Fund Profile

Investors should note that, relative to the expectations of the Autorité des Marchés Financiers, this fund presents disproportionate communication on the consideration of non-financial criteria in its investment policy.

This is a marketing communication. Please refer to the fund prospectus and offering documents, including the Key Information Document ("KID") or Key Investor Information Document ("KIID") as applicable, before making any final investment decisions. Investors should note that by making an investment they will own shares in the fund, and not the underlying assets.

Neuberger US Equity Premium Fund*

What Is It?

The Neuberger US Equity Premium Fund aims to generate returns through the selling of Put Options on US equity indices.

What Is a Put Option?

A Put Option is bought by investors to mitigate against falling prices. Like an insurance policy, it transfers risk in exchange for a premium.

Why Sell or 'Write' Put Options?

Investors seeking protection from market falls are prepared to pay high premiums. Historically, the annualized median premium has been over 18%.[1] Consistently taking in these premiums results in a defensive equity return profile with a number of advantages.

How does it work?

Why Consider This Fund?

Buyers often overpay for protection. As such, consistently selling (or "writing") Put Options has a long track record of generating equity-like returns with significantly lower volatility than the market over the long term. High valuations today potentially limit future equity returns. Selling Put Options has historically delivered strong outcomes in various market conditions.

Expected Behaviour

Typical strategy performance relative to the S&P 500

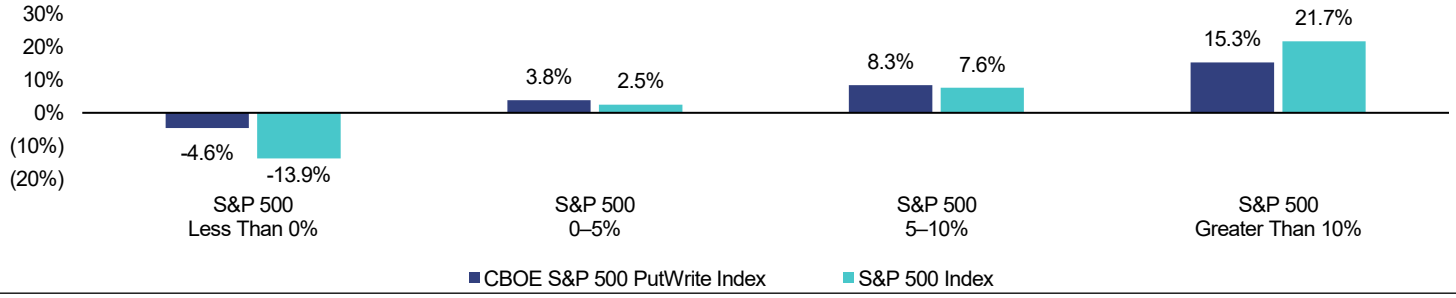

Down markets: Outperform the index
The strategy will typically incur losses, but these will be partially offset by the premiums collected

Flat markets: Outperform the index
While the underlying index is flat, the strategy continues to collect premiums

Up markets: Cautious in strong markets
Since the strategy doesn't own the underlying index, it will not fully participate in up markets, but continues to collect premiums

Average 1-year rolling returns by scenario[1]

Why Now?

Common current market concerns	Why Put Write?
Market stagnation/decline Equity valuations currently continue to be supported by strong demand, rising corporate earnings and higher commodity prices, but is this sustainable?	Historically outperformed in down and flat markets, lagging in up markets
Rising interest rates Rates have been ultra-low in recent years, but with a rethinking of accommodative monetary policies underway, how fast and how far will rates go?	Potential for interest income from short duration collateral portfolio
Increased volatility Volatility levels are low compared to historical averages, could political uncertainty spark volatility?	Potential for larger premium collection

Key Risks

Counterparty Risk: The risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date.

Currency Risk: Investors who subscribe in a currency other than the base currency of the fund are exposed to currency risk. Fluctuations in exchange rates may affect the return on investment. Where past performance is shown it is based on the share class to which this factsheet relates. **If the currency of this share class is different from your local currency, then you should be aware that due to exchange rate fluctuations the performance shown may increase or decrease if converted into your local currency.**

Derivatives Risk: The fund is permitted to use certain types of financial derivative instruments (including certain complex instruments). This may increase the fund's leverage significantly which may cause large variations in the value of your share. (Investors should note that the fund may achieve its investment objective by investing principally in Financial Derivative Instruments (FDI)). Certain investment risks apply in relation to the use of FDI. The use of leverage can amplify both gains and losses, which may result in a significant or a total loss of the fund's value in adverse market conditions.

Interest Rate Risk: The risk of interest rate movements affecting the value of fixed-rate bonds.

Liquidity Risk: The risk that the fund may be unable to sell an investment readily at its fair market value. In extreme market conditions this can affect the fund's ability to meet redemption requests upon demand.

Market Risk: The risk of a change in the value of a position as a result of underlying market factors, including among other things, the overall performance of companies and the market perception of the global economy.

Operational Risk: The risk of direct or indirect loss resulting from inadequate or failed processes, people and systems including those relating to the safekeeping of assets or from external events.

For full information on these and other risks, please refer to the fund prospectus and offering documents, including the KID or KIID, as applicable.

This Fund meets the requirements of Article 6 of the SFDR. Further information is available in the Fund's offering documents and at www.nb.com

DISCLOSURES

No recommendation or advice is being given as to whether any investment or strategy is suitable for a particular investor. Each recipient of this document should make such investigations as it deems necessary to arrive at an independent evaluation of any investment, and should consult its own legal counsel and financial, actuarial, accounting, regulatory and tax advisers to evaluate any such investment.

It should not be assumed that any investments in securities, companies, sectors or markets identified and described were or will be profitable. Investors may not get back the full amount invested.

Any views or opinions expressed may not reflect those of the firm as a whole. All information is current as of the date of this material and is subject to change without notice.

The fund described in this document may only be offered for sale or sold in jurisdictions in which or to persons to which such an offer or sale is permitted. The fund can only be promoted if such promotion is made in compliance with the applicable jurisdictional rules and regulations. This document and the information contained therein may not be distributed in the US. Indices are unmanaged and not available for direct investment.

An investment in the fund involves risks, with the potential for above average risk, and is only suitable for people who are in a position to take such risks. For more information please read the prospectus which can be found on our website at: www.nb.com/europe/literature.

Past performance is not a reliable indicator of future results. The value of investments may go down as well as up and investors may not get back any of the amount invested. The performance data does not take account of the commissions and costs incurred by investors when subscribing for or redeeming shares.

The value of investments designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. Tax treatment depends on the individual circumstances of each investor and may be subject to change, investors are therefore recommended to seek independent tax advice.

Investment in the fund should not constitute a substantial proportion of an investor's portfolio and may not be appropriate for all investors. Diversification and asset class allocation do not guarantee profit or protect against loss.
