Neuberger International Core Equity ETF

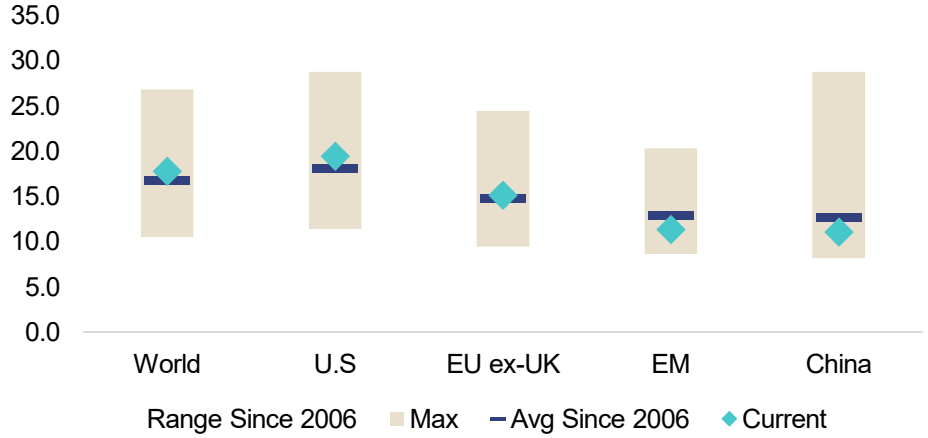

TICKER: NBIE **GROSS EXPENSE:** 0.87[1] **NET EXPENSE:** 0.29%[1]

Why Allocate to International Equities?

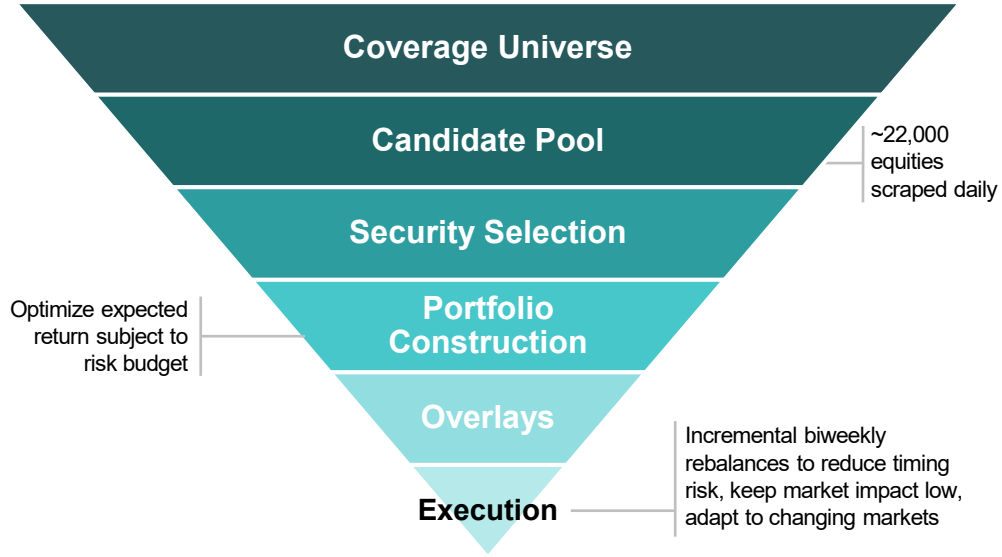

Recent market rotations may represent an opportunity for active investors

Global Forward P/E by Region

Forward P/E Current vs. Average (mean) Since 2006

Quantitative Enhanced Portfolio Construction

Invests in Non-U.S. Developed Markets through Active Security Selection

Rigorous Investment Selection is Systematic and Repeatable

Tenured Portfolio Management Team with $16.7bn in Assets

Multi-factor quantitative analysis leverages Neuberger's fundamental Research Platform of 50+ analysts

Security Selection Targets Drivers of Equity Returns Across 6 Dimensions

Identify companies with attractive characteristics across multiple factors

VALUE | **QUALITY** | **INCOME**

MOMENTUM/ SENTIMENT | **LOW-RISK** | **GROWTH**

All statistics as of June 30, 2026 unless otherwise indicated. Past performance is no guarantee of future results. Please refer to the disclosure section on page 2 of this document for index and risk statistic definitions. This material is intended as a broad overview of the Portfolio Managers' style, philosophy and process and is subject to change without notice. Investing entails risks, including possible loss of principal. Historical trends do not imply, forecast or guarantee future results. Nothing herein constitutes a prediction or projection of future events or future market behavior. Due to a variety of factors, actual events or market behavior may differ significantly from any views expressed.

Net expense ratio represents the total annual operating expenses that shareholders pay (after the effect of fee waivers). The Fund's investment manager has contractually undertaken to waive and/or reimburse certain fees and expenses of the Fund so that the total annual operating expenses (excluding interest, brokerage commissions, acquired fund fees and expenses, taxes including any expenses relating to tax reclaims, dividend and interest expenses relating to short sales, and extraordinary expenses, if any) of the Fund are limited to 0.29% of average net assets until 8/31/2029 and may not be terminated during its term without the consent of the Board of Trustees. The Fund has agreed that it will repay the Manager for fees and expenses waived or reimbursed for the Fund provided that repayment does not cause annual Operating Expenses to exceed the expense limitation in place at the time the fees were waived and/or the expenses were reimbursed, or the expense limitation in place at the time the Fund repays the Manager, whichever is lower. Any such repayment must be made within three years after the year in which the Manager incurred the expense. For detailed information, please read the most recent prospectus, as amended and supplemented.

Information (including holdings and portfolio characteristics) is as of the date indicated and is subject to change without notice.

Definitions
MSCI World ex USA Index Net is an index that covers approximately 85% of the free float-adjusted market capitalization in each country. It captures large and mid cap representation across 22 of 23 Developed Markets countries, excluding the United States. Developed Markets countries in the index include: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the UK. Net total return indexes reinvest dividends after the deduction of withholding taxes, using (for international indexes) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

Please note that indices do not take into account any fees or expenses of investing in the individual securities that they track, and that individuals cannot invest directly in any index. Data about the performance of the index are prepared or obtained by the Manager and include reinvestment of all dividends and capital gain distributions. The Fund may invest in many securities not included in the above-described indices.

Forward P/E – (Forward Price-to-Earnings Ratio) is a valuation metric that compares a company's current stock price to its expected earnings per share (EPS) over the next 12 months. Calculation is the Current Share Price /Estimated Forward EPS.

IMPORTANT RISK INFORMATION An investor should consider the Fund's investment objectives, risks and fees and expenses carefully before investing. This and other important information can be found in the Fund's prospectus, and if available summary prospectus, which you can obtain by calling 877.628.2583. Please read the prospectus, and if available the summary prospectus, carefully before making an investment.

All ETF products are subject to risk, including possible loss of principal. Stock prices fluctuate, sometimes rapidly and dramatically, due to factors affecting individual companies, particular industries or sectors, or general market conditions, including adverse issuer, political, regulatory, market, economic or other developments that may cause broad changes in market value, public perceptions concerning these developments, and adverse investor sentiment. An individual security may be more volatile, and may perform differently, than the market as a whole. Unlike mutual funds, ETF shares are purchased and sold in secondary market transactions at negotiated market prices rather than at net asset value ("NAV") and as such ETFs may trade at a premium or discount to their NAV. As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. ETF shares may only be redeemed at NAV by authorized participants in large creation units. There can be no guarantee that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed. The trading of shares may incur brokerage commissions. The Fund has a limited number of Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Unexpected episodes of illiquidity, including due to market factors, instrument or issuer-specific factors and/or unanticipated outflows, could have a significant negative impact on the Fund's NAV, liquidity, and brokerage costs. To the extent the Fund's investments trade in markets that are closed when the Fund is open, premiums or discounts to NAV may develop in share prices.

The Fund is new with limited operating history to evaluate. New funds may not attract sufficient assets to achieve investment, trading or other efficiencies and, if the Fund does not grow in size, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV and/or a stop to trading. Most of the Fund's performance depends on what happens in the stock market, the Portfolio Managers' evaluation of those developments, and the success of the Portfolio Managers in implementing the Fund's investment strategies. The market's behavior can be difficult to predict, particularly in the short term. There can be no guarantee that the Fund will achieve its goal.

At times, large-cap companies may be out of favor with investors. Compared to smaller companies, large-cap companies may be unable to respond as quickly to changes and opportunities and may grow at a slower rate.
Depositary receipts involve many of the same risks of investing directly in the underlying foreign securities. Depositary receipts are subject to the risk of fluctuation in the currency exchange rate if, as is often the case, the underlying foreign securities are denominated in foreign currency, and there may be an imperfect correlation between the market value of depositary receipts and the underlying foreign securities.

To the extent the Fund invests in other investment companies, including money market funds and exchange-traded funds (ETFs), its performance will be affected by the performance of those other investment companies.

Depositary receipts are certificates issued by a financial institution evidencing ownership of underlying foreign securities. While depositary receipts involve many of the same risks of investing directly in the underlying foreign securities, they may be less liquid and more volatile than investing directly in such securities.

The actual risk exposure taken by the Fund in its investment program will vary over time, depending on various factors including the Portfolio Managers' evaluation of issuer, political, regulatory, market, or economic developments. There can be no guarantee that the Portfolio Managers will be successful in their attempts to manage the risk exposure of the Fund or will appropriately evaluate or weigh the multiple factors involved in investment decisions, including issuer, market and/or instrument-specific analysis, valuation and environmental, social and governance factors. Currency risk is the risk that foreign currencies will decline in value relative to the U.S. dollar. To the extent that the Fund invests in securities or other instruments denominated in or indexed to foreign currencies, changes in currency exchange rates could adversely impact investment gains or add to investment losses.

Foreign securities involve risks in addition to those associated with comparable U.S. securities. Additional risks include exposure to less developed or less efficient trading markets; social, political, diplomatic, or economic instability; trade barriers and other protectionist trade policies (including those of the U.S.); imposition of economic sanctions against a particular country or countries, organizations, companies, entities and/or individuals; significant government involvement in an economy and/or market structure; fluctuations in foreign currencies or currency redenomination; potential for default on sovereign debt; nationalization or expropriation of assets; settlement, custodial or other operational risks; higher transaction costs; confiscatory withholding or other taxes; and less stringent auditing and accounting, corporate disclosure, governance, and legal standards. As a result, foreign securities may fluctuate more widely in price, and may also be less liquid, than comparable U.S. securities.

Securities of issuers traded on foreign exchanges may be suspended, either by the issuers themselves, by an exchange, or by governmental authorities. Trading suspensions may be applied from time to time to the securities of individual issuers for reasons specific to that issuer, or may be applied broadly by exchanges or governmental authorities in response to market events. In the event that the Fund holds material positions in such suspended securities or instruments, the Fund's ability to liquidate its positions or provide liquidity to investors may be compromised and the Fund could incur significant losses.

Both U.S. and international markets have experienced significant volatility in recent months and years. As a result of such volatility, investment returns may fluctuate significantly. National economies are substantially interconnected, as are global financial markets, which creates the possibility that conditions in one country or region might adversely impact issuers in a different country or region. However, the interconnectedness of economies and/or markets may be diminishing, which may impact such economies and markets in ways that cannot be foreseen at this time. From time to time, based on market or economic conditions, the Fund may have significant positions in one or more sectors of the market. To the extent the Fund invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors.

Risk is an essential part of investing. These and other risks are discussed in more detail in the Fund's prospectus. Please refer to the Fund's prospectus for a complete discussion of the Fund's principal risks.
