income stream that is at a premium to cash rates. The Fund is also positioned to preserve capital and maintain volatility at a similar level to the Bloomberg Barclays US Aggregate Index.

Given the Fund's recent inception (July 2019), there is currently insufficient performance history to conduct meaningful analysis. That said, we note that the Master Fund (through which the Fund gains exposure), has a track record dating back to April 2013 and in assessing historical performance, this strategy has produced longer-term outcomes broadly consistent with objectives, with a consistent contribution from spread centric sectors.

RELATIVE PERFORMANCE ANALYSIS

Alpha Statistics	Incpt.	6 mth	3 mth
Excess Return (% p.a.)	1.88	1.85	1.43
% Monthly Excess (All Mkts)	85.71	83.33	100.00
% Monthly Excess (Up Mkts)	85.71	83.33	100.00

Correlation	-0.47	-0.85	-0.96
Risk/Return	Incpt.	6 mth	3 mth
Information Ratio	1.65	1.58	1.24

The following commentary is current as at 31 January 2020.

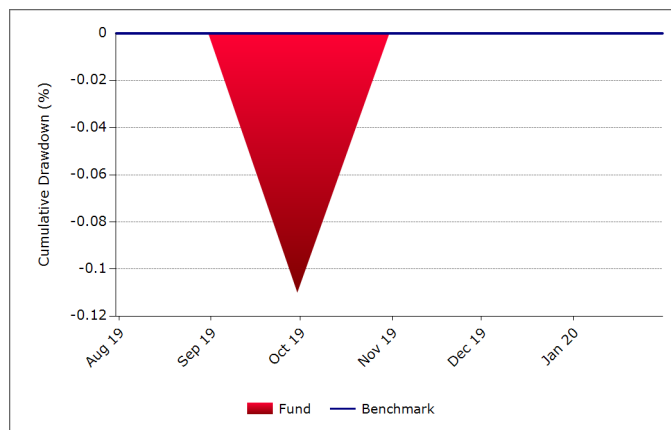

Given the Fund's recent inception (July 2019), there is currently insufficient performance history to conduct meaningful analysis.

DRAWDOWN ANALYSIS

Drawdown analysis assesses the relative riskiness of a Fund versus the benchmark, in reference to capital preservation. The maximum Drawdown is recorded as the percentage decline in the value of a portfolio from peak to trough (before a new peak is achieved). All Drawdown analysis is calculated commencing from the inception date of the Fund in question, and Drawdown analysis for the Fund and benchmark(s) are calculated independently. That is, the largest drawdown for the Fund and benchmark(s) will not always refer to the same time period.

Drawdown Analysis	Fund	Benchmark
Max Drawdown (%)	-0.11	
Months in Max Drawdown	1	
Months to Recover	1	

Worst Drawdowns	Fund	Benchmark
1	-0.11	
2		
3		
4		
5		

The following commentary is current as at 31 January 2020.

Given the Fund's recent inception (July 2019), there is currently insufficient performance history to conduct meaningful analysis.

INCOME/GROWTH ANALYSIS

The Fund has a monthly distribution schedule, with Zenith believing that through time the majority of total returns will be in the form of income.

DISCLAIMER AND DISCLOSURE

Zenith Investment Partners (ABN 27 103 132 672) is the holder of Australian Financial Services Licence 226872 and is authorised to provide general financial product advice. This Product Assessment Report (report) has been prepared by Zenith exclusively for Zenith clients and should not be relied on by any other person. Any advice or rating contained in this report is limited to General Advice for Wholesale clients only, based solely on the assessment of the investment merits of the financial product. This report is current as at the date of issue until it is updated, replaced or withdrawn and is subject to change at any time without notice in line with Zenith's regulatory guidelines. Zenith clients are advised to check the currency of reports and ratings via Zenith's website for updates. Any advice contained in this report has been prepared without taking into account the objectives, financial situation or needs of any specific person who may read it. It is not a specific recommendation to purchase, sell or hold the relevant product(s). Investors should seek their own independent financial advice, obtain a copy of, and consider any relevant PDS or offer document and consider the appropriateness of this advice in light of their own objectives prior to making any investment decision. Zenith charges an upfront flat fee to the Product Issuer, Fund Manager or other related party to produce research on funds that conform to Zenith's Research Methodology. Zenith's fee and Analyst remuneration are not linked to the rating outcome in any way. Views expressed in Zenith reports accurately reflect the personal, professional, reasonable opinion of the Analyst who has prepared the report. Zenith may also receive a fee for other non-research related services such as subscription fees for Zenith's research services and/or for the provision of investment consultancy services. Conflicts management arrangements are in place where Zenith provides research services to financial advisory businesses who provide financial planning services to investors and are also associated entities of the product issuers, with any such conflicts of interest disclosed within reports as appropriate. Full details regarding such arrangements are outlined in Zenith's Conflicts of Interest Policy www.zenithpartners.com.au/ConflictsOfInterestPolicy

Zenith's research process seeks to identify investment managers considered to be the 'best of breed' through a comprehensive, multi-dimensional selection process. Zenith utilises both quantitative and qualitative factors in its ratings models. Models maximise commonality across different asset classes while retaining flexibility for specialist asset classes and strategies. The selection process is rigorous in both its qualitative and quantitative analysis and each component is equally weighted. Zenith does not manage any proprietary assets and as such Zenith is able to choose investment managers with absolute independence and objectivity. More detailed information regarding Zenith's research process, coverage and ratings is available on Zenith's website www.zenithpartners.com.au/ResearchMethodology
