General Information

The following information is derived from and should be read in conjunction with the full texts and definitions section of the Prospectus.

Neuberger Berman Investment Funds plc (the "Company") is an investment company with variable capital incorporated in Ireland on 11 December 2000 under registration number 336425 as a public limited company pursuant to the Companies Act 2014 (as amended). The Company has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities pursuant to the provisions of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"). The Company is constituted as an umbrella fund insofar as its share capital is divided into different series of shares with each series of shares representing a separate investment portfolio of assets (each a "Portfolio"). Shares of any Portfolio may be divided into different classes to accommodate different subscription and/or redemption provisions and/or dividend and/or charges and/or fee arrangements and/or currencies including different total expense ratios. As detailed in the "Management and Administration" section of the Prospectus, the Directors have appointed Neuberger Berman Asset Management Ireland Limited ("NBAMIL") on 1 July 2021 as the Manager to provide the day to day management of the business affairs of the Company in accordance with the requirements of the Central Bank.

At 31 December 2025, the Company was comprised of forty-five separate portfolios of investments ("Portfolios"), each of which is represented by a multiple series of Redeemable Participating Shares. These are set out in the table below:

Portfolio	**Launch Date***	**SFDR^ Category****

^Sustainable Finance Disclosure Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability related disclosures in the financial services sector ("SFDR").

^^The Portfolio is not classified as an ESG fund in Hong Kong pursuant to the "Circular to management companies of SFC-authorized unit trusts and mutual funds– ESG funds" issued by the SFC dated 29 June 2021, as may be revised from time to time.

**Please refer to Appendix VIII for a details of SFDR.

[1] Portfolio authorised by the Hong Kong Securities and Futures Commission (the "SFC") and hence may be offered to the public of Hong Kong.
[2] Portfolio not authorised by the SFC and not available to Hong Kong investors.

The Company has segregated liability between its Portfolios and accordingly any liability incurred on behalf of or attributable to any Portfolio shall be discharged solely out of the assets of that Portfolio.

Neuberger Berman China Bond Fund (or "China Bond"), Neuberger Berman InnovAsia Fund (or "InnovAsia"), Neuberger Berman Sustainable Asia High Yield Fund (or "Sustainable Asia High Yield"), Neuberger Berman European Sustainable Equity Fund (or "European Sustainable Equity") and Neuberger Berman Global Sustainable Equity Fund (or "Global Sustainable Equity") liquidated on 28 March 2025, 30 September 2025, 1 December 2025 and 17 December 2025 (liquidation date for both European Sustainable Equity and Global Sustainable Equity), respectively, and are therefore no longer available for subscription. Neuberger Berman Absolute Return Multi Strategy Fund, Neuberger Berman Emerging Markets Select Equity Fund, Neuberger Berman Global Diversified Income FMP – 2024, Neuberger Berman Global High Yield Sustainable Action Fund, Neuberger Berman Global Real Estate Securities Fund, Neuberger Berman Macro Opportunities FX Fund, Neuberger Berman Multi-Asset Income Fund and Neuberger Berman Uncorrelated Trading Fund liquidated during the prior reporting years and are therefore no longer available for subscription.

Please refer to Appendix VII for a full list of the Managers, Sub-Investment Managers and Sub-Advisers for each Portfolio.

Please refer to Appendix VIII for details of Sustainable Finance Disclosure Regulation.

Investment objectives and list of active share classes of the Portfolios that were available for investment as at 31 December 2025 are as follows:

General Information (Continued)

Asia Responsible Transition Bond

The investment objective of Asia Responsible Transition Bond (the "Portfolio") is to achieve a target average return of 1-1.25% over the benchmark (the J.P. Morgan Asian Credit Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by primarily investing in hard currency-denominated debt issued in Asian countries.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued by governments of, government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in Asian countries and which are denominated in hard currency. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end (referred to herein as the "year end" or "year ended"):

Share Class Name	*Share Class Launch Date*	*Currency*
USD A (Monthly) Distributing Class[1]	30 June 2015	USD
USD A Accumulating Class[1]	30 June 2015	USD
USD I Accumulating Class	30 June 2015	USD
USD I Distributing Class	30 June 2015	USD
USD I4 (Monthly) Distributing Class	23 September 2022	USD
USD I4 Accumulating Class	23 September 2022	USD
USD M Accumulating Class	14 August 2019	USD
USD X (Monthly) Distributing Class	23 September 2022	USD
USD X Accumulating Class	8 June 2021	USD
USD Z Accumulating Class	12 December 2022	USD

[1]Authorised for public distribution in Hong Kong.

China A-Share Equity

The investment objective of China A-Share Equity (the "Portfolio") is to achieve long-term capital appreciation primarily through investment in a portfolio of China A Share equity holdings that provide exposure to economic development in the People's Republic of China (the "PRC").

The Portfolio seeks to achieve its investment objective by investing directly in China A Shares through the Stock Connects and through the Quota, and indirectly, mainly through investments in equity-linked securities issued by international investment banks and also through equity and debt securities which may be issued by entities which are managed by affiliates of the Sub-Investment Manager.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
CNY I Accumulating Class	28 July 2020	CNY
USD I Accumulating Unhedged Class	28 July 2020	USD
USD I Distributing Unhedged Class	28 July 2020	USD

General Information (Continued)

China Equity

The investment objective of China Equity (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the Greater China equity market. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets and issued by companies that:

- are incorporated or organised under the laws of, or that have a principal office in, the People's Republic of China ("PRC"), Hong Kong Special Administrative Region ("SAR"), Macau SAR or Taiwan (the "Greater China Region");
- generally derive a majority of their total revenue or profits from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in the Greater China Region; or
- generally hold a majority of their assets in the Greater China Region (each a "Greater China Company").

The Portfolio may also invest in hybrid securities and equity-related securities, such as convertible debentures, convertible preferred stock, debt instruments with warrants attached, including financial derivative instruments ("FDI"), which are issued by or give exposure to the performance of Greater China Companies.

For the avoidance of doubt, the Portfolio may invest in securities as described herein and which are issued by or giving exposure to Greater China Companies listed or traded on recognised markets located outside of the Greater China Region, including, without limitation, in the United States, the United Kingdom, Singapore and Japan.

The Portfolio invests primarily in mid and large capitalisation companies.

Green Court Capital Management Limited, the Non-Affiliated Sub-Adviser, employs a research intensive, fundamental-driven and bottom-up approach. Ongoing assessments of macroeconomic and market factors augment the stock-picking discipline. The investment approach is discretionary in nature and is designed to consider multiple drivers and investment strategies over different time horizons.

The Portfolio is primarily constructed by taking under and overweight positions to the market benchmark MSCI China Index. Decisions on whether the Portfolio's positions will be under or overweight relative to the benchmark are primarily driven by valuation, quality of valuation and macroeconomic factors, including such variables as opportunities for growth, competitive advantages and risk characteristics, over short-, medium- and long-term investment horizons but the requirements of the Central Bank in respect of concentration limits as set out in the "Investment Restrictions" section of the Prospectus will supersede these factors where relevant.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
CHF I Accumulating Class	31 July 2015	CHF
EUR A Accumulating Class[1]	14 July 2009	EUR

USD U Accumulating Class	27 June 2014	USD
USD Z Accumulating Class	1 August 2014	USD

[1]Authorised for public distribution in Hong Kong.

General Information (Continued)

Climate Innovation

The investment objective of Climate Innovation (the "Portfolio") is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
USD A Accumulating Class	1 August 2023	USD
USD I Accumulating Class	1 August 2023	USD
USD I5 Accumulating Class	1 August 2023	USD
USD Z Accumulating Class	1 August 2023	USD

CLO Income

The investment objective of CLO Income (the "Portfolio") is to achieve a target average return of 4-5% over the benchmark (the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD)) before fees over a market cycle (typically 3 years or over) by investing primarily in USD and EUR denominated floating rate collateralised loan obligations ("CLO") mezzanine debt securities and also in US high yield debt securities which are listed or traded on recognised markets.

The Portfolio seeks to achieve its objective through a disciplined investment process, which seeks to identify CLO mezzanine debt securities which are backed by an underlying portfolio of loans with a higher portfolio score.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR A Accumulating Class	9 June 2022	EUR
EUR I Accumulating Class	12 July 2018	EUR

General Information (Continued)

Commodities

The investment objective of Commodities (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by seeking exposure to a broad range of commodities.

The Portfolio seeks to achieve its objective by seeking exposure to a broad range of commodities groups, including energy, precious metals, industrials metals, livestock, softs and agriculture.

The Portfolio will seek to obtain this exposure through a blend of investments including, primarily, investment in commodity-related financial derivative instruments ("FDI"); direct investment in the equities and equity-related securities (namely, common and preferred stock, ADRs and GDRs) of commodity-related companies. The Portfolio may also seek to achieve exposure to commodities by investing in units or shares of collective investment schemes, including exchange traded funds ("ETFs") and other Portfolios of the Company, where such investment provides commodity exposure consistent with the investment policy of the Portfolio.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR I3 Accumulating Unhedged Class	1 October 2025	EUR
GBP I Accumulating Unhedged Class	14 December 2022	GBP

USD I5 Accumulating Class	4 March 2022	USD
USD M Accumulating Class	14 April 2022	USD
USD Z Accumulating Class	15 February 2022	USD

Corporate Hybrid Bond

The investment objective of Corporate Hybrid Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation).

The Portfolio seeks to achieve its objective by investing primarily in investment grade and sub-investment grade corporate hybrid bonds. The Portfolio seeks to use fundamental bottom-up analysis principles in selecting securities for investment, meaning that the analysis done by the Sub Investment Managers will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries.

The analysis of the strength of a security is specific to the individual security itself, as opposed to having regard to broader themes e.g. the credit rating of the security is analysed relative to its proposed yield. The Portfolio focuses on securities which are listed or traded on recognised markets globally, and not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities. The Portfolio may have medium levels of volatility due to its investments in subordinated debt and/or below investment grade securities.

Developed Market FMP – 2027

The investment objective of Developed Market FMP – 2027 (the "Portfolio") is to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide.

Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency or may also be unrated.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*

EMD Corporate – Social and Environmental Transition

The investment objective of EMD Corporate – Social and Environmental Transition (the "Portfolio") is to achieve a target average return of 1-2% over the benchmark (the J.P. Morgan ESG CEMBI Diversified Index) before fees over a market cycle (typically 3 years) and to have a positive social and environmental impact by investing primarily in corporate debt issued in emerging market countries that comply with the Neuberger Berman Sustainable Exclusion Policy.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries, which may be denominated in Hard Currency or the currencies of such emerging market countries. For the purposes of the Portfolio, "Hard Currency" is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

Emerging Market Debt – Hard Currency

The investment objective of Emerging Market Debt – Hard Currency (the "Portfolio") is to achieve a target average return of 1- 2% over the benchmark (the J.P. Morgan EMBI Global Diversified Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing primarily in hard currency-denominated debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency. For the purposes of the Portfolio, "Hard Currency" is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

General Information (Continued)

Emerging Markets Equity

The investment objective of Emerging Markets Equity (the "Portfolio") is to achieve long-term capital growth. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets globally and issued by companies that:

- trade principally on a recognised stock exchange in emerging market countries;
- are organised under the laws of and have a principal office in emerging market countries; or
- derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in emerging market countries. The Portfolio may also invest in other collective investment schemes, which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value.

Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") uses a fundamental bottom-up, research-driven securities selection approach focusing on high return businesses while factoring in economic, legislative and business developments to identify countries and economic sectors (such as Energy, Financials, Health Care, Telecommunication Services and Utilities) that it believes may be particularly attractive.

The Sub-Investment Manager seeks to invest in companies that it believes have sustainable free cash flow growth and are trading at attractive valuations. The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies, and it generally intends to remain diversified across countries and geographical regions.

General Information (Continued)

Euro Bond

The investment objective of Euro Bond (the "Portfolio") is to outperform the benchmark (specified as the Bloomberg Euro Aggregate Index, Total Return, Hedged, EUR) before fees over a market cycle (typically 3 years) by investing in a diversified mix of Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR A Accumulating Class	19 September 2024	EUR
EUR I Accumulating Class	14 November 2018	EUR

EUR X Accumulating Class	1 April 2025	EUR
EUR Z Accumulating Class	12 April 2024	EUR

Euro Bond Absolute Return

The investment objective of Euro Bond Absolute Return (the "Portfolio") is to generate positive absolute returns over a market cycle (typically 3-5 years), irrespective of market conditions with a moderate level of volatility. It aims to achieve this by implementing an unconstrained strategy combining long and synthetic short positions in a diversified portfolio of predominantly Euro-denominated debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

General Information (Continued)

European High Yield Bond

The investment objective of European High Yield Bond (the "Portfolio") is to maximise current income whilst preserving capital by investing in the European high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in corporate high yield fixed income securities, which are (i) denominated in a European currency or (ii) issued or guaranteed by companies of any industrial sector that are domiciled in, or exercise the main part of their economic activity in a European country that are listed, dealt or traded on recognised markets.

The following are the active share classes in the Portfolio at year end:

Event Driven

The investment objective of Event Driven (the "Portfolio") is to generate positive market neutral, absolute risk adjusted returns with low correlation to broader equity markets through utilising event driven strategies.

The Portfolio seeks to achieve its investment objective by taking both long and synthetic short positions in global equity securities utilising event driven strategies. Event driven strategies are based on announced or anticipated events or a series of events and on investing in the securities of companies that could be affected by the occurrence of such events. The Portfolio will take exposure to equity securities that are listed or traded on recognised markets in developed markets, and that are subject to or expected to be subject to corporate events including and not limited to mergers, takeover bids, exchange offers, tender offers, spin-offs, proxy fights, liquidations, recapitalisations, corporate restructurings, litigation, legislation or regulatory events, or post-bankruptcy situations. The Portfolio will take long positions in respect of equity securities that it expects to increase in value as a result of such events and take synthetic short positions in respect of equity securities that it expects to decrease in value as a result of such events.

Global Bond

The investment objective of Global Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from global fixed income markets.

The Portfolio seeks to achieve this objective by investing primarily in:

- Investment grade debt securities issued by governments and agencies from Organisation for Economic Co-operation and Development ("OECD") countries; and
- Investment grade debt securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries.

All securities will be listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

There are four main differentiating factors that set the Portfolio's approach:

- Diversification through the use of multiple uncorrelated alpha sources;
- Active FX management;
- Integrated Global Macro Overlay; and
- Proprietary risk management systems.

In addition, the Manager and the Sub-Investment Manager conduct analysis of data and seeks to exploit opportunities across multiple time horizons. Central to the investment philosophy is the Manager's and the Sub-Investment Manager's qualitative judgment, which is exercised at all stages of the investment process. This discretion enables it to take into account information and events that cannot be readily quantified, for example political events, shifts in regulatory regimes or the effects of market positioning and hedging.

Global Equity Megatrends

The investment objective of Global Equity Megatrends (the "Portfolio") is to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes.

The Portfolio seeks to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*

Global Flexible Credit Income

The investment objective of Global Flexible Credit Income (the "Portfolio") is to maximise total return from current income and long-term capital appreciation by investing in a diversified mix of global fixed rate and floating rate debt securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
CAD I5 Accumulating Class	18 March 2021	CAD

General Information (Continued)

Global High Yield Engagement

The investment objective of Global High Yield Engagement (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the global high yield fixed income market by investing in securities in the global high yield fixed income market that produce investment returns and support better alignment with the United Nations Sustainable Development Goals by engaging with issuers in support of achieving the United Nations Sustainable Development Goals.

The Portfolio seeks to achieve its objective by investing primarily in:

- US dollar and non-US dollar denominated *high* yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector; and
- short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US dollars located throughout the world that are listed, dealt or traded on recognised markets.

The Portfolio will invest primarily in securities denominated in the currencies included in the BofA Merrill Lynch Global High Yield Constrained Index (USD Hedged Total Return).

In addition, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
AUD I Distributing Class	3 May 2022	AUD
AUD I4 Accumulating Class	12 February 2024	AUD
CHF I4 Accumulating Class	3 May 2022	CHF

USD M Distributing Class	29 January 2018	USD
USD X Accumulating Class	10 November 2020	USD
USD Z Accumulating Class	4 August 2016	USD

Global Investment Grade Credit

The investment objective of Global Investment Grade Credit (the "Portfolio") is to achieve a target average return of 1% over the Benchmark (Bloomberg Barclays Global Aggregate Corporate Index (Total Return, Hedged USD)) before fees over a market cycle (typically 3 years) from investing primarily in investment grade corporate fixed income securities globally.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

General Information (Continued)

Global Investment Grade Credit (continued)

The Portfolio will invest primarily in investment grade fixed income securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries. The Portfolio will seek to use fundamental, bottom-up analysis principles in selecting securities for investment, meaning that the Manager's and the Sub-Investment Manager's analysis will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. For example the credit rating of the security will be analysed relative to its proposed yield and the characteristics of the security will be analysed to determine cash flow predictability, using such factors including the issuer's cash flow profile, debt and leverage.

The Portfolio will focus on securities which are listed or traded on recognised markets globally, and is not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR I Accumulating Class	27 July 2023	EUR
EUR X Accumulating Class	19 March 2025	EUR
GBP P Distributing Class	25 July 2024	GBP

GBP X Distributing Class	6 September 2024	GBP
USD I Accumulating Class	1 September 2021	USD
USD X Accumulating Class	1 September 2021	USD
USD Z Accumulating Class	1 September 2021	USD

Global Opportunistic Bond

The investment objective of Global Opportunistic Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities globally under varying market environments with a focus on downside protection.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments issued by governments and their agencies and corporations worldwide. Securities will be listed, dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency. On an ancillary basis, the Portfolio may hold preferred stocks issued by public or corporate issuers.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR I Accumulating Class	27 November 2020	EUR

USD I2 Accumulating Class	23 April 2018	USD
USD I2 Distributing Class	24 October 2024	USD
USD Z Accumulating Class	16 May 2019	USD

General Information (Continued)

Global Value

The investment objective of Global Value (the "Portfolio") is to achieve long term capital growth from investing primarily in a portfolio of global equity holdings that comply with the Sustainable Criteria (as this term is defined within the "Sustainable Investment Criteria" section of the Prospectus).

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on recognised markets globally (which may include emerging market countries).

Research identifies investment themes (i.e. characteristics of stocks that are believed to be systematically linked to the generation of better than average returns). Investment themes are used to assess the characteristics of security issuers and drive stock selection. Themes include, but are not limited to, the valuation, earnings quality, price dynamics and sentiment of each issue.

The following are the active share classes in the Portfolio at year end:

Share Class Name	*Share Class Launch Date*	*Currency*
EUR M Accumulating Class	29 January 2016	EUR

USD I Accumulating Class	18 December 2014	USD
USD I3 Accumulating Class	12 February 2025	USD
USD Z Accumulating Class	24 May 2016	USD

High Yield Bond

The investment objective of High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market. The Portfolio seeks to achieve this objective by investing primarily in:

- high yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars, that are listed, dealt or traded on recognised markets.

In addition, although the Portfolio concentrates its investments in the US, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

Japan Equity Engagement

The investment objective of Japan Equity Engagement (the "Portfolio") is to achieve a target average return of 3% over the MSCI Japan Small Cap Net Index before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective by primarily investing in equity securities issued by small and mid capitalisation companies which have either their head office or exercise an overriding part of their economic activity in Japan and that are listed or traded on recognised markets globally.

The following are the active share classes in the Portfolio at year end:

Next Generation Connectivity

The investment objective of Next Generation Connectivity (the "Portfolio") is to achieve a target average return of 3-5% over the MSCI All-Country World Index before fees over a market cycle (typically 3 years) from investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from the development and enhancement of next generation connectivity.

The Portfolio seeks to achieve its investment objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

Short Duration Emerging Market Debt

The investment objective of Short Duration Emerging Market Debt (the "Portfolio") is to achieve a target average return of 3% over cash (the ICE BofA US 3-Month Treasury Bill Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing in a diversified selection of hard-currency-denominated short duration sovereign and corporate debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in short duration debt securities and money market instruments issued by public or corporate issuers which have their head office, or exercise an overriding part of their economic activity, in emerging market countries and which are denominated in hard-currency. Investors should also note that corporate issuers that are, either directly or indirectly, 100% government-owned are considered to be public issuers. With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector or region.

Investments in securities issued by companies located in, and governments and government agencies of, emerging markets countries may involve additional risk, relative to investments in more developed economies.

Short Duration Euro Bond

The investment objective of Short Duration Euro Bond (the "Portfolio") is to achieve an attractive level of outperformance over the Euro cash return over a period of 1 year irrespective of the market environment by taking exposure to a diversified mix of short-term Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

General Information (Continued)

Short Duration High Yield Engagement

The investment objective of Short Duration High Yield Engagement (the "Portfolio") is to generate high current income by investing in short-duration high yield fixed income securities that comply with the terms of the Neuberger Berman Sustainable Exclusion Policy and seek to produce investment returns, support better-functioning capital markets, and have a positive social and environmental impact.

The Portfolio seeks to achieve this objective by investing primarily in short duration high yield bonds issued by:

- US and non-US corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- governments and agencies in the US that are primarily denominated in US dollars that are listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

In addition, although the Portfolio will concentrate its investments in the US or other Organisation for Economic Co-operation and Development ("OECD") countries, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

Strategic Income

The investment objective of Strategic Income (the "Portfolio") is to maximise total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments with a focus on downside protection.

The Portfolio seeks to achieve this objective by investing primarily in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on recognised markets and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

General Information (Continued)

Sustainable Emerging Market Debt - Hard Currency

The investment objective of Sustainable Emerging Market Debt - Hard Currency (the "Portfolio") is to outperform the Benchmark (JPMorgan ESG EMBI Global Diversified Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing primarily in Hard Currency-denominated debt securities issued in emerging market countries that comply with the Sustainable Investment Criteria, as defined in the Prospectus.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency and which are consistent with the Portfolio's sustainability objective. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end:

Tactical Macro

The investment objective of Tactical Macro (the "Portfolio") is to achieve positive returns regardless of the market environment by identifying market pricing imbalances across a broad range of asset classes, markets and regions in a highly risk-managed framework.

The Portfolio seeks to achieve this objective by identifying key aspects of the macro environment to develop a universe of investment theses, based on the Sub-Investment Manager's analysis of key aspects of the macro environment which are considered in order to select investments.

The following are the active share classes in the Portfolio at year end:

General Information (Continued)

Uncorrelated Strategies

The investment objective of Uncorrelated Strategies (the "Portfolio") is to seek capital appreciation with an emphasis on absolute returns from a diversified portfolio of uncorrelated investment strategies.

The Portfolio seeks to achieve its objective by allocating its assets to fully discretionary investment advisers, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

The following are the active share classes in the Portfolio at year end:

US Equity

The investment objective of US Equity (the "Portfolio") is to achieve long term capital appreciation.

The Portfolio seeks to achieve its objective principally by taking long positions in equity and equity-linked securities, listed or traded on recognised markets in the US. The Portfolio may also but to a lesser extent take long positions in equity and equity-linked securities which are listed or traded on recognised markets located in the countries which comprise the MSCI All Country World Index (which may include emerging market countries).

US Equity Premium

The Investment objective of US Equity Premium (the "Portfolio") is to seek long term growth of capital and income generation.

The Portfolio seeks to achieve its goal primarily through a strategy of writing collateralised put options on global equity indices and exchanged traded funds ("ETFs") providing exposure to US equity indices, such as the S&P 500 and Russell 2000. The put options will be traded on recognised markets.

US Long Short Equity

The investment objective of US Long Short Equity (the "Portfolio") is to seek long term capital appreciation with a secondary objective of principal preservation.

The Portfolio seeks to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities, including Exchange Traded Funds ("ETFs") listed or traded in US equity markets. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on recognised markets located in the countries comprising the MSCI All Country World Index (which may include emerging market countries).

Investments generally include those companies across all industrial sectors with a market capitalisation of at least USD 250 million measured at the time of initial investment.

The following are the active share classes in the Portfolio at year end:

US Multi Cap Opportunities

The investment objective of US Multi Cap Opportunities (the "Portfolio") is to achieve capital growth through the selection of investments using systematic, sequential research. The Portfolio seeks to achieve this objective by Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") using systematic, sequential research in identifying potential investments. Investment selection is the result of both quantitative and qualitative analysis in an effort to identify companies that are believed to have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases and improved capital structure management.

US Real Estate Securities

The investment objective of US Real Estate Securities (the "Portfolio") is to achieve total return through investments in real estate securities, emphasising both capital appreciation and current income. The Portfolio seeks to achieve this objective by investing in a concentrated portfolio principally in securities (including convertible bonds) issued by real estate investment trusts ("REITs"). It should be noted that the Portfolio does not acquire any real estate directly.

General Information (Continued)

US Small Cap

The investment objective of US Small Cap (the "Portfolio") is to achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors. The Portfolio seeks to achieve this objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets.

The Portfolio seeks to identify undervalued companies whose current market share and balance sheet are strong and whose financial strength is largely based on existing business lines rather than on projected growth.

Factors in identifying such companies include:

- above-average returns;
- an established market niche;
- circumstances that may make it difficult for new competitors to enter the market;
- an ability to finance their own growth; and
- sound future business prospects.

The following are the active share classes in the Portfolio at year end:

Directors' Report

The Directors present herewith their annual report and audited financial statements for Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2025 and comparatives for the year ended 31 December 2024.

Statement of Directors' Responsibilities

The Directors are responsible for preparing the annual report and the financial statements in accordance with applicable Irish Law and Generally Accepted Accounting Practice in Ireland including the Financial Reporting Standards ("FRS") 102: 'The financial reporting standard applicable in the UK and Republic of Ireland' issued by the Financial Reporting Council and published by the Chartered Accountants Ireland.

Under Irish law, the Directors shall not approve the financial statements unless they are satisfied that they give a true and fair view of the Company's assets, liabilities and financial position as at the end of the financial year and the profit or loss of the Company for the financial year.

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question, subject to any material departures from those standards being disclosed and explained in the notes to the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to:

- correctly record and explain the transactions of the Company;
- enable, at any time, the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; and
- enable the Directors to ensure that the financial statements comply with Financial Reporting Standard ("FRS") 102: The financial reporting standard applicable in the UK and Republic of Ireland, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"), Irish statute comprising the Companies Act 2014 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48 (1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations") and enable those financial statements to be audited.

The Directors are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Under the UCITS Regulations, the Directors are required to entrust the assets of the Company to a depositary for safe-keeping. In carrying out this duty, the Company has declared custody of the Company's assets to Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary").

Relevant Audit Information Statement

The Directors in office at the date of this report have each confirmed that:

- as far as he/she is aware, there is no relevant audit information of which the Company's auditor is unaware; and
- he/she has taken all the steps that he/she ought to have taken as a Director in order to make himself/herself aware of any relevant audit information and to establish that the Company's auditor is aware of that information.

Directors' Compliance Statement

It is the policy of the Company to comply with its relevant obligations (as defined in the Companies Act 2014 (as amended)). As required by Section 225(2) of the Companies Act 2014 (as amended), the Directors acknowledge that they are responsible for securing the Company's compliance with the relevant obligations. The Directors have drawn up a compliance policy statement as defined in Section 225(3)(a) of the Companies Act 2014 (as amended) and a compliance policy which refers to the arrangements and structures that are in place and which are, in the Directors' opinion, designed to secure material compliance with the Company's relevant obligations. In discharging their responsibilities under Section 225, the Directors relied upon, among other things, the services provided, advice and/or representations from third parties whom the Directors believe have the requisite knowledge and experience in order to secure material compliance with the Company's relevant obligations.

Directors' Report (Continued)

Accounting records

The Directors are responsible for ensuring that adequate accounting records as outlined in Section 281 of the Companies Act 2014 (as amended) are maintained by the Company. To achieve this, the Directors have appointed a service organisation Brown Brothers Harriman Fund Administration Services (Ireland) Limited (the "Administrator"). The Company's accounting records are retained at the Administrator's office at 30 Herbert Street, Dublin 2.

Principal Activities and Review of Business

The Company is an investment company with variable capital incorporated in Ireland on 11 December 2000 as a public limited company. The Company was authorised by the Central Bank as an Undertaking for Collective Investment in Transferable Securities pursuant to the UCITS Regulations. The objective of the Company is the collective investment in transferable securities and other liquid financial assets of capital raised from the public, operating on the principle of risk spreading in accordance with the UCITS Regulations.

The Company is structured as an umbrella fund with segregated liability between Portfolios in that the Directors may from time to time with the prior approval of the Central Bank, issue different series of shares representing separate Portfolios. The assets of each Portfolio are invested in accordance with the investment objectives applicable to such Portfolio as outlined in the general information section of these Financial Statements. Each Portfolio bears its own liabilities and none of the Company, any of the service providers appointed to the Company, the Directors, any receiver, examiner or liquidator, nor any other person will have access to the assets of a Portfolio in satisfaction of a liability of any other Portfolio.

As at 31 December 2025 forty-five constituent Portfolios were in existence, which are listed in the General Information section of this Annual Report.

Results for the Year and Assets, Liabilities and Financial Position at 31 December 2025

A detailed review of the year and factors which contributed to the performance for the year is included in the Investment Manager's reports. Details of the assets, liabilities and financial position of the Company and results for the year ended 31 December 2025 are set out in the Balance Sheet and Profit and Loss Account for each Portfolio.

Directors

The names and nationalities of the persons who served as Directors at any time during the year ended 31 December 2024 are set out below:

Gráinne Alexander**	Irish
Michelle Green*	British
Naomi Daly***	Irish
Mary Brady* (appointed on 3 February 2025)	Irish

*Non-Executive Director
**Independent, Non-Executive Director
***Independent, Non-Executive Director and Chairperson

Directors' and Secretary's Interests

As at 31 December 2025, Ms. Michelle Green is a Director and employee of Neuberger Berman Europe Limited ("NBEL"), a Sub-Investment Manager and a Distributor of the Company. Ms. Mary Brady is a Director and employee of Neuberger Berman Asset Management Ireland Limited ("NBAMIL"), the Manager of the Company. Ms. Gráinne Alexander is a Director of NBAMIL.

None of the Directors, the Company Secretary, or their families holds or held any beneficial interests in the Company at 31 December 2025 or during the year (2024: Nil).

Transactions Involving Directors

There are no contracts or arrangements of any significance in relation to the business of the Company in which the Directors or the Company Secretary had any interest as defined in the Companies Act 2014 (as amended) at any time during the year ended 31 December 2025 other than those disclosed in note 10 of these Financial Statements.

Directors' Report (Continued)

Transactions Involving Directors (continued)

Connected Persons
In accordance with the Central Bank's UCITS Regulation 43(1), any transaction carried out with the Company by the Manager, the Depositary, the Investment Adviser and/or associated or group companies of these entities ("connected persons") must be carried out as if negotiated at arm's length. Such transactions must be in the best interest of the shareholders of the Company.

The Board of Directors of the Company (the "Board") is satisfied that (i) there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out above are applied to all transactions with connected parties; and (ii) transactions with connected parties entered into during the period complied with these obligations.

Political Donations

There were no political donations made during the year ended 31 December 2025 (2024: Nil).

Risk Management Objectives and Policies

Each Portfolio is invested in accordance with the investment objectives and policies applicable to the Portfolio as set out in detail in the Prospectus. Investment in each Portfolio carries with it a degree of risk including, but not limited to, the risks referred to in note 12 of these Financial Statements.

Dividends and Retention

The dividend distributions declared and paid during the year are disclosed in the Profit and Loss Account under Finance Costs.

Future Developments

The Company will continue to pursue its investment objective as set out in the Directors' Report.

Going Concern

The Company will continue in business and the financial statements have been prepared on a going concern basis.

Other Matters

During 2025 and into 2026, financial market conditions continued to be subject to significant fluctuations in market volatility, including but not limited to, interest rates, foreign exchange, equity prices, commodity prices, credit spreads, implied volatilities and asset correlations. 2025 was characterised by elevated policy-driven uncertainty, most notably arising from the trade tariff agenda of the US administration, including the imposition of broad-based import duties, the so-called "Liberation Day" tariffs announced in April 2025, which triggered sharp movements across equity markets, bond yields, oil prices and currency markets. Market leadership also shifted during the year, with international equities broadly outperforming US equities, supported by relative valuation and US dollar depreciation. Monetary policy divergence across major currency blocs remained a key market driver throughout 2025. The US Federal Reserve resumed a cautious easing cycle, initiating rate cuts in the second half of the year against a backdrop of sticky inflation influenced by tariff pass-through effects. The European Central Bank also continued its easing path, while central banks in emerging markets navigated varying inflation and currency pressures. These diverging trajectories will continue to be closely monitored given their material importance for bond prices and exchange rates. Geopolitical risks persisted across multiple theatres. The Russia-Ukraine conflict continued to weigh on global energy markets and commodity prices, with Russian oil export revenues declining materially by mid-2025. Tensions in the Middle East escalated materially into 2026, with coordinated US-Israeli military strikes on Iranian military and nuclear infrastructure triggering retaliatory missile and drone attacks across Gulf regional installations, raising significant concerns around energy supply disruption given Iran's proximity to the Strait of Hormuz. These developments carry ongoing implications for commodity pricing, emerging market credit spreads and broader risk sentiment, and the Company continues to actively monitor their potential impact on the Portfolios it manages.

Audit Committee

The Company has an established audit committee. Ms. Gráinne Alexander, Ms. Naomi Daly and Ms. Mary Brady are members of the Board of Directors of the Company and are part of the audit committee. Additionally, Mr. John M. McGovern, an employee of Neuberger Berman LLC, is a member of the audit committee.

Significant Events During the Year

Significant events during the year are set out in note 21 of these Financial Statements.

Directors' Report (Continued)

Significant Events Since the Year End

Significant events since the year end are set out in note 22 of these Financial Statements.

Independent Auditors

The Directors appointed the Independent Auditors, Ernst & Young, Chartered Accountants, in 2000 to audit the financial statements for the year ended 31 December 2001 and subsequent financial periods.

The Independent Auditors have indicated their willingness to continue in office in accordance with Section 383(2) of the Companies Act 2014 (as amended).

Corporate Governance

The Company is subject to and complies with Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations. The Company does not apply additional requirements in addition to those required by the above. Each of the service providers engaged by the Company is subject to their own corporate governance requirements.

Financial Reporting Process - Description of Main Features
The Directors are responsible for establishing and maintaining adequate internal control and risk management systems of the Company in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of failure to achieve the Company's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Directors have established processes regarding internal control and risk management systems to ensure its effective oversight of the financial reporting process. These include appointing the Administrator to maintain the accounting records of the Company independently of the Manager and the Depositary. The Administrator is required under the terms of the administration agreement to maintain adequate accounting records on behalf of the Company. To that end the Administrator performs regular reconciliations of its records to those of the Depositary. The Administrator is also contractually obliged to prepare for review and approval by the Directors the annual report including financial statements intended to give a true and fair view and the interim report and unaudited abridged financial statements.

The Directors evaluate and discuss significant accounting and reporting issues as the need arises. From time to time the Directors also examine and evaluate the Administrator's financial accounting and reporting routines and monitor and evaluate the external auditors' performance, qualifications and independence. The Administrator has operating responsibility in respect of its internal controls in relation to the financial reporting process and the Administrator's report to the Directors.

Risk Assessment
The Directors are responsible for assessing the risk of irregularities whether caused by fraud or error in financial reporting and ensuring the processes are in place for the timely identification of internal and external matters with a potential effect on financial reporting. The Directors have also put in place processes to identify changes in accounting rules and recommendations and to ensure that these changes are accurately reflected in the Company's financial statements.

The Manager completes in depth reviews of the Financial Statements to ensure that all of the content included is accurate. Should a discrepancy be identified, the Manager would report this to the Board of Directors at the next board meeting, or immediately where the discrepancy is deemed material. Changes in accounting rules and standards are monitored by the Manager and the Company's Administrator; all changes are reported to the Board periodically.

The Manager liaises with the Company's Administrator to ensure that all changes in accounting rules and standards are reflected in the financial statements in a timely manner. The Manager also has regular dialogue with the Company's Auditors.

Control Activities
The Administrator maintains control structures to manage the risks over financial reporting. These control structures include appropriate division of responsibilities and specific control activities aimed at detecting or preventing the risk of significant deficiencies in financial reporting for every significant account in the financial statements and the related notes in the Company's annual report. Examples of control activities exercised by the Administrator include analytical review procedures, reconciliations and automatic controls in IT systems. Prices not available from independent sources are typically valued by the Manager using methods the Directors have approved in the good-faith belief that the resulting valuation will reflect the fair value of the security.

Directors' Report (Continued)

Corporate Governance (continued)

Diversity
With respect to diversity, the Company has no employees and the only individuals engaged directly by it are the Directors. When there is a vacancy on the Board, the objective is to ensure that the Board is diversified with an appropriate mix as regards age, gender, race and educational/professional backgrounds, while achieving compliance by all individuals with regulatory requirements and an overall composition with the requisite experience and skills.

Information and Communication
The Company's policies and the Directors' instructions with relevance for financial reporting are updated and communicated via appropriate channels, such as e-mail, correspondence, telephone and meetings to ensure that all financial reporting information requirements are met in a complete and accurate manner.

Monitoring
The Directors receive regular presentations and review reports from the Depositary, Manager and Administrator. The Directors also have an annual process to ensure that appropriate measures are taken to consider and address the shortcomings identified and measures recommended by the independent auditors.

Capital Structure
No person has a significant direct or indirect holding of securities in the Company. No person has any special rights of control over the Company's share capital. There are no restrictions on voting rights. With regard to the appointment and replacement of Directors, the Company is governed by its Articles of Association, Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations as applicable to investment funds. The Articles of Association themselves may be amended by special resolution of the Shareholders.

Powers of the Directors
The Directors are responsible for managing the business affairs of the Company in accordance with the Articles of Association. The Directors may delegate certain functions to the Administrator and other parties, subject to the supervision and direction by the Directors. The Directors have appointed the Manager to provide the day to day management of the Company's business affairs and have for this purpose delegated certain of their duties and powers to the Manager. The Directors will receive periodic reports from the Manager detailing, inter alia, its review of the performance of the Company and the Portfolios and providing an analysis of their respective investment portfolios. The Manager will also provide such other information as may from time to time be reasonably required by the Directors for the purposes of such meetings. The Directors have appointed the Depositary in respect of the safekeeping of the Company's assets. Consequently, none of the Directors is an executive Director.

The Articles of Association provide that the Directors may exercise all the powers of the Company to borrow money, to mortgage or charge its undertaking, property or any part thereof and may delegate these powers to the Manager.

Shareholder Meetings
The Annual General Meeting of the Company will be held in Ireland, normally during the month of June or such other date as the Directors may determine. Notice convening the Annual General Meeting in each year at which the audited financial statements of the Company will be presented (together with the Directors' and Auditors' Reports of the Company) will be sent to Shareholders at their registered addresses not less than twenty one clear days before the date fixed for the meeting. Other general meetings may be convened from time to time by the Directors in such manner as provided by Irish law.

Each of the shares entitles the holder to attend and vote at meetings of the Company and of the Portfolio represented by those shares. All votes shall be cast by a poll of Shareholders present in person or by proxy at the relevant Shareholder meeting or by unanimous written resolution of the Shareholders. No class of shares confers on the holder thereof any preferential or pre-emptive rights or any rights to participate in the profits of any other share class or any voting rights in relation to matters relating solely to any other share class.

Any resolution to alter the class rights of the shares requires the approval of three-fourths of the holders of the shares represented or present and voting at a general meeting of the class. The quorum for any general meeting of the class convened to consider any alteration to the class rights of the shares shall be present in person or by proxy two or more persons holding shares issued in that class. In the event that a quorum is not present at a meeting and the meeting is adjourned, the quorum for the adjourned meeting shall be one Shareholder present in proxy or person.

Directors' Report (Continued)

Corporate Governance (continued)

Shareholder Meetings (continued)
Each of the shares other than subscriber shares entitle the Shareholder to participate equally (subject to any differences between fees, charges and expenses applicable to different classes of shares) on a pro-rata basis in the profits and net assets of the Portfolio in respect of which the shares have been issued, save in the case of profits declared prior to becoming a Shareholder.

Subscriber shares entitle the Shareholders holding them to attend and vote at all general meetings of the Company but do not entitle the holders to participate in the profits or net assets of the Company except for a return of capital on a winding up.

Composition and Operation of Board and Committees
There are four Directors currently, all of whom are non-executive Directors. Ms. Michelle Green is a Director and an employee of NBEL, a Sub-Investment Manager and a Distributor of the Company. Ms. Gráinne Alexander and Ms. Mary Brady are Directors of NBAMIL, the Manager of the Company. The Articles of Association do not provide for retirement of Directors by rotation. However, the Directors may be removed by the shareholders by ordinary resolution in accordance with the procedures established under the Irish Companies Act 2014 (as amended). The Board meets at least quarterly. Other than the Audit Committee, there are no permanently authorised sub-committees of the Board.

The Board has satisfied itself that the Directors have sufficient time to fully discharge their duties and disclose in writing to the Board their other commitments, including other CIS directorships and non Fund directorships.

Irish Funds Corporate Governance Code
The Irish Funds ("IF") has published a corporate governance code ("IF Code") that may be adopted on a voluntary basis by Irish authorised collective investment schemes. It should be noted that the IF Code reflects existing corporate governance practices imposed on Irish authorised collective investment schemes, as noted above. If the IF Code is adopted on a voluntary basis, it can be referred to in the disclosures made in the Directors' Report in compliance with the provisions of the Irish Companies Act 2014 (as amended).

With effect from 1 January 2013, the Board voluntarily adopted the Corporate Governance Code for Irish Domiciled Collective Investment Schemes as published by the IF, as the Company's corporate governance code.

Report of the Depositary to the Shareholders

We have enquired into the conduct of Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2025, in our capacity as Depositary to the Company.

This report including the opinion has been prepared for and solely for the Shareholders in the Company as a body, in accordance with Part 5 of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended, (the 'UCITS Regulations'), and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

Responsibilities of the Depositary

Our duties and responsibilities are outlined in Part 5 of the UCITS Regulations. One of those duties is to enquire into the conduct of the Company in each annual accounting period and report thereon to the shareholders.

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company's Memorandum and Articles of Association and the UCITS Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not so complied, we as Depositary must state why this is the case and outline the steps which we have taken to rectify the situation.

Basis of Depositary Opinion

The Depositary conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties as outlined in Part 5 of the UCITS Regulations and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of the constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company's constitutional documentation and the appropriate regulations.

Opinion

In our opinion, the Company has been managed during the year, in all material respects:

(i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 ('the Central Bank UCITS Regulations'); and

(ii) otherwise in accordance with the provisions of the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank UCITS Regulations.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc

Report on the audit of the financial statements

Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc ('the Company') for the year ended 31 December 2025, which comprise the Balance Sheets, the Profit and Loss Accounts, the Statements of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and notes to the financial statements, including the summary of significant accounting policies set out in note 1. The financial reporting framework that has been applied in their preparation is Irish Law and FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland issued in the United Kingdom by the Financial Reporting Council.

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2025 and of its profit for the year then ended;
- have been properly prepared in accordance with FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland; and
- have been properly prepared in accordance with the requirements of the Companies Act 2014, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with ethical requirements that are relevant to our audit of financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report. However, because not all future events or conditions can be predicted, this statement is not a guarantee as to the company's ability to continue as a going concern.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

Opinions on other matters prescribed by the Companies Act 2014

In our opinion, based solely on the work undertaken in the course of the audit, we report that:

- the information given in the directors' report for the financial year ended for which the financial statements are prepared is consistent with the financial statements; and
- the directors' report, other than those parts relating to sustainability reporting where required by Part 28 of the Companies Act 2014, has been prepared in accordance with applicable legal requirements.

We have obtained all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

In our opinion the accounting records of the Company were sufficient to permit the financial statements to be readily and properly audited and the financial statements are in agreement with the accounting records.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

The Companies Act 2014 requires us to report to you if, in our opinion, the disclosures required by sections 305 to 312 of the Act, which relate to disclosures of directors' remuneration and transactions are not complied with by the Company. We have nothing to report in this regard.

Respective responsibilities

Responsibilities of directors for the financial statements

As explained more fully in the directors' responsibilities statement set out on page 36, the directors are responsible for the preparation of the financial statements in accordance with the applicable financial reporting framework that give a true and fair view, and for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on the IAASA's website at:

https://iaasa.ie/wp-content/uploads/docs/media/IAASA/Documents/audit-standards/Description_of_auditors_responsibilities_for_audit.pdf.

This description forms part of our auditor's report.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

Respective responsibilities (continued)

The purpose of our audit work and to whom we owe our responsibilities

Our report is made solely to the Company's members, as a body, in accordance with section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

Ernst & Young Chartered Accountants and Statutory Audit Firm

Dublin

Date: 14 April 2026

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc

The Directors
Neuberger Berman Investment Funds plc

Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc (the "Company"), which comprise the Balance Sheet, including the Schedule of Investments, as of 31 December 2025, and the related Profit and Loss Account and Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares, for the year then ended, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the Balance Sheet of the Company at 31 December 2025, and the results of its operations and changes in its net assets for the year then ended in accordance with accounting principles including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice).

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice), and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc (Continued)

Other Information

Management is responsible for the other information. Market Outlook

Fixed Income Market Outlook:

Fiscal overreach and debt sustainability have dominated the debate on sovereign fixed income valuations for years, but long-term yields now appear to reflect known risks. In the U.S. and Europe, improving carry profiles at longer maturities, supported by lower policy rates, should underpin the long end of yield curves, while governments may seek to counter bond market pressures through shorter-dated issuance, buybacks, and other balance sheet measures. Fiscal balances may also improve and sovereign debt concerns ease as a result of rising U.S. tariff revenues and, over time, potential productivity gains associated with advances in AI. In credit, current spreads are broadly consistent with fundamentals, but the changing structure of the economy at a time of tight spreads suggests a new phase of the credit cycle, in which previously defensive issuers may face greater risk as new industry winners and losers emerge, a dynamic that could also support higher long-term government yields. In this environment, investment positioning focuses on security selection and balance sheet quality, alongside selective increases in exposure to longer-duration bonds to seek higher yields and enhance return potential during periods of market mispricing.

Equities Market Outlook:

Heightened uncertainty in the current environment may create opportunities to build exposure to equity markets, with a preference for resilient earnings, margins and balance sheets, and an overall overweight to global equities expressed through a bias toward emerging markets. AI is expected to remain a key driver for global equities in 2026, with market leadership to date centered on a small group of U.S. mega-cap technology companies, while broader adoption since the launch of ChatGPT has begun to deliver observable productivity gains; however, equity performance is also likely to be shaped by valuation, earnings quality and regional dynamics. In the U.S., elevated valuations are balanced by high growth and strong returns on equity, although mega-cap technology valuations may face compression amid substantial capital expenditure, while small-cap valuations appear attractive and may be supported by lower interest rates and higher earnings. Regional opportunities include an overweight to Japan, supported by governance reforms and improving returns on equity; a more constructive outlook for China, given the potential for further stimulus; and selective exposure to Europe, where fiscal initiatives support the medium-term outlook but are offset by political uncertainties and a slower earnings trajectory. In this context, equity positioning may focus on diversified exposure across regions and sectors, emphasize companies demonstrating durable returns and efficient capital allocation, and maintain caution where valuations, capex intensity or policy risks imply greater dispersion beneath headline indices.

Asia Responsible Transition Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The credit markets navigated a year of meaningful macro cross currents, including the rollout of trade tariffs by the US Administration, a sustained soft patch in Chinese domestic economy and rising geopolitical tensions.
- Despite this backdrop, Asian credits delivered yet another strong positive performance in 2025. The continued rate cuts by the Federal Reserve and several Asian central banks, resilient global growth and strong fundamentals within the Asian markets, coupled with supportive technical factors, led to a material tightening of credit spreads over the year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Our overweight position in China developers contributed positively, supported by policymakers' continued easing stance towards the sector. Additionally, the high carry from short-dated bonds was a contributing factor.
    - Our overweight exposure to Financial tiered capital in the region added to performance as the sector outperformed on the back of an attractive rating-adjusted carry profile.
    - Our overweight positions in frontier countries' quasi-sovereign bonds also contributed to performance, given the spread compression witnessed over the year.
- Detractors from relative returns:
    - Performance was negatively impacted by our underweight in spread duration amid a year of tightening spreads. This positioning largely reflected our underweight exposure to long-tenor Investment Grade (IG) bonds. Within the JP Morgan Asia Credit Index (Total Return), a significant portion of these long-tenor IG bonds are in China sovereign and quasi-sovereign bonds, which are excluded due to the Portfolio's Responsible guidelines.

Overall, the investment team is satisfied with the Portfolio's performance over the period, which was in line with expectations. Returns were supported by active allocation decisions – particularly our overweight tilt in High Yield – and selective risk-taking in country-sectors while maintaining alignment with the Portfolio's Responsible guidelines and risk parameters.

Overview of investment activities during the reporting period

- We maintained a tilt towards High Yield throughout the year, utilising periods of widening spread and market weakness to tactically add risk, including during the second quarter around Liberation Day. We increased China exposure in the second quarter but shifted towards a more cautious stance towards the end of the year. In the sovereign space, we reduced exposure to Indonesia driven by concerns over fiscal transparency. We also selectively extended exposure to frontier markets like Mongolia and Sri Lanka.

China A-Share Equity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- In 2025, the China A-share market delivered a strong, structurally driven rally. Intermittent China–US trade frictions (e.g., the April tariff episode) induced brief bouts of sharp volatility and rapid sector rotation, but the market ultimately reverted to an upward trend on the back of policy support and structural recovery.
- Policy remained a key backstop. An accommodative monetary stance, new liquidity facilities, and active "national team" ETF purchases attracted additional equity allocations from both retail and institutional investors such as insurers. The shift of household savings out of deposits, together with incremental long-term capital, lifted both liquidity and risk appetite in China A-shares.
- Within equities, innovation-driven tech, AI, semiconductors, new energy equipment, telecoms, and industrial metals led the advance. Style and sector dispersion was pronounced: growth dominated over the year, while selected cyclical and value sectors (e.g., coal, non-ferrous, brokers, home appliances) saw periods of notable outperformance.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Stock selection within Industrials contributed most to the Portfolio's relative returns. An underweight to Energy and Utilities also contributed.
- Detractors from relative returns:
    - Stock selection in IT and an overweight in Consumer Staples detracted most from relative performance.

Overview of investment activities during the reporting period

- We added exposure to Materials, IT and Health Care. We reduced exposure to Consumer Staples, Consumer Discretionary and Industrials.
- The repositioning reflects a barbell approach, adding to areas with cyclical upside and structural growth while trimming more fully valued exposures. We are more cautious on broad consumption and are locking in gains where recent outperformance has made the risk/reward tradeoff less attractive.

China Bond* – Investment Manager's Report

For the period from 1 January until the Portfolio's close on 28 March 2025, the total return for the CNY Z Accumulating Class was -0.31%. Over the same period, the benchmark index, the FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (Total Return, CNY) (the Index), returned 0.11%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The key development over the quarter was the 14th National People's Congress (NPC) held in early March, which outlined key economic priorities for the year. Most targets announced were within expectations. GDP growth target was maintained at 5%. The official fiscal deficit was set at 4% with CNY1.3 trillion in ultra-long special Chinese Government Bonds (CGB), CNY500 billion for large bank recapitalisation, and a local government special bond quota of CNY4.4 trillion. These initiatives aim to achieve a balance between moderate fiscal expansion and debt management. Another important milestone was President Xi's meeting with a group of private executives in February during which he pledged to lower financing cost for private enterprises. Similar to the November 2018 symposium, this gesture was viewed as a reaffirmation of the government's commitment to supporting the private sector.
- In terms of economic data, near-term activity was supported by exports being frontloaded ahead of anticipated US tariffs. Nonetheless, domestic challenges persisted, as evidenced by weak housing data, persistent deflationary pressures, and a continued slowdown in consumption.
- After a strong rally in CGB yield in 2024, the relatively tight interbank rates in February and March resulted in rates moving higher over the course of the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Offshore credits were positive contributors due to attractive yield differentials and spread compression.
- Detractors from relative returns:
    - Onshore credits and rates were the main detractors as yields move higher during the reporting period.

Overview of investment activities during the reporting period

- Apart from the tight onshore credit spreads, the rates differentials between CNY and USD stayed significantly wide, which resulted in an attractive relative value proposition for Chinese USD credits.
- Portfolio liquidated on 28 March 2025.

* Portfolio liquidated on 28 March 2025.

China Equity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- During the reporting period, Greater China equities performed strongly as China's economy continued to recover. This has in part been thanks to policymakers' ongoing support to boost domestic consumption and investment in new economic sectors. More importantly, a broad-based recovery in corporate earnings and significant breakthroughs in the China's AI landscape all underpinned an improvement in investor confidence.
- Markets finished the year on a positive note following the release of the 15th Five Year Plan in October 2025, which highlighted the government's ongoing emphasis on building a modern industrial system, accelerating technology innovation and self-sufficiency, and boosting domestic demand.

What affected the Portfolio's performance during the reporting period

- **Contributors to relative returns:**
  - Main contributors to performance relative to the MSCI China All Shares Index (Total Return) (the Index) included Industrials (stock selection in Machinery and Electrical Equipment), Health Care (stock selection in Biotechnology) and Consumer Staples (significant underweight).
- **Detractors from relative returns:**
  - Main detractors from relative performance were Materials (stock selection in Chemicals and Metals & Mining), Consumer Discretionary (overweight and stock selection in Automobile Components, Textile Apparel & Luxury Goods) and Communication Services (underweight and stock selection in Entertainment).

Overview of investment activities during the reporting period

- We continue to identify high quality companies with good earnings visibility. During the reporting period, the Portfolio's exposure to IT had the largest increase from 12.69% to 18.91%. Meanwhile, the Portfolio's exposure to Financials had the largest decrease from 12.38% to 5.52%.
- At the end of the reporting period, the Portfolio's largest sector underweight relative to the Index was Financials (5.52% vs. 19.50%). The Fund's largest sector overweight relative to the Index was Industrials (22.38% vs. 8.75%).

Climate Innovation – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

In 2025, global equities delivered another year of positive returns, though regional leadership shifted. US markets remained supported by large-cap growth and technology, but international markets played a more prominent role, with select Asian and emerging economies benefiting from improving demand and policy support, while European markets benefitted from structural tailwinds in defense and an industrial revival. Building on prior years, key themes centered on the continued expansion and commercialisation of AI across sectors. As inflation eased, major central banks, led by the Federal Reserve, moved gradually toward more accommodative policy, while remaining data-dependent. Geopolitical tensions and shifting trade and industrial policies, including those under the renewed Trump administration, periodically weighed on sentiment but did not prevent global equities from ending the year higher.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Overweight to Industrials and underweight to Health Care and Consumer Staples versus MSCI All Country World Index (Net of Tax) (the Index).
    - Security selection within Industrials, Consumer Discretionary and Energy.
- Detractors from relative returns:
    - Underweight to Financials and Communication Services versus the Index.
    - Security selection within Information Technology and Consumer Staples.

Overview of investment activities during the reporting period

- Additions and new positions initiated in key enablers and beneficiaries of the climate transition across sectors, from Semiconductor and Electronics Platforms that power energy-efficient computing and grid/EV technologies, to low-carbon infrastructure, equipment, and materials for cleaner energy and industry, as well as end-market disruptors in the Transport sector.
- Positions were exited in companies where relative risk/reward was deemed less favourable or where specific market or sector challenges persisted.

.

CLO Income – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Higher quality Collateralised Loan Obligation (CLO) BB debt spreads ended 2024 in the Secured Overnight Financing Rate (SOFR) +480 basis points (bps) context. Strong investor demand in early 2025 offset significant primary market supply, leading to spread tightening through mid-February, with CLO BB debt spreads reaching post-Global Financial Crisis levels of approximately SOFR+450bps. However, headwinds from primary market supply technicals and a deterioration in macro sentiment led to widening spread in the second half of the first quarter and into March month-end, with macro weakness primarily driven by tariff-related concerns and the impact to US growth.
- CLO BB spreads widened further following "Liberation Day" on 2 April 2025, due to worse than expected tariff proposals from the US administration and concerns regarding the economic implications. Higher quality CLO BB spreads reached a local wide of approximately SOFR+650 bps in mid-April prior to the initial 90-day tariff pause. Subsequent to the pause and the decision by the US and China to agree on tariff de-escalations in May, CLO BB spreads rallied into second quarter-end, with CLO BB spreads in the primary market returning to pre-Liberation Day levels in the SOFR+500bps context. In the second half of 2025, CLO BB spreads continued to tighten, despite a brief period of modest spread widening in early October due to renewed US/China tariff concerns, with CLO BB spreads finishing the year in the SOFR+475bps context, with investor demand offsetting record levels of primary market supply.
- In 2025, USD CLO new issue volumes were $165.7 billion, a new annual record surpassing 2024. CLO new issuance was supported by CLO debt spreads being at the tight end of historical ranges in 2025. The trailing 12M par-weighted default rate for the Morningstar LSTA US Leveraged Loan Index as of 31 December 2025 was 1.23%, up 32bps from the prior year-end.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Allocation to EUR CLO debt.
- Detractors from relative returns:
    - Allocation to USD loan market.

Overview of investment activities during the reporting period

- Net inflows during the reporting period were primarily deployed into a mix of USD and EUR BBs in the primary and secondary markets.
- The Portfolio's exposure is balanced with approximately 42% of CLO holdings in USD CLOs and 58% in EUR CLOs.

Commodities – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The S&P 500 finished the year strongly, returning +17.9% for 2025, despite the 43‑day government shutdown, which delayed key reports and muddied some November readings.
- Volatility and payoff were nearly 19% drawdown early in the year followed by a ~38% rebound to new highs, underscoring benefits of staying invested through turbulence.
- Economy was resilient (solid GDP, cooling CPI, slightly higher unemployment), the Federal Reserve delivered a final 25 basis points "insurance cut", core bonds returned +1.1% and commodities returned +5.9% with gold reaching record highs.

What affected the Portfolio's performance during the reporting period

Contributors to absolute returns:

- The Portfolio's overweight position in gold was additive to performance. Gold rose to a record high at year end, supported by another rate cut and with further rate cuts being priced in for 2026 as inflation data cooled. Central bank buying continues and remains a significant tailwind as Western investors add to positions in physical gold ETFs as well.
- Silver was the second largest contributor to returns during the year, after the precious metal soared above $80/oz, an all-time high, amid strong sentiment and a change in regulatory treatment of imports in China.

Detractors from absolute returns:

- Natural Gas contributed negatively amid a volatile year. Strong performance amid cold weather earlier in 2025 gave way to lower returns through the year. In December, prices dropped after prospects of a cold winter snap turned to warmer forecasts.
- Cocoa slipped amid concerns around demand destruction. Cocoa has been very volatile this year after rising 340% in 2024. Prices pared losses late in the year after the Bloomberg Commodity Index announced cocoa would be reincluded in the benchmark in 2026, after it was removed in 2005.

Overview of investment activities during the reporting period

- Sector allocation added value. Overweight positions in precious metals and platinum (risk-mitigation driven), copper and aluminum, and livestock (low risk and scarcity) added value. Diversification in power detracted, driven by lower TTF gas. Underweight in silver detracted (based on volatility and risk mitigation, as we prefer to diversify with out-of-benchmark platinum).
- Curve positioning added value. Further out positioning bets in contangoed natural gas and agriculture were largely beneficial. Flat curved WTI detracted the most value.
- Frequent rebalancing was immaterial.
- The collateral strategy sleeve largely tracked the 3-month US Treasury bill rate yields.

Corporate Hybrid Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation in the euro area continued to moderate towards, but remained somewhat above, the European Central Bank's (ECB) 2% target, the ECB moved from a prolonged pause to an easing cycle. Policy rates were reduced in a series of gradual steps as growth slowed, labour markets softened at the margin and disinflation became more broad based across the currency bloc. Other European central banks, including the Bank of England and the Swiss National Bank, also began to lower policy rates in response to weaker activity and easing inflation pressures.
- European government bond markets experienced phases of rate volatility, reflecting shifting expectations for the pace and extent of monetary easing, as well as ongoing political and fiscal headlines in some countries. Core euro area yields declined over the year as the market priced in a more accommodative ECB stance, while peripheral spreads were generally contained, supported by the ECB's continued presence and a search for yield.
- European risk assets generally performed well over the period. Euro investment grade and high yield credit (including corporate hybrids specifically) benefited from resilient corporate balance sheets, relatively low default expectations and steady demand from both domestic and international investors. Credit spreads in Europe remained tight by historical standards but were supported by the combination of improving inflation dynamics, the transition to easier monetary policy and limited net new supply in certain segments of the market, despite intermittent bouts of macro and political uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection decisions were the top contributors, adding +113 basis points (bps).
    - At a sector level, Utilities (+44bps), Real Estate (+19bps), and Telecommunications (+18bps).
    - At an issuer level, Heimstaden Bostad (HEIBOS), Unibail-Rodamco-Westfield (URWFP), and Edison International (EIX).
- Detractors from relative returns:
    - Sector allocation primarily driven by our underweights to Utilities, Energy and Consumer Goods.
    - Yield curve positioning, driven primarily by the Portfolio's underweight to USD duration.

Overview of investment activities during the reporting period

- We kept the Portfolio defensively positioned, selectively adding to credits where we saw dislocations from relative value.
- Prioritised high-carry, high quality issuers to take advantage of elevated all-in-yields.

Developed Market FMP - 2027 – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation continued to ease but remained above the Federal Reserve's (Fed) 2% target, the Fed shifted from a prolonged hold to an easing cycle in the second half of 2025, delivering a series of 25 basis points cuts that brought the target range to 3.75%–3.50% by year end. Other major central banks also moved policy rates lower as global growth slowed, and disinflation progressed across most developed markets.
- US rates markets experienced periods of volatility, with a mid-year rally followed by some backup in yields late in the fourth quarter as markets reassessed the pace and extent of future easing. For the full year, the US 10-year Treasury yield declined from 4.57% to 4.17%, while 10-year sovereign yields in markets such as Japan, Germany and Spain moved higher, underscoring mixed global rate dynamics.
- Developed markets (DM) corporate credit generally performed well over the period, supported by resilient corporate fundamentals, tighter credit spreads and an improving inflation backdrop alongside the Fed's easing cycle. Investment grade and high yield corporate credit delivered broadly positive returns, benefiting from steady demand for spread products despite bouts of rate volatility and lingering macro uncertainty.

Against the macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to returns:
  - The Portfolio's investment grade (IG) and high yield corporate exposures delivered broad-based performance.
- Detractors from returns:
  - There were no material detractors from a fixed income sector perspective.

Overall, the investment team is satisfied with the performance of the Portfolio during the period, which was in line with expectations.

Overview of investment activities during the reporting period

- The Portfolio was invested across corporate industries, rating cohorts and DM countries.
- At the end of the reporting period, the Portfolio was approximately 80% IG rated and 20% below IG.

EMD Corporate – Social and Environmental Transition – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals, a weaker US dollar, stronger commodities prices, renewed capital flows, as well as rates ending the year lower. This supported a third consecutive year of strong returns in the EMD corporate asset class.
- This was in the face of notable challenges. Liberation Day tariff announcements caused major market turbulence. German fiscal stimulus led to the largest rise in 10-year bund yields since 1990 and ended the year near recent peaks. Gold and silver surged over inflation and currency debasement concerns, marking the biggest annual gains since 1979.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Key performance came from security selection in Mexican industrials and quasi-sovereign positions, Colombian oil & gas and financials, and Hong Kong real estate.
    - By sector, security selection in financial, oil & gas, property and utilities.
- Detractors from relative returns:
    - By country, the main detractors were the overweight to Argentina and Brazil.
    - By sector, positioning in distressed Brazilian industrial names detracted.

Overview of investment activities during the reporting period

- By sector, we reduced exposure to industrials and consumer. We added exposure to financials, utilities, and commodities sectors.
- By country, key changes included adding exposure to Hong Kong, Peru, Colombia and the Philippines. We reduced exposure to Argentina, though remain overweight. We also reduced exposure to Brazil and Turkey over the course of the year.

Emerging Market Debt – Hard Currency – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows.
- This was in the face of notable challenges. Liberation Day tariff announcements caused major market turbulence. German fiscal stimulus led to the largest rise in 10-year bund yields since 1990. Gold and silver surged over inflation and currency debasement concerns, marking biggest annual gains since 1979.
- Two defaulted names, Lebanon and Venezuela, benefited from investor optimism around political changes leading to an eventual debt resolution.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Country allocation, driven by overweight allocations to higher yielding markets, particularly Ecuador, Egypt, Ivory Coast and Lebanon.
    - Security selection via Pemex of Mexico and euro-denominated bonds in Ivory Coast and Peru.
- Detractors from relative returns:
    - Positioning in Argentina, which suffered volatility around elections, absence from high yielding Kenya.

Overview of investment activities during the reporting period

- The Portfolio maintained a high yield bias over investment grade (IG) credits.
- We have selectively reduced risk following strong performance and rising global and idiosyncratic risks in Colombia, Egypt, Indonesia, Panama and Ukraine, and exited Senegal and Israel. At the same time, we added to positions where we see improving fundamentals and positive reform momentum, increasing exposure to Ecuador, Honduras, Suriname, Uzbekistan, Bulgaria ahead of Euro accession, and Oman, ahead of its return to IG.
- Allocation to EUR-denominated bonds and corporate bonds was 12.2% and 9.4% respectively at the end of the reporting period.

Emerging Market Debt – Local Currency – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows.
- This was in the face of notable challenges, with the "Liberation Day" tariff announcements by the US causing major market turbulence.
- South Africa was the best performing index country over the period followed by Mexico, while India and China were the main laggards over the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - FX and Rates positioning contributed positively to relative returns.
    - The overweight FX and duration through the year in South Africa, while FX and duration overweight in Brazil, Hungary, Turkey and Indonesia also contributed positively.
    - Positioning in off-benchmark frontier markets, with strong performance from positions in Egypt, Zambia, Kazakhstan, Ghana and Nigeria.
- Detractors from relative returns:
    - Positioning in Colombia followed by off-benchmark exposure in Argentina and an underweight in Thai baht.

Overview of investment activities during the reporting period

- The Portfolio gradually added EM FX risk to a strong overweight from the second quarter, amid expectations of USD weakness, signs of resilient EM currency fundamentals and improving EM capital flows. Through the year we also added exposure to different frontier market currencies including Egyptian pound, Uganda shilling and Kazakh tenge.
- On the rates side we held an overweight duration through the year, focused on countries where we see scope for easing over the medium-term such as Brazil and Mexico, but started to take partial profits since September.

Emerging Market Debt Blend – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows.
- This was in the face of notable challenges. Liberation Day tariff announcements caused major market turbulence. German fiscal stimulus led to the largest rise in 10-year bund yields since 1990. Gold and silver surged over inflation and currency debasement concerns, marking biggest annual gains since 1979.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Bottom-up positioning in hard currency (HC), overweight allocations to higher yielding markets, security selection via Pemex of Mexico and euro-denominated bonds in Ivory Coast and Peru.
    - Bottom-up positioning in local currency (LC), overweight duration in South Africa and overweight to the rand and off-benchmark frontier market exposure.
    - Bottom-up positioning in Corporates across the Financials, Oil & Gas and Technology, Media & Telecommunications (TMT) sectors.
    - Overweight allocation to LC.
- Detractors from relative returns:
    - Bottom-up positioning in HC, overweight to Argentina and underweight to Panama.
    - Bottom-up positioning in LC, duration overweight to Colombia, an overweight to the Thai baht and Taiwan dollar.
    - Bottom-up positioning in Corporates across Brazilian industrials.

Overview of investment activities during the reporting period

- Tactically moved the relative exposure to an overweight in LC and neutral exposure to sovereigns while maintaining some cash. This was funded by an underweight to Corporates.
- HC maintained a high yield bias over investment grade sovereigns while selectively reducing risk following strong performance and rising global and idiosyncratic risks. We added to positions where we see improving fundamentals and positive reform momentum.
- Within Corporates an increased exposure to the TMT, Metals & Mining sectors, while trimming Industrials and Oil & Gas.
- LC maintained a risk-on stance on EM FX risk, as the backdrop for EM currency fundamentals remains constructive with a bias towards high carry currencies. On the rates side we took partial profits on the overweight duration.

Emerging Market Debt Sustainable Investment Grade Blend – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows.
- This was in the face of notable challenges. Liberation Day tariff announcements caused major market turbulence. German fiscal stimulus led to the largest rise in 10-year bund yields since 1990. Gold and silver surged over inflation and currency debasement concerns, marking biggest annual gains since 1979.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Bottom-up positioning in hard currency (HC) sovereign countries including overweights in Mexico and Romania, sovereign curve positioning in Mexico, as well as security selection in euro-denominated bonds.
    - Bottom-up positioning in local market currencies including the Mexican peso, Hungarian forint, Polish zloty, and Malaysian ringgit. The overweight duration in Mexico and Indonesia was also positive.
- Detractors from relative returns:
    - Bottom-up positioning in local currency (LC) particularly from excluding China, FX overweight in Taiwan and India, and duration overweight in Colombia.

Overview of investment activities during the reporting period

- Tactically moved the relative exposure from underweight LC and HC at the start of the year, to an overweight in LC early in the period. We maintained this overweight for most of the year.
- HC trading activity has been focused on reducing risk, increased exposure to the Middle East and Latin America, reduced exposure to Romania, Kazakhstan, Panama and Indonesia.
- LC maintained a risk-on stance on EM FX, as the backdrop for EM currency fundamentals remains constructive with a bias towards high carry currencies. On the rates side we took partial profits on the overweight duration.

Emerging Markets Equity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Solid corporate earnings, a weakened US dollar and risk-on investor sentiment benefited emerging markets (EM) equities, which rallied all year. An influx of investor capital, seeking both return potential and geographic diversification, along with enthusiasm about the future of generative AI underpinned the rally.
- Lower inflation, plus the initial set of Federal Reserve rate cuts, were also supportive.
- Within the Index, Materials and IT were the clear winners by sector. All sectors showed positive returns, with Consumer Staples and Real Estate lagging. By country, Colombia and Korea advanced most. Saudi Arabia and Indonesia posted the largest losses.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Stock selection within IT, Financials and Industrials benefited returns.
    - By country, Taiwan, China and Saudi Arabia added value.
- Detractors from relative returns:
    - Stock selection in Materials detracted most, followed by Consumer Discretionary and Health Care.
    - By country, India and South Africa and a holding in non-Index Argentina.

Overview of investment activities during the reporting period

- Over the course of the year, our exposure to both IT and Industrials increased, as our high conviction names outperformed, and as new opportunities appeared. Within IT, late in the year, investors switched back to generative AI-related supply chain names from generative AI-model developers. We have exposure to both segments, but our conviction is higher in supply chain names.
- Our underweights to the Materials and Financials sectors ended the period as the two largest.
- Despite poor recent returns, India remains the top overweight given a rich set of idiosyncratic names. Taiwan ended the year as our largest underweight.

Euro Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation in the euro area continued to moderate towards, but remained somewhat above, the European Central Bank's (ECB) 2% target, the ECB moved from a prolonged pause to an easing cycle over the course of 2025. Policy rates were reduced in a series of gradual steps as growth slowed, labour markets softened at the margin and disinflation became broader based across the currency bloc. Other ECB's, including the Bank of England and the Swiss National Bank, also began to lower policy rates in response to weaker activity and easing inflation pressures.
- European government bond markets experienced phases of rate volatility, reflecting shifting expectations for the pace and extent of monetary easing, as well as ongoing political and fiscal headlines in some countries. Core euro area yields declined over the year as the market priced in a more accommodative ECB stance, while peripheral spreads were generally contained, supported by the ECB's continued presence and a search for yield.
- European risk assets generally performed well over the period. Euro investment grade and high yield credit benefited from resilient corporate balance sheets, relatively low default expectations and steady demand from both domestic and international investors. Credit spreads in Europe remained tight by historical standards but were supported by the combination of improving inflation dynamics, the transition to easier monetary policy and limited new net supply in certain segments of the market, despite intermittent bouts of macro and political uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection was the main driver in positive relative returns over the year; in particular from our government & corporate financials (credit) buckets, which added +79 basis points (bps) and +22bps, respectively.
- Detractors from relative returns:
    - Sector allocation detracted 27bps from relative performance (primarily due to our derivatives exposure).
    - Duration was a small detractor of 7bps.

Overview of investment activities during the reporting period

- Over the year, we were active from a duration, geographical and credit selection perspective, focusing on positioning the Portfolio defensively whilst simultaneously taking advantage of elevated all-in-yields and high carry opportunities across the European market.

Euro Bond Absolute Return – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation in the euro area continued to moderate towards, but remained somewhat above, the European Central Bank's (ECB) 2% target, the ECB moved from a prolonged pause to an easing cycle over the course of 2025. Policy rates were reduced in a series of gradual steps as growth slowed, labour markets softened at the margin and disinflation became broader based across the currency bloc. Other ECB's, including the Bank of England and the Swiss National Bank, also began to lower policy rates in response to weaker activity and easing inflation pressures.
- European government bond markets experienced phases of rate volatility, reflecting shifting expectations for the pace and extent of monetary easing, as well as ongoing political and fiscal headlines in some countries. Core euro area yields declined over the year as the market priced in a more accommodative ECB stance, while peripheral spreads were generally contained, supported by the ECB's continued presence and a search for yield.
- European risk assets generally performed well over the period. Euro investment grade and high yield credit benefited from resilient corporate balance sheets, relatively low default expectations and steady demand from both domestic and international investors. Credit spreads in Europe remained tight by historical standards but were supported by the combination of improving inflation dynamics, the transition to easier monetary policy and limited new net supply in certain segments of the market, despite intermittent bouts of macro and political uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection was the main driver in positive relative returns over the year; in particular from our government & corporate financials (credit) buckets, which added +79 basis points (bps) and +22bps, respectively.
- Detractors from relative returns:
    - Sector allocation detracted 27bps from relative performance (primarily due to our derivatives exposure).
    - Duration was a small detractor of 7bps.

Overview of investment activities during the reporting period

- Over the year, we were active from a duration, geographical and credit selection perspective, focusing on positioning the Portfolio defensively whilst simultaneously taking advantage of elevated all-in-yields and high carry opportunities across the European market.

European High Yield Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The European high yield bond market finished 2025 with positive returns driven by slower but resilient economic growth and moderating inflation despite pockets of volatility brought about by US tariff policy. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand.
- High yield issuers' aggregate fundamentals remained broadly stable, though some lower-quality issuers continued to face industry-specific or idiosyncratic pressures.
- Default rates remained relatively low.

Against this macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to returns:
    - From a sector perspective, positioning in Support Services, Technology & Electronics and Health Care contributed the most. Based on ratings, positioning in B, CCC & below and BB rated issuers added the most.
- Detractors from returns:
    - From a sector perspective, positioning in Energy, Food & Drug Retail and Food, Beverage and Tobacco detracted the most. Based on ratings, there were no material detractors looking at the broader ratings segments, but the slight overweight to unrated issuers detracted slightly.

Overview of investment activities during the reporting period

- We rotated selectively into BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in securities rated CCC (which is an underweight) is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power, tariff impact and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to centre the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

European Sustainable Equity* – Investment Manager's Report

Macroeconomic, market and asset class conditions during the reporting period

- Global markets rallied on fiscal and monetary stimulus, with investors looking through trade tensions; major asset classes posted positive returns and risk appetite rebounded.
- Global markets delivered broad-based gains, led by emerging markets and AI- and technology-related exposures, while currency moves helped returns for euro and sterling-based investors.
- The performance of US equities reflected tariff pressures, AI enthusiasm and monetary policy normalisation and global bonds benefited from higher yields and a weaker dollar.

What affected the Portfolio's performance during the reporting period

- Stock selection almost fully explains the underperformance, with the largest negative contribution coming from the Financials sector as banks and insurers, where we were underweight, outperformed on favourable, though likely temporary, interest-rate developments, and several data providers, which we view as structural winners in this value chain, underperformed amid fears that AI could become a headwind to their businesses.
- The result from sector allocation was slightly negative, due to the overweight in Health Care and the underweight in Utilities.
- At a stock level, our holdings in Euronext (Fintech & Financial Inclusion), AstraZeneca, CVS Group, Galderma (access to Health Care), and Richemont (Conscious Consumer) contributed most.
- Our holdings in London Stock Exchange Group, Partners Group (Fintech & Financial Inclusion), Novo Nordisk (Access to Health Care), RELX (Digital Enterprise) and Beiersdorf (Conscious Consumer) were the largest detractors.

Overview of investment activities during the reporting period

- The Portfolio exited life science tool maker Tecan and drug maker Novo Nordisk (access to Health Care) due to sales uncertainty based on US policy uncertainties, and IT consultancy firm Netcompany (Digital Enterprise), where concerns over revenue visibility and merger and acquisitions integration risks prompted the sale.
- Proceeds from these exits were redeployed across existing holdings, with a defensive approach that prioritised resilience and reduced exposure to operationally challenged companies.
- A new position was initiated in Hexagon (Digital Enterprise), a Swedish specialist in factory automation and digital reality solutions, selected for its strong market position and growth prospects.

* Portfolio liquidated on 17 December 2025.

Event Driven – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As discussed in our semi-annual report, the market optimism that a pro-business/de-regulatory administration would drive a wave of mergers & acquisitions (M&A) and the re-opening of the IPO market was delayed as tariff rhetoric leading up to "Liberation Day" drove significant uncertainty in policy direction and increased market volatility.
- As the administration's policy stance softened and volatility subsided, M&A activity resumed and IPO markets began to re-open in earnest as was expected to be the case entering the year.
- With the exception of the government shut down in autumn which paused most of the activity in the IPO market for the balance of the year as the SEC halted their review process, the opportunity set for our investment strategy steadily improved after Liberation Day.
- With uncertainty with respect to policy, macroeconomic data, and a number of geopolitical situations, we would expect there to be volatility in markets over the course of the year. Our strategy and the way we implement it is well suited to capitalise in this type of market environment.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
    - Western Digital (Catalyst), Warner Brothers Discovery (Merger Arbitrage), Caris Life Sciences (Catalyst), API Group, and General Motors (Catalyst)
    - Market Neutral Catalyst, Merger Arbitrage and Equity Capital Markets (a subset of Catalyst) have all contributed positively in 2025.
- Detractors from absolute returns:
    - FTAI Aviation (Catalyst), Fiserv (Catalyst), Loar Holdings (Catalyst), Nutanix (Catalyst), and Saia (Catalyst)

Overview of investment activities during the reporting period

- After the pause in M&A and IPO activity discussed above, deal volumes steadily increased and the IPO calendar was active and accelerated.
- Our exposure to Merger Arbitrage was the highest it has been since we launched the Portfolio, and we expect this to increase further in 2026 with more M&A. We have capitalised on deals that have closed and those that are progressing.
- The IPO market re-opened in 2025, and we participated in a number of opportunities.
- In Market Neutral Catalyst we realised profits in a number of situations over the course of the year and continue to identify new situations as management teams continue to look for creative ways to unlock shareholder value. Our hedging construct has served the strategy well over the course of the year especially in the early months of the year.

Global Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation continued to ease but remained above the Federal Reserve's (Fed) 2% target, the Fed shifted from a prolonged hold to an easing cycle in the second half of 2025, delivering a series of 25 basis points cuts that brought the target range to 3.75%–3.50% by year end. Other major central banks also moved policy rates lower as global growth slowed, and disinflation progressed across most developed markets.
- US rates markets experienced periods of volatility, with a mid-year rally followed by some backup in yields late in the fourth quarter as markets reassessed the pace and extent of future easing. For the full year, the US 10-year Treasury yield declined from 4.57% to 4.17%, while 10-year sovereign yields in markets such as Japan, Germany and Spain moved higher, underscoring mixed global rate dynamics.
- Risk assets generally performed well over the period, supported by resilient corporate fundamentals, tighter credit spreads and an improving inflation backdrop alongside the Fed's easing cycle. Investment grade (IG) credit, high yield (HY), emerging markets (EM) and loans all delivered broadly positive returns, benefiting from steady demand for spread products despite bouts of rate volatility and lingering macro uncertainty.

Against the macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Global Securitised Credit, primarily Agency Mortgage-Backed Securities (MBS) and Asset-Backed Securities, local authority bonds, security selection in EM debt and global government bonds.
    - Overweight in US rates and underweight overall Portfolio duration.
    - Major currencies: overweight in Australian dollar, Swiss franc and Turkish lira.
- Detractors from relative returns:
    - Security selection in USD IG credit.
    - Overall Portfolio currency positioning detracted with worst performers being underweight in Japanese yen, overweight in Norwegian krone and underweight British pound sterling.
    - Underweight allocation to global nominal sovereigns (which was more than offset by security selection) and allocation to EM debt credit default swap derivatives (which was more than offset by positioning in hard and local currency EM).

Overall, the investment team is satisfied with the performance of the Portfolio during the period, which was in line with expectations.

Overview of investment activities during the reporting period

- Over the period we primarily increased exposure to non-US global sovereign swaps, non-US developed markets (DM), IG credit and US Treasuries, and we reduced exposure to EM local currency and swaps, JPY/USD, securitised credit, agency MBS, US agencies, US HY, hybrids and select non-US DM sovereign bonds (mainly JGBs, core Europe and Canada), among others.
- We reduced the Portfolio's duration by approximately 0.23 of a year.

Global Equity Megatrends – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Global trade and tariff policy dominated the macroeconomic debate in 2025.
- Geopolitical conflict persisted across various regions.
- Investors were increasingly concerned with the pace of AI-related capex investments and the risk of an AI bubble.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
  - Alibaba, Corning, ATI.
- Detractors from absolute returns:
  - Criteo, Perrigo, NICE.

Overview of investment activities during the reporting period

- We initiated positions in Wuxi Biologics, Charles River Laboratories in the first quarter.
- We initiated a position in Shift4 Payments in the second quarter.
- We initiated a position in ON Semiconductor and exited our position in Chart Industries (due to a takeover) in the third quarter.

Global Flexible Credit Income – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation continued to ease but remained above the Federal Reserve's (Fed) 2% target, the Fed shifted from a prolonged hold to an easing cycle in the second half of 2025, delivering a series of 25 basis points cuts that brought the target range to 3.75% - 3.50% by year end. Other major central banks also moved policy rates lower as global growth slowed and disinflation progressed across most developed markets.
- US rates markets experienced periods of volatility, with a mid-year rally followed by some backup in yields late in the fourth quarter as markets reassessed the pace and extent of future easing. For the full year, the US 10-year Treasury yield declined from 4.57% to 4.17%, while 10-year sovereign yields in markets such as Japan, Germany and Spain moved higher, underscoring mixed global rate dynamics.
- Risk assets generally performed well over the period, supported by resilient corporate fundamentals, tighter credit spreads and an improving inflation backdrop alongside the Fed's easing cycle. Investment grade (IG) credit, high yield (HY), emerging markets (EM) and loans all delivered broadly positive returns, benefiting from steady demand for spread products despite bouts of rate volatility and lingering macro uncertainty.

Against the macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
    - Duration and exposure to US HY, hybrids and EM debt were the largest contributors.
    - Exposure to collateralised loan obligations, senior floating rate loans, securitised credit and alternative credit were secondary contributors .
    - Exposure to IG credit also contributed, but to a lesser degree.
- Detractors from absolute returns:
    - There were no material detractors.

Overall, the investment team is satisfied with the Portfolio's performance during the period, which was broadly in line with expectations and driven by the intended multi-sector risk positioning.

Overview of investment activities during the reporting period

- The Portfolio was invested across credit sectors, rating cohorts and geographies.
- We reduced exposure to IG credit, ABS, Bank Loans and Credit Risk Transfer, and we added exposure to HY credit, hybrids and slightly to EM debt.
- The Portfolio's duration decreased 0.15 years over the year.

Global High Yield Engagement – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The global high yield bond market finished 2025 with solid returns driven by resilient economic growth and moderating inflation. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets.
- Outside of the higher risk Eastern European and China property sectors, global high yield issuers' aggregate fundamentals remained broadly stable, though some lower-quality issuers continued to face industry-specific or idiosyncratic pressures.
- Default rates in the US, Europe and other developed markets remained around average.

Against this macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - From a sector perspective, positioning in Gas Distribution, Diversified Financial Services and Support Services contributed the most. Based on ratings, positioning in B and CCC & below rated issuers added the most.
- Detractors from relative returns:
    - From a sector perspective, positioning in Energy, Environmental and Media-Cable detracted the most.
    - Based on ratings, positioning in BB rated issuers detracted the most.

Overview of investment activities during the reporting period

- In our global high yield Portfolio, we rotated selectively into BB's where prices remained attractive relative to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to centre the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we viewed as resilient in the current environment.

Global Investment Grade Credit – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Market volatility during the first half occurred largely due to the 2 April announcement of tariff rates on US trading partners, which the implementation was subsequently delayed allowing the US administration to negotiate bespoke trade deals. In the second half of 2025, corporate yields compressed largely reflecting weaker US labour market data, while the impact of tariffs on US inflation was relatively modest.
- The Federal Reserve (Fed) cut the policy rate three times in 2025. Markets continue to anticipate modest additional Fed rate cuts in 2026 as policymakers seek to sustain the expansion while keeping inflation on a downward trajectory. US economic growth remains strong, however, driven by consumer spending, and technology driven capital spending. In Europe, the macroeconomic outlook remains less favourable than the US, given the impact of tariffs on trade, elevated savings rates, and high energy costs.

What affected the Portfolio's performance during the reporting period

The Portfolio generated positive returns in 2025 largely driven by coupon income and slightly lower corporate yields.

- Contributors to relative returns:
    - Senior unsecured bonds from Real Estate, Consumer Non-Cyclical, and Banking drove outperformance. Corporate hybrid bonds from the Utility and Real Estate sectors also made positive contributions.
- Detractors from relative returns:
    - The Communications sector slightly detracted.

Overview of investment activities during the reporting period

- We participated in several attractively priced primary new issue deals in 2025 which generated strong relative outperformance for the Portfolio. Our core holdings in the Real Estate and Financial sectors also added to performance.
- Portfolio duration position was maintained slightly above benchmark levels largely due to Corporate Bond holdings in euro and sterling credit.

Global Opportunistic Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation continued to ease but was still above the Federal Reserve's (the Fed) 2% target, the Fed shifted from a prolonged hold to an easing cycle in the second half of 2025, delivering a series of 25 basis points (bps) cuts that brought the inflation target range to 3.75% - 3.50% by year end. Other major central banks also moved policy rates lower as global growth slowed, and disinflation progressed across most developed markets.
- US rates markets experienced periods of volatility, with a mid-year rally followed by some backup in yields late in the fourth quarter as markets reassessed the pace and extent of future easing. For the full year, the US 10-year Treasury yield declined from 4.57% to 4.17%, while 10-year sovereign yields in markets such as Japan, Germany and Spain moved higher, underscoring mixed global rate dynamics.
- Risk assets generally performed well, supported by resilient corporate fundamentals, tighter credit spreads and an improving inflation backdrop alongside the Fed's easing cycle. Investment Grade (IG) Credit, High Yield, Emerging Markets and Loans all delivered broadly positive returns, benefiting from steady demand for spread products despite bouts of rate volatility and lingering macro uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Positioning in global non-Investment Grade (non-IG) (led by EUR non-IG), Emerging Markets Hard Currency Debt, Securitised Credit (primarily Agency Mortgage-Backed Securities (MBS), Asset-Backed Securities (ABS) and Credit Risk Transfers) and non-USD IG Credit.
    - Duration and positioning in core-Europe, Mexico and UK rates.
    - Currency positioning in euro and Chinese yuan.
- Detractors from relative returns:
    - Underweight global nominal government bonds and USD IG credit.
    - Positioning in US, China and Canada rates.
    - Currency positioning in Japanese yen, Canadian dollar, Indonesian rupiah and New Zealand dollar.

Overview of investment activities during the reporting period

- We increased exposure to non-US Developed Market (DM) Government Bonds, non-US DM IG Credit, Hybrids, High Yield CDX and US Treasuries, and we reduced exposure to Emerging Market Debt, select currency exposures (led by JPY/USD), Agency MBS, High Yield, Securitised Credit and US IG credit.
- As of year-end, the Portfolio was slightly underweight duration versus the Bloomberg Global Aggregate Index.

Global Sustainable Equity* – Investment Manager's Report

Macroeconomic, market and asset class conditions during the reporting period

- Global markets rallied on fiscal and monetary stimulus, with investors looking through trade tensions; major asset classes posted positive returns and risk appetite rebounded.
- Global markets delivered broad-based gains, led by emerging markets and AI- and technology-related exposures, while currency moves helped returns for euro- and sterling-based investors.
- The performance of US equities reflected tariff pressures, AI enthusiasm and monetary policy normalisation and global bonds benefited from higher yields and a weaker dollar.

What affected the Portfolio's performance during the reporting period

- Stock selection fully explains the underperformance, with the largest negative contribution coming from the Financials sector as banks and insurers, where we were underweight, outperformed on favourable, though likely temporary, interest-rate developments, and several data providers, which we view as structural winners in this value chain, underperformed amid fears that AI could become a headwind to their businesses.
- The result from sector allocation was slightly positive, with a positive contribution from an underweight in IT and an overweight in Communication.
- At a stock level, our holdings in Alphabet (Conscious Consumer), ASML, TSMC (Digital Enterprise), Financials), Eli Lilly and Galderma (Access to Health Care) contributed most to performance.
- Our holdings in Recruit, Dassault Systemes (Digital Enterprise), UnitedHealth Group, Zoetis and Novo Nordisk (Access to Health Care) were the largest detractors from performance.

Overview of investment activities during the reporting period

- The Portfolio exited several holdings due to valuation concerns, slow growth, or elevated risks, including Moody's Corporation (Fintech & Financial Inclusion), Nordson (Digital Enterprise), Novo Nordisk (Access to Health Care) and Nike (Conscious Consumer).
- We initiated several positions in companies with high recurring revenues, such as hard discounter Dollarama (Conscious Consumer), data providers RELX (Digital Enterprise) and London Stock Exchange Group (Fintech & Financial Inclusion), and chip-design software maker Synopsys (Digital Enterprise).
- Additional positions were initiated in companies with a strong pipeline of new product launches, most notably dermatology leader Galderma (access to Health Care) and video game console and software maker Nintendo (Conscious Consumer).

* Portfolio liquidated on 17 December 2025.

Global Value – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Global equity markets had a strong rally in 2025 despite a volatility landscape shaped by economic, geopolitical, and technological events. The MSCI All Country World Index (ACW) returned 22% and though all regions posted double digit returns, the US underperformed developed international and emerging markets (EM) returns by roughly 15%.
- Asian EM, Korea, Taiwan, and China, saw AI and Semiconductors drive performance while international developed markets were boosted by USD weakness.
- Most central banks cut rates in 2025, helping temper market volatility, with the US Federal Reserve (Fed) cutting rates three times and the European Central Bank, cutting interest rates just once. The notable exception was the Bank of Japan, with a rate hike in December.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection in Communication Services.
    - Security selection in Health Care.
    - Overweight to Information Technology.
- Detractors from relative returns:
    - Security selection in Information Technology.
    - Security selection in Consumer Staples.
    - Overweight in Financials.

Overview of investment activities during the reporting period

- The Portfolio continued to overweight the IT sector with exposure focused on Hardware and Semiconductor industries, where we find many value candidates within the sector.
- The Portfolio has continued to invest in high-quality value stocks as evidenced by better quality and value metrics, such as return on equity (ROE) and price-to-earnings (P/E), compared to the MSCI ACWI Value Index.

High Yield Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished 2025 with solid returns driven by resilient economic growth and moderating inflation despite pockets of volatility brought about by tariff policy. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand.
- High yield issuers' aggregate fundamentals remained broadly stable, though some lower-quality issuers continued to face industry-specific or idiosyncratic pressures.
- Default rates remained relatively low.

Against this macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - From a sector perspective, positioning in Gas Distribution, Super Retail and Diversified Financial Services contributed the most to performance over the period. From a ratings perspective, security selection in B, CCC & below and BB rated issuers added the most to performance over the period.
- Detractors from relative returns:
    - From a sector perspective, positioning in media-broadcast, real estate & homebuilders and media-cable detracted the most. Based on ratings, the overweight in CCC and below rated issuers detracted the most but was more than offset by the positive from security selection.

Overview of investment activities during the reporting period

- In our high yield Portfolio, we rotated selectively into higher quality BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to centre the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

InnovAsia* – Investment Manager's Report

Macroeconomic, market and asset class conditions during the reporting period

- Asia growth was resilient with moderating inflation and generally easier financial conditions.
- Asia equities delivered strong returns, with leadership from South Korea and Taiwan.
- Asia technology and semiconductors outperformed, led by AI demand growth.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
  - Selection and allocation in Technology Hardware led returns.
- Detractors from relative returns:
  - Stock selection in Semiconductors.
  - Underweight to China and selection in Japan.

Overview of investment activities during the reporting period

- Reduced Japan and Southeast Asia exposure as a source of funds for increased allocation to China.
- Increased exposure to AI infrastructure companies across the supply chain.
- Reduced exposure to companies more sensitive to an uncertain trade environment.

* Portfolio liquidated on 30 September 2025.

Japan Equity Engagement – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- During the reporting period, Japanese equities delivered strong gains, with small caps outperforming larger cap benchmarks. Performance was supported by sustained inflation above the Bank of Japan's (BOJ) 2% target, continued wage growth, solid corporate profits and record-high private capex. The BOJ's policy normalisation, including hiking rates to their highest level in around three decades, periodically tempered risk appetite. A still-weak yen and a policy mix favouring fiscal support and "higher-for-longer" inflation expectations supported companies with strong pricing power, while political change reinforced expectations of further structural and governance reforms.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
  - Stock selection in Financials, IT and Communication Services contributed most.
  - Our overweight to Industrials also contributed to relative returns.
- Detractors from relative returns:
  - Stock selection in Health Care detracted most, as well as our overweight to Health Care and underweight to Materials.

Overview of investment activities during the reporting period

- The Portfolio was most overweight in Industrials and Communication Services while being most underweight in Materials and Consumer Staples, which is a result of the team's bottom-up fundamentals-driven process to investment.
- The team conducted over 500 engagement meetings across capital management, corporate governance and sustainability themes, which we believe can have a material impact on the companies' corporate value over the mid- to long-term.

Next Generation Connectivity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Global growth was modest but resilient as major central banks shifted toward easier policy, supporting risk assets.
- Equity markets delivered solid gains and market breadth improved beyond the most crowded mega-cap tech names.
- AI remained a central theme, with performance concentrated in semiconductors, cloud and data-center infrastructure as accelerating enterprise adoption lifted demand for computing.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
    - Exposure to AI infrastructure winners, including high-performance computing, data center networking, storage, and power/thermal management.
    - Security selection in Semiconductors, Electronic Equipment & Components, and Communications Equipment.
    - Asia exposure, with notable selection in China, South Korea and Japan.
- Detractors from absolute returns:
    - Weak sentiment in software and IT services, and selection in Communication Services.

Overview of investment activities during the reporting period

- Captured multiple fast-growing AI infrastructure sub-themes to participate in the strong demand uplift across the AI stack.
- Maintained a nimble approach in a volatile environment, taking profits on outperformers to lock in gains and trimming positions where near-term earnings visibility became less clear.

Next Generation Mobility – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period
Global equities delivered another year of positive returns, though regional leadership shifted. US markets remained supported by large-cap growth and technology, but international markets played a more prominent role, with select Asian and emerging economies benefiting from improving demand and policy support, while European markets benefitted from structural tailwinds in defence and an industrial revival. Building on prior years, key themes centred on the continued expansion and commercialisation of AI across sectors. As inflation eased, major central banks, led by the US Federal Reserve, moved gradually toward a more accommodative policy, while remaining data-dependent. Geopolitical tensions and shifting trade and industrial policies, including those under the renewed Trump administration, periodically weighed on sentiment but did not prevent global equities from ending the year higher.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Overweight to Industrials and underweight to Health Care and Consumer Staples versus the MSCI All Country World Index.
    - Security selection within Information Technology, Industrials and Energy.
- Detractors from relative returns:
    - Overweight to Consumer Discretionary and Information Technology and underweight to Financials versus the Index.

Overview of investment activities during the reporting period

- Additions and new positions spanning enabling technologies, infrastructure, and services, from EV and autonomous platforms to precision components and industrial equipment that improve efficiency, safety, and reliability in vehicles and transport and logistics networks.
- Positions were exited in companies where relative risk/reward was deemed less favourable or where specific market or sector challenges persisted.

Next Generation Space Economy – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period
Global equities delivered another year of positive returns, though regional leadership shifted. US markets remained supported by large-cap growth and technology, but international markets played a more prominent role, with select Asian and emerging economies benefiting from improving demand and policy support, while European markets benefitted from structural tailwinds in defense and an industrial revival. Building on prior years, key themes centred on the continued expansion and commercialisation of AI across sectors. As inflation eased, major central banks, led by the US Federal Reserve, moved gradually toward a more accommodative policy, while remaining data-dependent. Geopolitical tensions and shifting trade and industrial policies, including those under the renewed Trump administration, periodically weighed on sentiment but did not prevent global equities from ending the year higher.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Positive allocation and selection effect in Industrials, positive selection effect in IT, and positive selection effect in Communication Services.
- Detractors from relative returns:
    - Underweight to Financials (though selection was positive).

Overview of investment activities during the reporting period

- The Portfolio took, and continues to take, a barbell approach between what we believe to be growth and defensive positions. We have used dislocations as opportunities to initiate and scale both fundamentally and thematically relevant positions.

Short Duration Emerging Market Debt – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI, and continued central bank rate cuts. This was in the face of notable challenges, with the "Liberation Day" tariff announcements by the US causing major market turbulence.
- Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows. The asset class posted positive returns, driven by lower short-end US rates and tightening of EM bond spreads.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Holdings across state-owned entities in Mexico, followed by sovereign holdings in Ivory Coast and Ecuador.
    - Exposures in Colombia, where bond buybacks supported technicals, as well as holdings in Panama and Romania.
    - Yield curve positioning due to the average portfolio duration of 2.7 years as compared to the T-bill benchmark duration, and the decline in short end US treasury yields over the period.
- Detractors from relative returns:
    - Corporate exposures in Brazil detracted, driven by distressed issuers in the industrial and airlines sectors.
    - A small exposure in Senegal sovereign bonds early in the year also detracted.

Overview of investment activities during the reporting period

- The Portfolio holds a balanced mix of approximately 46% EM Corporates and 54% in EM Sovereign(-related) bonds, duration is near the upper band of the range at 2.6 years and average Portfolio rating is BBB-.
- We added exposure to high quality credits in Saudi Arabia, to sovereigns in Romania and to state-owned entities in Uzbekistan.
- We reduced exposure to China, the UAE and South Korea.

Short Duration Euro Bond – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation in the euro area continued to moderate towards, but remained somewhat above, the European Central Bank's (ECB) 2% target, the ECB moved from a prolonged pause to an easing cycle over the course of 2025. Policy rates were reduced in a series of gradual steps as growth slowed, labour markets softened at the margin and disinflation became broader based across the currency bloc. Other ECB, including the Bank of England and the Swiss National Bank, also began to lower policy rates in response to weaker activity and easing inflation pressures.
- European government bond markets experienced phases of rate volatility, reflecting shifting expectations for the pace and extent of monetary easing, as well as ongoing political and fiscal headlines in some countries. Core euro area yields declined over the year as the market priced in a more accommodative ECB stance, while peripheral spreads were generally contained, supported by the ECB's continued presence and a search for yield.
- European risk assets generally performed well over the period. Euro investment grade and high yield credit benefited from resilient corporate balance sheets, relatively low default expectations and steady demand from both domestic and international investors. Credit spreads in Europe remained tight by historical standards but were supported by the combination of improving inflation dynamics, the transition to easier monetary policy and limited new net supply in certain segments of the market, despite intermittent bouts of macro and political uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection was the lead positive driver in relative returns, in particular from our credit exposure (+30 basis points) across a variety of sectors.
    - Sector allocation was also a small positive contributor, driven by the Portfolio's overweight to corporate financials.
- Detractors from relative returns:
    - There was some detraction from the Portfolio's curve positioning, albeit overall duration impact was minimal.

Overview of investment activities during the reporting period

Over the year, we were active from a duration, geographical and credit selection perspective focusing on positioning the Portfolio defensively whilst simultaneously taking advantage of elevated all-in-yields and high carry opportunities across the European market.

Short Duration High Yield Engagement – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished 2025 with solid returns driven by resilient economic growth and moderating inflation despite pockets of volatility brought about by tariff policy. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand.
- High yield issuers' aggregate fundamentals remained broadly stable, though some lower-quality issuers continued to face industry-specific or idiosyncratic pressures.
- Default rates remained relatively low. Based on our bottom-up issuer assessment, the current risk profile appears consistent with long-term average default conditions, supported by a higher-quality high yield ratings mix (~54% of issuers rated BB), less aggressive new issuance, fewer near-term maturities, and an energy sector that is materially healthier than in prior cycles.

What affected the Portfolio's performance during the reporting period

Against the macroeconomic backdrop, the Portfolio generated a positive return for the reporting period.

- Contributors to returns:
  - From a sector perspective, positioning in Support Services, Diversified Financial Services and Health Care.
  - From a ratings perspective, positioning in B, BB and CCC and below rated issuers.
- Detractors from returns:
  - From a sector perspective, positioning in Hotels, Consumer Products and Transportation excluding Air/Rail added the least.
  - From a ratings perspective, positioning in BBB and above rated issuers.

Overview of investment activities during the reporting period

- In our high yield Portfolio, we rotated selectively into higher quality BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to centre the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we viewed as resilient in the current environment.

Strategic Income – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- As inflation continued to ease but still above the Federal Reserve's (Fed) 2% target, the Fed shifted from a prolonged hold to an easing cycle in the second half of 2025, delivering a series of 25 basis points cuts that brought the target range to 3.75% - 3.50% by year end. Other major central banks also moved policy rates lower as global growth slowed and disinflation progressed across most developed markets.
- US rates market experienced periods of volatility, with a mid-year rally followed by some backup in yields late in the fourth quarter as markets reassessed the pace and extent of future easing. For the full year, the US 10-year Treasury yield declined from 4.57% to 4.17%, while 10-year sovereign yields in markets such as Japan, Germany and Spain moved higher, underscoring mixed global rate dynamics.
- Risk assets generally performed well over the period, supported by resilient corporate fundamentals, tighter credit spreads and an improving inflation backdrop alongside the Fed's easing cycle. Investment grade credit, high yield, emerging markets (EM) and loans all delivered broadly positive returns, benefiting from steady demand for spread products despite bouts of rate volatility and lingering macro uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Allocations to high yield, securitised credit, EM debt, agency MBS, senior floating rate loans and collateralised loan obligations (CLOs), with the overweight to high yield, the single largest contributor.
    - Security selection across non-US developed markets (DM) investment grade (IG), securitised credit, EM debt and agency MBS added to performance, partly offsetting the headwind from an underweight to US IG credit and US Treasuries.
    - The Portfolio's duration positioning contributed positively versus the benchmark.
- Detractors from relative returns:
    - An underweight to and security selection in US IG credit and US Treasuries.
    - Within EM, exposure to local currency strategies was a small drag, partially offsetting positive results from hard currency EM allocations and security selection.

Overview of investment activities during the reporting period

- We reduced exposure to select currency positioning (mainly JPY/USD) and bank loans, and we increased exposure to EM debt, non-US DM government bonds, IG credit, nominal US Treasuries, securitised credit, high yield, CLOs and agency MBS.
- We increased the Portfolio's duration to the headline level by 0.86 years, closing the year at a duration of 4.94 years.

Sustainable Asia High Yield* – Investment Manager's Report

Macroeconomic, market and asset class conditions during the reporting period

- Credit markets navigated a year of meaningful macro cross currents, including the rollout of trade tariffs by the US Administration, a sustained soft patch in Chinese domestic economy and rising geopolitical tensions.
- Despite this backdrop, Asian credits delivered yet another strong positive performance in 2025. The continued rate cuts by the Federal Reserve and several Asian central banks, resilient global growth and strong fundamentals within the Asian markets, coupled with supportive technical factors, led to a material tightening of credit spreads over the year.
- The spillover from China's property downturn continued to moderate, as the remaining developers were generally stronger and had adapted by shifting their city-tier focus and diversifying funding channels. Hence, Asia High Yield default rate declined materially for the third consecutive year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Our underweight exposure to Philippines contributed positively as the country's bonds lagged the overall spread compression given their rich valuations.
    - Our overweight exposure to Financial tiered capital in the region added to performance as the sector outperformed on the back of an attractive rating-adjusted carry profile.
    - Our overweight exposure to Macau added to relative returns as gaming names rallied on the back of robust revenue bookings and continued deleveraging trend.
- Detractors from relative returns:
    - Our underweight exposure to Indonesia detracted as large-weighted benchmark names in Oil & Gas and Metals & Mining sectors are excluded due to the Portfolio's sustainable guidelines.

Overview of investment activities during the reporting period

- We maintained a bias towards the frontier Sovereigns and Quasi-Sovereigns, India Financials and Macau gaming throughout the year, utilising periods of widening spread and market weakness to tactically add risk, including during the second quarter around Liberation Day. We increased China exposure in the second quarter but shifted towards a more cautious stance towards the end of the year. In the Sovereign space, we selectively extended exposure to frontier markets like Mongolia and Sri Lanka, as the macro outlook continued to improve and valuations remained compelling.

* Portfolio liquidated on 1 December 2025.

Sustainable Emerging Market Debt - Hard Currency – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Financial assets saw solid gains in 2025, driven by sustained global growth, ongoing optimism around AI and continued central bank rate cuts. Emerging markets (EM) benefited from stronger terms of trade, improved fundamentals and renewed capital flows.
- This was in the face of notable challenges. Liberation Day tariff announcements caused major market turbulence. German fiscal stimulus led to the largest rise in 10-year bund yields since 1990. Gold and silver surged over inflation and currency debasement concerns, marking biggest annual gains since 1979.
- Two defaulted names, Lebanon and Venezuela, benefited from investor optimism around political changes leading to an eventual debt resolution.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection, driven by euro-denominated exposures in Ivory Coast and Romania, and GDP-linked securities in Ukraine.
    - Country allocation, driven by overweight allocations to higher yielding markets, such as Ivory Coast, and underweight allocations to low-risk countries, such as Uruguay.
- Detractors from relative returns:
    - Large underweight to spread duration.
    - Positioning in Argentina, which suffered volatility around elections.
    - Absence from high yielding Egypt and Ecuador (in the first half of the year) as both are excluded under the Portfolio's sustainable guidelines.

Overview of investment activities during the reporting period

- The Portfolio maintained a high yield bias over investment grade (IG) credits. We have selectively reduced risk following strong performance and rising risks in Colombia, Indonesia and Ukraine.
- At the same time, we added to positions where we see improving fundamentals and positive reform momentum, increasing exposure to Honduras and Oman, ahead of its return to IG. We sold out of Bulgaria and Ghana in the middle of the year and added to Ecuador and Paraguay due to changes in ESG performance.
- Allocation to EUR-denominated bonds and corporate bonds was 17.6% and 11.8% respectively at the end of the reporting period.

Tactical Macro – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Global equities and bonds experienced renewed volatility over 2025 as persistent, though moderating, inflation and uneven growth kept uncertainty elevated. After a choppy first quarter, risk assets strengthened over the balance of the year, helped by a weaker US dollar, resilient corporate earnings, and particularly strong performance in AI-exposed technology and select emerging markets (EM), including Korea, Taiwan, and China.
- Major central banks followed increasingly divergent paths over the year. The Federal Reserve held policy rates steady through mid-2025 before delivering an initial cut in September as inflation eased toward, but remained above, target and labour market conditions cooled. In contrast, the European Central Bank and Bank of England moved earlier and more cautiously toward easing in response to clearer disinflation and softer activity, while the Bank of Japan continued its gradual normalisation process and EM central banks selectively lowered rates as domestic inflation pressures receded.
- Earnings remained broadly resilient, led by technology and defense, where ongoing AI, digital infrastructure, and security investment supported robust profit growth, while more cyclically sensitive sectors lagged amid slower global demand. EM assets delivered some of the strongest full-year returns in both equities and hard-currency sovereign bonds, supported by falling borrowing costs, tighter spreads, and improved external balances, even as performance varied across countries depending on policy responses and local inflation trends.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
    - The largest contributors were differently timed trades related to both long and short exposures in US 10-year Treasuries along with short USD positions.
- Detractors from absolute returns:
    - The largest detractors were select S&P 500 Put Options, along with a short Canadian 10-year bond position.

Overview of investment activities during the reporting period

- In the first quarter, the Portfolio navigated growing policy uncertainty and rotating regional performance, profiting from short dollar positions and exposures to the US 10-year Treasury, but faced challenges with S&P 500 Put Options and the short Canadian 10-year position.
- The second quarter saw heightened volatility amid continued global and policy uncertainty, yet the Portfolio took profits from long Korean equity and long Euro positions, while long Russell 2000 Call Options and US 2-year exposures detracted.
- In the third quarter, the Portfolio benefited from well-timed US front-end rate positioning, long Korean equity exposure, and a growing long gold/short dollar complex, but faced headwinds from select FX shorts versus the dollar, TOPIX exposure, and repeated Russell 2000 and Euro option hedges that lagged the momentum-driven equity rally.
- The fourth quarter saw more modest results as active macro fixed income and long gold trades supported performance, alongside recovering short dollar/long BRL and Euro option positions, while residual FX exposures and Nasdaq option structures detracted, and overall risk levels were kept deliberately low.

Uncorrelated Strategies – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- 2025 saw risk assets deliver another year of positive returns, albeit with a very different regional pattern to prior years as Emerging Markets (EM) led performance and Developed Markets were more mixed. US equities advanced again, with the S&P 500 Index posting a high-teens gain for the year, while EM delivered their strongest calendar-year return since 2017, helped by exceptional strength in Korea and Taiwan alongside robust gains in China and India. European and UK markets delivered solid, if less spectacular, local-currency returns but benefited meaningfully from currency effects, with euro strength versus the dollar lifting euro-based equity returns into the low-20s for the year. Japan's equity market remained underpinned by multiple expansion, solid earnings and ongoing corporate governance reforms, even as domestic bond yields continued to normalise, and the 10-year Japan Government Bond rose to its highest level since 1999.
- Across global rates, long-dated government bond yields in the major G7 markets drifted higher over the year, with German 10-year Bund yields ending at their highest levels since 2023, while Japanese yields moved sharply higher as the Bank of Japan's policy framework evolved.
- The dollar weakened materially in 2025, with the DXY Index falling around 9% – its largest annual fall in the post-crisis period – providing a tailwind to non-US assets. Despite there being pockets of volatility around the tariff rhetoric witnessed in the first half of the year, there was very little follow-through in asset prices, with equities quickly retracing losses from the April shock and ending the year with strong gains, resulting in a limited opportunity set for managers that benefit from elevated volatility.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
    - Statistical Arbitrage (+1.28%), Trend Following (+1.01%), Equity Market Neutral (+0.10%), Insurance-Linked Securities (+0.06%).
- Detractors from absolute returns:
    - Short Term Trading (-4.48%), Global Macro (-1.03%), Volatility Relative Value (-0.52%).

Overview of investment activities during the reporting period

- The systematic macro allocation was reduced in weight in the second quarter, and at the same time, discretionary macro was upweighted.
- Convertible bond arbitrage has been reduced within the volatility book and has been replaced with newer convex credit strategies.

US Equity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The market rallied sharply in 2025, reaching several new all-time highs. The market's ascent was partially due to an overall resilient economy, several Federal Reserve (Fed) rate cuts and generally solid corporate earnings.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
  - Overall sector allocation; in particular, an overweight to Communication Services and an underweight to Industrials were the most additive.
  - In terms of stock selection, holdings in the Industrials and Health Care sectors were the most beneficial.
  - Individual stocks that contributed to relative performance included overweight positions in NVIDIA Corp, Alphabet Inc Class A and Broadcom Inc.
- Detractors from relative returns:
  - Overall stock selection, driven by holdings in the IT and Communication Services sectors.
  - In terms of sector allocation, an overweight in Consumer Discretionary and an underweight in Industrials were the largest detractors.
  - Individual stocks that were negative for the Portfolio's relative performance included overweight positions in Salesforce Inc, Trade Desk Inc Class A and HubSpot Inc.

Overview of investment activities during the reporting period

We made several adjustments on the margin throughout the reporting period. At the end of the period our largest overweight allocations relative to the S&P 500 Index were Communication Services and IT, while the largest underweights were Financials and Health Care.

US Equity Premium – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- Global equities advanced in 2025, with the S&P 500 Index (the Index) returning 17.88% for the year, supported by an AI-related rally and strong performance from large US Technology and Communication Services companies, even as intra-year drawdowns were substantial.
- Market volatility was elevated but episodic: the Index experienced a peak-to-trough drawdown of roughly 19% and the Cboe Volatility Index (VIX) briefly spiked above 60 in April before ending the year near 13, with implied volatility generally exceeding realised volatility over the period.
- The Federal Reserve (Fed) cut policy rates by a total of 75 basis points in 2025, and core fixed income and high yield credit generated positive returns, helping to create a backdrop in which options could be used as an income complement rather than primarily as crisis hedges.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - The Index options sleeve added a substantial 8.03%, complemented by a 4.22% contribution from the collateral Portfolio.
- Detractors from relative returns:
    - There were no detractors during the reporting period.

Overview of investment activities during the reporting period

- The Portfolio's average option notional exposure over the period remained consistent with strategic target of 100% the Index.

US Large Cap Value – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The market rallied sharply in 2025, reaching several new all-time highs. The market's ascent was partially due to an overall resilient economy, several Federal Reserve (Fed) rate cuts and generally solid corporate earnings.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
  - Stock selection, overall, significantly contributed to relative performance, driven by holdings in the Materials and Financials sectors.
  - Individual stocks that contributed the most included an overweight in Southern Copper, Wheaton Precious Metals, and Agnico Eagle.
  - From a sector positioning perspective, underweights to Real Estate and Consumer Discretionary were marginal contributors to relative performance.
- Detractors from relative returns:
  - Sector allocation, overall, detracted from relative performance. In particular, underweights to Communication Services and IT were the largest detractors.
  - In terms of stock selection, holdings in the Utilities and Energy sectors were marginal headwinds for relative returns.
  - Individual stocks that detracted the most from relative performance included overweight positions in EOG Resources and Linde and not owning/underweight Alphabet Class A/Alphabet Class C.

Overview of investment activities during the reporting period

- At the end of the period the Portfolio's largest overweight versus the Russell 1000 Value Index (Net of Tax) were Materials and Energy; its largest underweights were IT and Communication Services.

US Long Short Equity – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The market rallied sharply in 2025, reaching several new all-time highs. The market's ascent was partially due to an overall resilient economy, several Federal Reserve (Fed) rate cuts and generally solid corporate earnings.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
  - Longs in the Industrials and Consumer Staples sectors contributed the most.
  - Equity short positions in the Consumer Discretionary and Industrials sectors.
- Detractors from relative returns:
  - Equity long positions, overall, detracted with long positions in the IT and Consumer Discretionary sectors being the largest headwinds.
  - No equity short positions meaningfully detracted from relative performance.

Overview of investment activities during the reporting period

- Net Portfolio exposure increased incrementally to around 40-45% net long, while gross notional exposure increased to around the 135-140% area.
- Total Fundamental Short exposure increased, led by shorts in the Consumer Staples and IT sectors.
- Market Short exposure related to hedging activity increased.

US Multi Cap Opportunities – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The S&P 500 Index delivered double-digit performance for the third consecutive year.
- US equity markets proved resilient in 2025, delivering strong returns despite periods of elevated volatility resulting from tariff developments, evolving interest rate expectations and AI related trends.
- Uncertainty driven by trade negotiations earlier in the year eased following positive developments related to tariff negotiations. This included framework agreements and extensions between the US and key global trading partners.
- Moderating inflation and the prospect of lower interest rates further supported equity market optimism.
- Corporate earnings growth was solid and largely exceeded expectations.

What affected the Portfolio's performance during the reporting period

- The investment team is pleased with the absolute performance of the Portfolio, which achieved strong double-digit performance for the third consecutive year.
- The Portfolio navigated periods of elevated uncertainty during 2025 and delivered solid returns, achieving a positive return in 8 of 10 sectors (no exposure to Real Estate).
- Contributors to relative total returns:
    - Positive stock selection within the Consumer Discretionary, Consumer Staples, Financials, and Health Care sectors.
    - An overweight position to Industrials, underweights to Energy and Health Care, and having zero exposure to the Real Estate sector.
- Detractors from relative total returns:
    - Given the Portfolio's multi-cap approach, the persistence of concentrated index returns and narrow market breadth weighed on performance.
    - Stock selection within the IT and Materials sectors detracted, as did an underweight to the IT sector.

Overview of investment activities during the reporting period

- The Portfolio finished the period overweight Consumer Discretionary, Financials, and Industrials, underweight Health Care and IT and had no exposure to Energy or Real Estate.

US Real Estate Securities – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- 2025 proved to be an eventful year for markets. In the first half, equities neared bear-market territory amidst tariff uncertainty, policy shifts and lingering inflation, but by year-end the S&P 500 Index had reached new highs, led again by large-cap growth stocks, Communication Services and Technology.
- The Federal Reserve cut rates three times, easing financial conditions and supporting a "risk-on" tone, while signalling that further cuts would depend on data given sticky inflation and soft labour indicators.
- The US economy remained broadly resilient, supported by stronger financial markets and healthier balance sheets for higher-income households even as lower- and middle-income consumers faced pressure from higher borrowing costs and elevated living expenses.
- All told, the S&P 500 Index returned 17.88% during the reporting period, driven by mega-cap, AI-oriented growth leaders. In contrast, the FTSE NAREIT All Equity REITs Index (Net of Tax) (the Index) returned 1.04%, as real estate securities remained more exposed to higher-for-longer interest rates, elevated financing costs and investor caution in select property sectors.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Security selection within Health Care.
    - Security selection within Industrial.
    - Overweight to Health Care and cash holdings.
- Detractors from relative returns:
    - Security selection within Free Standing.
    - Security selection within Specialty.
    - Underweight to Industrial and Lodging/Resorts.

Overview of investment activities during the reporting period

While the Portfolio's sector positioning was mainly driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were to Telecommunication REITs and Manufactured Homes. In contrast, the Portfolio's largest sector underweights relative to the Index were in the Industrial and Lodging/Resorts sectors.

US Small Cap – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- The small-cap market was highly speculative throughout 2025. Within the Russell 2000 Index, the most volatile (highest beta), lowest quality (non-earners and lowest levels of ROE), momentum-driven (highest sales growth), and speculative (low stock prices) stocks significantly outperformed. Frustratingly, the market's appetite for risk put continual pressure on our Portfolio and higher-quality small-cap companies in general.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
    - Sector allocation overall was positive, primarily due to an overweight in the Industrials sector.
- Detractors from relative returns:
    - In this market environment characterised by rampant speculation, our high-quality focused Portfolio underperformed due to negative stock selection in all sectors, a phenomenon we have seen historically, when lower quality, more speculative companies are in favour.
    - Within Industrials, our Construction & Engineering, Trading Companies & Distributors, and Building Product names were the largest detractors. Our lack of speculative AI-linked Electrical Equipment and next generation Aerospace & Defence companies represented material drags on relative performance.
    - Within Technology sector, our Software and Semiconductor stocks continue to hurt relative results. Our lack of companies related to speculative themes such as AI, Quantum Computing and Crypto Currency, that drove index returns, hurt relative results. We view most of the companies in these areas as low-quality (unprofitable with low returns on equity) and therefore do not fit our investment criteria.

Overview of investment activities during the reporting period

- We trimmed our exposure to the Consumer Discretionary sector, as this area of the market remains under pressure due to a softening labour market, consumer credit concerns, and weak housing demand.
- We continued to build our utilities exposure driven by the prospects of durable, yet accelerating earnings growth driven by data centre growth, reindustrialisation and aging infrastructure.

US Small Cap Intrinsic Value – Investment Manager's Report

Performance for all share classes is provided in Appendix III.

Macroeconomic, market and asset class conditions during the reporting period

- While the AI investment wave was a significant theme in 2025, many debate whether the billions being spent by Google, Microsoft and others on AI infrastructure will earn a fair return and when the breakneck pace of capital spending will slow.
- In our view, there's no letup in sight nor tangible proof that returns from AI initiatives will disappoint. Large enterprises are aggressively underwriting AI projects, not simply out of fear of missing a yet to be defined business case, but as a clear and tangible productivity driver. A recent study commissioned by Kyndryl, the mainframe services spinoff from IBM and one of our largest investments, highlights the enthusiasm behind investing in AI projects. Kyndryl surveyed 500 IT managers at the largest companies in the world. Collectively, they anticipate generating returns north of 300 percent on their AI and related investments. Benefits range from cost savings, fraud detection, performance optimisation and importantly increased revenues.
- Everything we see points to both a fifth industrial revolution spawning new opportunities and massive productivity gains as well as a financial and market cycle that will ultimately claim its share of disappointed investors.

What affected the Portfolio's performance during the reporting period

- Contributors to total returns:
    - The Portfolio's AI beneficiaries (including Ciena, Vistra, MACOM, Coherent, Rambus and Bloom) generated strong returns which helped both absolute and relative performance.
    - The Portfolio also benefitted from a significant recovery in several long-term investments that until 2025 had been rather disappointing (Enviri, ViaSat, Resideo and Tetra Technologies). We often question the time we commit to our laggard companies, so it was encouraging to see the payoff with these four investments.
- Detractors from total returns:
    - If we look at what didn't work in 2025 there is a clear set of perceived AI "victims" – companies whose business models and value added are viewed as vulnerable to disruption.
    - The laggards are an eclectic group – software companies, business process outsourcers, healthcare and consumer staples companies. Basically, there were the perceived AI victims (Criteo, Conduent, Alight, Wix.com), those adversely impacted by the Government shutdown (KBR, Ribbon Communications) and Ozempic (GLP-1)/Make America Healthy Again casualties (TreeHouse Foods, Hain Celestial). With healthcare, the fears revolved around the prospect of drug price controls and eventual reimbursement challenges (Acadia Healthcare, Integra Lifesciences).

Overview of investment activities during the reporting period

- Mindful of past booms when large capital investment periods peaked, we harvested more than half of our gains from AI beneficiaries. However, continued appreciation resulted in us exiting the year with a similar 13 percent weighting to the AI trade. Our current plan is to continue to gradually rebalance the Portfolio between momentum and valuation over the coming year.
- In aggregate we rebalanced about 32% of the Portfolio in 2025. We trimmed our strong performers and redeployed capital where contrarian opportunities persist – healthcare, AI victims and utilities.

Absolute Return Multi Strategy - Schedule of Investments

NOTES TO THE AUDITED FINANCIAL STATEMENTS

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES

The significant accounting policies adopted by the Company are as follows:

Basis of Preparation of Financial Statements

The financial statements are prepared in accordance with Financial Reporting Standard ("FRS") 102: 'The financial reporting standard applicable in the UK and Republic of Ireland'. Accounting standards generally accepted in Ireland in preparing financial statements giving a true and fair view are those published by the Chartered Accountants Ireland and issued by the Financial Reporting Council ("FRC"). The financial statements are also prepared in accordance with Irish Statute comprising the Companies Act 2014 (as amended), the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended and the Central Bank (Supervision and Enforcement) Act 2013 (section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations").

The financial statements are prepared under the historical cost convention as modified by the revaluation of the financial assets and financial liabilities held at fair value through profit and loss. Valuation time is market close on the relevant dealing day. The dealing day is each business day or such other day as the Directors may determine and notify to the administrator and to the shareholders in advance. The Directors have made an assessment of the Company's ability to continue as a going concern and are satisfied that the Company has the resources to continue in business for the foreseeable future and at least 12 months from the date these financial statements were approved. Furthermore, the Directors are not aware of any material uncertainties that may cast significant doubt upon the Company's ability to continue as a going concern. Therefore, the financial statements are prepared on the going concern basis. The China Bond, InnovAsia, Sustainable Asia High Yield, European Sustainable Equity, Global Sustainable Equity and Absolute Return Multi Strategy Portfolios which liquidated in a prior years and were pending revocation by the Central Bank of Ireland as at year-end. Financial statements continue to be prepared for these Portfolios as they held residual assets and liabilities at the balance sheet date.

The format and certain wordings of the financial statements have been adapted from those contained in the Companies Act 2014 (as amended) and FRS 102 so that, in the opinion of the Directors, they more appropriately reflect the nature of the Company's business as an investment fund. The Company meets the criteria to avail of the exemption available to certain open-ended investment funds under FRS 102 and US GAAP not to prepare a cash flow statement.

The preparation of financial statements in conformity with FRS 102 requires the use of certain critical accounting estimates. It also requires the Board of Directors to exercise its judgement in the process of applying the Company's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the financial statements, such as taxation or going concern assumption are disclosed in the following notes. Information about assumptions and estimation uncertainties that have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the year ended 31 December 2025 and 31 December 2024 is included in Note 12 and relates to the determination of fair value of financial instruments with significant unobservable inputs.

Financial Assets and Financial Liabilities at Fair Value through Profit or Loss

(i) Classification

The Company has chosen to apply the recognition and measurement provisions of International Financial Reporting Standard 9 "Financial Instruments" ("IFRS 9"), and the disclosure and presentation requirements of FRS 102 to account for all the financial instruments. In accordance with IFRS 9, on initial recognition, the Company classifies financial assets as measured at amortised cost or fair value through profit or loss. A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at fair value through profit or loss: (a) it is held within a business model whose objective is to hold assets to collect contractual cash flows; and (b) its contractual terms give rise on specified dates to cash flows that are SPPI (Solely payments of principal and interest). All other financial assets of the Portfolios are measured at fair value through profit or loss. The Company has classified its investments as financial assets or financial liabilities at fair value through profit or loss. All derivatives in a receivable position (positive fair value) are included in financial assets at fair value through profit or loss. All derivatives in a payable position (negative fair value) are included in financial liabilities at fair value through profit or loss.

Financial assets that are not at fair value through profit or loss include certain balances due from brokers and accounts receivable which are measured at amortised cost.

Financial liabilities that are not at fair value through profit and loss include certain balances due to brokers and accounts payable which are measured at amortised cost.

(ii) Initial Measurement

Purchases and sales of financial instruments are accounted for at trade date for financial statement purposes. Realised gains and losses on disposals of financial instruments are calculated using the first in first out method. Financial instruments categorised as financial assets at fair value through profit or loss are measured initially at fair value with transaction costs for such instruments being recognised directly in the Profit and Loss Account.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Financial Assets and Financial Liabilities at Fair Value through Profit or Loss (continued)

(iii) Subsequent Measurement

After initial measurement, the Company measures financial instruments classified as financial assets at fair value through profit or loss, at their fair values. Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction. The fair value of financial instruments is based on their official quoted market price on a recognised exchange or sourced from a reputable broker/counterparty in the case of non-exchange traded instruments, at the balance sheet date without any deduction for estimated future selling costs. In accordance with IFRS 9 the Company's securities and other assets are valued at the last traded price as at 31 December 2025 and 2024 to determine the Net Assets Attributable to Holders of Redeemable Participating Shares ("Net Assets").

However, the Directors may adjust the value of financial assets if it considers such adjustment is required to better reflect the fair value thereof. If a quoted official market price is not available on a recognised stock exchange or from a broker/counterparty, the probable realisation of value shall be calculated with care and in good faith in accordance with the Company's valuation policy. Such probable realisation values may be determined by the Administrator using valuation techniques, including use of recent arm's length market transactions, reference to the current fair value of another instrument that is substantially the same, discounted cash flow techniques, option pricing models or any other valuation technique that provides a reliable estimate of prices obtained in actual market transactions. For more details on valuation policies for all security types please refer to "Fair Value of Investments" section in Note 12. Subsequent changes in the fair value of financial instruments at fair value through the profit or loss are recognised in the Profit and Loss Account.

(iv) Derecognition of Financial Assets and Liabilities

The Company derecognises a financial asset when the contractual rights to the cash flows from the financial asset expire or when the financial assets are transferred and the transfer qualifies for derecognition in accordance with IFRS 9. The Company derecognises a financial liability when the obligation specified in the contract is discharged, cancelled or expires.

Real Estate Investment Trusts

Units or shares in real estate investment trusts will be valued, if listed or traded on a regulated market, at the last quoted trade price or the mid quotation or, if unavailable or unrepresentative, the latest available Net Asset Value ("NAV") as deemed relevant to the collective investment scheme.

Investment Funds

The fair value of any investment which is a unit of or participation in an investment fund is the latest available NAV of such unit or participation.

Term Loans

Certain Portfolios may invest in direct debt instruments which are interests in amounts owed by corporate, governmental, or other borrowers to lenders or lending syndicates. A Portfolio's investments in loans may be in the form of participations in loans or assignments of all or a portion of loans from third parties ("Bank Loan"). A Bank Loan is often administered by a bank or other financial institution (the "Lender") that acts as agent for all holders. The agent administers the terms of the loan, as specified in the loan agreement. When investing in a loan participation, a Portfolio has the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the loan agreement and only upon receipt by the lender of payments from the borrower. A Portfolio generally has no right to enforce compliance with the terms of the loan agreement with the borrower. As a result, a Portfolio may be subject to the credit risk of both the borrower and the lender that is selling the loan agreement. When a Portfolio purchases assignments from lenders it acquires direct rights against the borrower of the loan.

The Portfolio may have difficulty trading assignments and participations to third parties. There may be restrictions on transfers and only limited opportunities may exist to sell such securities in secondary markets. As a result, the Portfolio may be unable to sell assignments or participations at the desired time or may be able to sell only at a price less than fair value.

The Portfolio may enter into a loan agreement for a certain committed amount, however the full amount of this commitment may not be drawn down by the borrower. These unfunded commitments represent the remaining obligation of the Portfolio to the borrower. At any point in time, up to the maturity date of issue, the borrower may demand the unfunded portion. The fair value of these unfunded loan commitments is included in Balance Sheet under "Income receivable and other assets".

Participatory Notes

The Portfolios may invest in participatory notes. Participatory notes which are fully paid up and have a zero strike price, exhibit the identical risk and return characteristics as in the case where the Portfolio had acquired the underlying equity directly.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Asset Backed Securities and Mortgage Backed Securities

Inputs used to value asset backed securities and mortgage backed securities generally include models that consider a number of factors, which may include the following: prepayment speeds, cash flows, spread adjustments and other market information, which may include benchmark yields, reported trades, broker-dealer quotes, issuer spreads, benchmark securities, bids, offers, and reference data, such as market research publications, when available.

To Be Announced Securities

The Portfolios may enter into To Be Announced ("TBA") purchase commitments to purchase securities for a fixed unit price at a future date beyond customary settlement time. Although the unit price has been established, the principal value has not been finalised. The Portfolio holds and maintains until settlement date, cash or high grade debt obligations in an amount sufficient to meet the purchase price, or the Portfolio may enter into offsetting contracts for the forward sale of other securities that they own. Income on the securities will not be earned until settlement date. Unsettled TBA purchase commitments are valued at the current market price.

The Portfolios may enter into TBA sale commitments to hedge their portfolio positions or to sell mortgage backed securities they own under delayed delivery arrangements. Proceeds of TBA sales commitments are not received until the contractual settlement date. During the time a TBA sale commitment is outstanding, equivalent deliverable securities or an offsetting TBA purchase commitment deliverable on or before the sale commitment date, are held as "cover" for the transaction. Unsettled TBA sale commitments are valued at current market value, generally according to the procedures described previously in the accounting policies.

Forward Currency Contracts

A forward currency contract is an agreement between two parties to buy and sell a currency at a set price on a future date. The market value of a forward currency contract fluctuates with changes in forward currency exchange rates. Forward currency contracts are marked to market daily and the change in value is recorded by the Portfolio as an unrealised gain or loss. Realised gains or losses equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed are recorded upon delivery or receipt of the currency or, if a forward currency contract is offset by entering into another forward currency contract with the same broker, upon settlement of the net gain or loss.

Futures Contracts

Futures contracts may include certain options on exchange-traded futures contracts. Initial margin deposits are made upon entering into futures contracts and are generally made in cash and cash equivalents. The fair value of futures contracts is based upon their quoted daily settlement prices. Changes in the value of open futures contracts are recognised as unrealised gains or losses on futures contracts until the contracts are terminated, at which time realised gains and losses are recognised. Gains or losses on open futures contracts are shown in the Schedule of Investments of each relevant Portfolio and as appropriate, on the Balance Sheet as financial assets/financial liabilities at fair value through profit or loss.

Swap Contracts

A swap contract is a privately negotiated agreement between a Portfolio and a counterparty to exchange or swap the return generated by one instrument for the return generated by another instrument. Some swap contracts are net settled. When entering into an over-the-counter ("OTC") swap contract and during the term of the transaction, the Portfolio and/or the swap counterparty may post or receive cash or securities as collateral in accordance with the terms of the respective swap agreements to provide assets of value and recourse in the event of default or bankruptcy/insolvency. Certain clearinghouses currently offer clearing for limited types of swaps. In a cleared swap transaction, a Portfolio typically enters into the transaction with a financial institution counterparty that is then cleared through a central clearinghouse. Upon acceptance of a swap by a central clearinghouse, the original swap is extinguished and replaced with a swap with the clearinghouse, thereby reducing or eliminating the Portfolio's exposure to the credit risk of the original counterparty.

A Portfolio typically will be required to post specified levels of both initial and variation margin with the clearinghouse or at the instruction of the clearinghouse. The daily change in valuation is recorded as a receivable or payable for variation margin and settled in cash with the centrally clearing party.

Interest Rate/Inflation Swaps

A Portfolio may enter into interest rate or inflation swap contracts which are arrangements between two parties to exchange cash flows based on a notional principal amount, to manage a Portfolio's exposure to interest rates. Under the terms of both interest rate swaps and inflation swaps, a party agrees to pay the swap counterparty a fixed-rate payment in exchange for the other party paying the Fund a variable-rate payment. Interest rate swap and inflation swap contracts are marked-to-market daily based in some cases on quotations from counterparties and in other cases from pricing services and the change in value, if any is recorded as an unrealised gain or loss. Payments made or received are recorded as part of realised gains and losses. Some interest rate swaps can be considered as forward starting swaps. Accruals on forward starting swaps begin at a future date.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Swap Contracts (continued)

Credit Default Swaps
A credit default swap is a bilateral financial contract under which the protection buyer pays a fee, usually expressed in basis points per annum on the notional amount, in return for a payment by the protection seller contingent on the occurrence of a credit event, such as a bankruptcy, default, or restructuring, with respect to a referenced entity. The credit events and applicable settlement mechanism used to determine the contingent payment are negotiated between the counterparties at the time of trading.

Once the credit event has been declared, the protection buyer has the right to settle the contract. Settlement is usually physical, with the protection buyer having the right to deliver bonds of the reference entity up to the notional amount of the contract. In return, the protection buyer receives the par value of those obligations. Selling protection is the synthetic equivalent of buying a bond or alternative form of debt. Buying protection is the equivalent of synthetically shorting or hedging a bond or other credit exposure. Credit default swap agreements on credit indices involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a write-down, principal shortfall, interest shortfall or default of all or part of the reference entities comprising the credit index. A credit index is a list of a basket of credit instruments or exposures designed to be representative of some part of the credit market as a whole. Components of the indices may include, but are not limited to, investment grade securities, high yield securities, asset backed securities, emerging markets, and/or various credit ratings within each sector. Credit indices are traded using credit default swaps with standardised terms including a fixed spread and standard maturity dates. An index credit default swap references all the names in the index, and if there is a default, the credit event is settled based on that name's weight in the index. The composition of the indices change periodically, usually every six months, and for most indices, each name has an equal weight in the index.

The use of credit default swap contracts is restricted to the extent that the benefits to a Portfolio mirror that which could be obtained by direct investment in the underlying instruments and that the swaps do not expose a Portfolio to risks which it would not otherwise assume (other than the exposure to the credit default swap counterparty). The upfront payment received by a Portfolio, as protection seller, is recorded as a liability on the Portfolio's books. An upfront payment made by a Portfolio, as protection buyer, is recorded as an asset on the Portfolio's books. Payments received or paid by a Portfolio are recorded as realised gains or losses. Credit default swaps are valued using a pricing service provider. Where no pricing service provider is available, contracts may be marked-to-market daily based upon quotations received from counterparties or based upon calculations using valuation models and the change, if any, is recorded as an unrealised gain or loss. Payments received or paid as a result of a credit event or termination of the contract are recognised, net of a proportional amount of the upfront payment, as realised gains or losses.

Total Return Swaps
Total return swaps involve commitments to pay fixed or floating rate interest in exchange for a market-linked return based on a notional amount. To the extent the total return of the reference security or index underlying the total return swap exceeds or falls short of the offsetting interest rate obligation, a Portfolio will receive a payment or make a payment to the counterparty, respectively. Certain risks may arise when entering into total return swap transactions, including counterparty default, liquidity or unfavorable changes in the value of the underlying reference security or index. Cash settlement in and out of the swaps may occur at a reset date or any other date, at the discretion of the Portfolio and the counterparty, over the life of the agreement, and is generally determined based on limits and thresholds established as part of an agreement between the Portfolio and the counterparty. For basket swaps, the cash flows may be denominated in various foreign currencies based on the local currencies of the positions within the swaps.

Changes in valuations, if any, are recorded as unrealised gains or losses. Payments received or made are recorded as realised gains or losses. The Company discloses outstanding total return swap contracts at the year end in the Schedule of Investments. For the years ended 31 December 2025 and 31 December 2024, the fair value of total return swaps is disclosed in the Schedule of Investments and Balance Sheet as net unrealised gain or loss.

Volatility Swaps
A volatility swap is an agreement between counterparties to exchange periodic payments based on the measured volatility of a reference security, index, currency or other reference investment over a specified time frame. One cash flow is typically based on the realised volatility of the reference investment as measured by changes in its price or level over the specified time period while the other cash flow is based on a specified rate representing expected volatility for the reference investment at the time the swap is executed, or the measured volatility of a different reference investment over the specified time period. The appreciation or depreciation on a volatility swap will typically depend on the magnitude of the reference investment's volatility, or size of the movements in its price, over the specified time period, rather than general directional increases or decreases in its price.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Swap Contracts (continued)

Volatility swaps are less standard in structure than other types of swaps and provide pure, or isolated, exposure to volatility risk of the specific underlying reference investment. Volatility swaps are typically used to speculate on future volatility levels, to trade the spread between realised and expected volatility, or to decrease the volatility exposure of investments held by the Portfolio.

Variance Swaps
Variance swap contracts involve an agreement by two parties to exchange cash flows based on the measured variance (or square of volatility) of a specified underlying asset. One party agrees to exchange a "fixed rate" or strike price payment for the "floating rate" or realised price variance on the underlying asset with respect to the notional amount. At inception, the strike price chosen is generally fixed at a level such that the fair value of the swap is zero. As a result, no money changes hands at the initiation of the contract. At the expiration date, the amount payable by one party to the other is the difference between the realised price variance of the underlying asset and the strike price multiplied by the notional amount. A receiver of the realised price variance would be entitled to receive a payment when the realised price variance of the underlying asset is greater than the strike price and would be obligated to make a payment when that variance is less than the strike price. A payer of the realised price variance would be obligated to make a payment when the realised price variance of the underlying asset is greater than the strike price and would be entitled to receive a payment when that variance is less than the strike price. This type of agreement is essentially a forward contract on the future realised price variance of the underlying asset.

Correlation Swaps
A Correlation Swap is a contract in which the option buyer receives the difference between the observed correlation and the strike correlation on a basket of assets, observed over a specified time interval. The correlation swap can be thought of as a forward contract on realised correlation. Its payoff is simply the difference between the realised correlation over the stated period and the strike times the notional of the contract. Due to the nature of the contract, as maturity approaches, the payoff is almost known since all the observations for calculating the correlation are almost known. Therefore, the model risk decreases as the contract moves toward maturity. For an outstanding contract, implied correlation needs to be computed for any future correlations that can be thought of as the market price of future correlation. The implied correlation or correlation mark can be backed out from observed correlation swap prices of from OTC dealer quotes.

Options

Option contracts may include certain options on exchange-traded futures contracts. When a Portfolio writes an option, an amount equal to the premium received by the Portfolio is recorded as a liability and the current fair value of the option written is subsequently adjusted by this amount. The premium on written call options exercised is added to the proceeds from the sale of the underlying security or foreign currency in determining the realised gain or loss. The premium on written put options exercised is subtracted from the cost of the securities, indices, derivatives or foreign currencies purchased. Premiums received from written options which expire are treated as realised gains. The premium on purchased put options exercised is subtracted from the proceeds of the sale of the underlying security or foreign currency in determining the realised gain or loss. The premium paid on purchased call options exercised is added to the cost of the securities, indices, derivatives or foreign currency purchased. Premiums paid for the purchase of options which expire unexercised are treated as realised losses. Strike prices for Options on stock baskets are denominated in various foreign currencies based on the local currencies of the positions within the basket.

Swaptions

When a Portfolio writes a swaption, an amount equal to the premium received by the Portfolio is recorded as a liability and is subsequently adjusted to the current fair value of the swaption written. Premiums received from the written swaptions which expire unexercised are treated by the Portfolio on the expiration dates as realised gains. If a written call swaption is exercised, the premium is added to the proceeds from the sale of the underlying swap in determining the realised gain or loss. If a written put swaption is exercised, the premium reduces the cost basis of the swap purchased.

When a Portfolio purchases a swaption, an amount equal to the premium paid by the Portfolio is recorded as an asset and is subsequently adjusted to the current fair value of the swaption purchased. Premiums paid for the purchase of swaptions which expire unexercised are treated on the expiration date as realised losses. If a purchased payer swaption is exercised, the premium is subtracted from the proceeds of the underlying swap in determining whether the relevant Portfolio has realised a gain or a loss. If a purchased receiver swaption is exercised, the premium is added to the cost basis of the floating rate investment that has been swapped.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Repurchase and Reverse Repurchase Agreements

A Portfolio may enter into repurchase agreements under which it acquires a security from a counterparty who agrees, at the time of sale, to repurchase the security at a mutually agreed upon date and price, thereby determining the yield to the Portfolio during the term of the repurchase agreement. The resale price reflects the purchase price plus an agreed upon market rate of interest which is unrelated to the coupon rate or maturity of the purchased security. A Portfolio may also enter into reverse repurchase agreements under which it sells a security to a counterparty (for example, a bank or securities dealer) and agrees to repurchase the security at a mutually agreed upon date and price.

Contracts for Differences

Contracts for differences are valued based on the closing market price of the underlying security converted into the base currency of the contract for differences, less any financing charges attributable to each contract which are booked separately. The current market value is shown in the Balance Sheet. On entering a contract for differences, a Portfolio may be required to pledge an amount of cash and/or other assets to the broker which is equal to a certain percentage of the contract amount ('initial margin'). Subsequently, payments known as 'variation margins' are made or received by a Portfolio periodically, depending on the fluctuations in the value of the underlying security. During the period that the contract for differences is open, changes in the value of the contract are recognised as unrealised gains or losses and by marking to market at each valuation date in order to reflect the value of the underlying security. Realised gains or losses at the closure of the contract are equal to the difference between the value of the contract for differences at the time it was opened (including any financial charges) and the value at the time it was closed. Dividends (net of withholding taxes) attributable to open contracts for differences are deemed to be dividends receivable or payable at the end of the year.

Offsetting Financial Instruments

Financial assets and liabilities are offset and the net amount reported in the Balance Sheet when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the assets and settle the liability simultaneously.

Cash and Cash Equivalents

Cash comprises current deposits with banks. Cash equivalents are short-term highly liquid investments that are readily convertible to known amounts of cash, are subject to an insignificant risk of changes in value, and are held to meet short-term cash commitments rather than for investment or other purposes. Cash and cash equivalent assets are valued at their face value with interest accrued, where applicable, to the valuation point on the relevant dealing day, unless in the opinion of the Directors (in consultation with the Manager and the Administrator) an adjustment should be made to reflect the true value thereof.

Company cash accounts
A number of Company cash accounts are being operated by the Administrator, on behalf of the Company pursuant to the Central Bank of Ireland Guidance paper entitled Umbrella Funds – Cash Accounts Holding Subscription, Redemption and Dividend Monies. These cash accounts, held with Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary") for collection of unprocessed subscription monies received from investors, redemption monies payable to investors and/or other amounts due to investors for the Company are deemed assets of the Company. Any balances held on these cash accounts at the financial year end are reflected on the Aggregate Balance Sheets of the Company.

Due from/to brokers

Margin and collateral cash provided by the Portfolios to a counterparty in relation derivative financial instruments are recorded as Due from brokers in the Balance Sheet. Margin and collateral cash provided by the counterparty to a Portfolio in relation to derivative financial instruments are recorded as Due to brokers in the Balance Sheet. Margin cash is valued at fair value.

Foreign Currency Translation

Functional and Presentation Currency
The functional and presentation currency of the Corporate Hybrid Bond, the Euro Bond Absolute Return, the Euro Bond, the European High Yield Bond, the European Sustainable Equity, the Macro Opportunities FX and the Short Duration Euro Bond is EUR. The functional and presentation currency of the China A-Share Equity and the China Bond is CNY. The functional and presentation currency of the Japan Equity Engagement is JPY. The functional and presentation currency of all other Portfolios is US dollars. The base currency of the majority of net assets in the Company is US dollars and thus US dollars is deemed the most appropriate aggregate currency. For more details please refer to Note 15.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Foreign Currency Translation (continued)

Transactions and Balances
Assets and liabilities, denominated in currencies other than the functional currency of the Portfolio are translated into the functional currency at the rate of exchange prevailing at the Balance Sheet date. Transactions in currencies other than the functional currency of the Portfolio are translated into the functional currency at the rate of exchange prevailing at the dates of the transactions. Gains and losses on foreign exchange transactions are recognised in the Profit and Loss Account in determining the result for the year.

Proceeds from subscriptions and amounts paid for redemptions of Redeemable Participating Shares in currencies other than the functional currency are translated into the functional currency at the rates prevailing on the dates of the transactions. The Balance Sheet is translated using exchange rates at the year end and the Profit and Loss Account and the Statement of Changes in Net Assets are translated at an average rate over the year.

Income and Expense Recognition

Dividend income is recognised in the Profit and Loss Account on the date upon which the relevant security is listed as "ex-dividend" to the extent that information thereof is reasonably available to the Portfolio. Dividend and interest income is shown gross of any non-recoverable withholding taxes, which are disclosed separately in the Profit and Loss Account and net of any tax credits. Bank deposit interest is accounted for on a cash basis with other income being accounted for on an accrual basis.

Interest income is recognised in the Profit and Loss Account for all debt instruments classified as financial assets at fair value through profit or loss on an accrual basis.

Realised Gains and Losses on Investments

Realised gains and losses on disposals of financial assets at fair value through profit or loss are calculated on a first in first out basis. The associated foreign exchange movement between the date of purchase and the date of sale on the disposal of financial assets at fair value through profit or loss is included in net gain/(loss) on financial assets at fair value through profit or loss. Investment transactions are accounted for on trade date, the date at which the Portfolio commits to purchase or sell the asset.

Taxation

Under current law and practice, the Company qualifies as an investment undertaking as defined in Section 739B (1) of the Taxes Consolidation Act, 1997 as amended. On that basis, it is not therefore chargeable to Irish tax on its relevant income or relevant gains. However, Irish tax can arise on the happening of a chargeable event in the Company.

A chargeable event includes any distribution payments to shareholders or any encashment, redemption, or transfer of shares and the holding of shares at the end of each eight year period beginning with the acquisition of such shares. No Irish tax will arise on the Company in respect of chargeable events in respect of:

(i) a shareholder who is neither Irish resident nor ordinarily resident in Ireland for tax purposes, at the time of the chargeable event, provided appropriate valid declarations in accordance with the provisions of the Taxes Consolidation Act, 1997 as amended, are held by the Company, and

(ii) certain exempted Irish tax resident shareholders who have provided the Company with the necessary signed statutory declarations.

There were no chargeable events during the year under review.

Capital gains, dividends and interest received (if any, on investments made) by the Company may be subject to withholding taxes imposed by the country from which the investment income/gains are received and such taxes may not be recoverable by the Company or its shareholders.

The Finance Act, 2010 provides that the Revenue Commissioners may grant approval for investment funds marketed outside of Ireland to make payments to non-resident investors without deduction of Irish tax where no relevant declaration is in place, subject to meeting the "equivalent measures". A Company wishing to receive approval must apply in writing to the Revenue Commissioners confirming compliance with the relevant conditions. As at 31 December 2025 and 2024 the Company had not applied for approval from the Revenue Commissioners.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Taxation (continued)

The Company has reviewed the tax positions for the open tax years as of 31 December 2025 and 2024 and has determined that no provision for income tax and/or uncertain tax positions is required in the Company's financial statements.

Uncertainties exist with respect to the interpretation of complex tax regulations and changes in tax laws on foreign withholding tax. Given the wide range of international investments, differences arising between the actual investment income and assumptions made, or future changes to such assumptions, could necessitate future adjustments to tax expense already recorded.

The Company establishes provisions, based on reasonable estimates, for possible consequences of audits by the tax authorities of the respective countries in which it invests. The amounts of such provisions are based on various factors, such as experience of previous tax audits and differing interpretations of tax regulations by the taxable entity and the responsible tax authority. Such differences of interpretation may arise on a wide variety of issues depending on the conditions prevailing in the respective investment's domicile. As the Company assesses the probability for litigation and subsequent cash outflow with respect to taxes as remote, no contingent liability has been recognised for the years ended 31 December 2025 and 31 December 2024.

The Company is not subject to the Pillar II global minimum tax requirements, as the Portfolios meet the requirements to be classified as investment undertakings in accordance with the Irish Finance Bill 2024. On this basis there is no qualified domestic top-up tax accrued in the financial statements, given that the Portfolios meet the exemptions, notably being standalone regulated investment funds (as defined in the Taxes Consolidation Act (TCA) 1997).

Redeemable Participating Shares

Redeemable Participating Shares are redeemable at the shareholder's option and are classified as financial liabilities. Any distributions on these shares are recognised in the Profit and Loss Account as Finance Costs. The Redeemable Participating Shares can be put back to the Portfolio on any dealing day for cash equal to a proportionate share of the Portfolio's NAV. The Redeemable Participating Shares are carried at the redemption amount that is payable at the balance sheet date if the shareholder exercised the right to put the shares back to the Portfolio.

Distribution Policy

The Directors have determined to accumulate all net investment income and net realised capital gains attributable to the Accumulating Classes and therefore do not intend to declare dividends in respect of shares in such classes.

Source of Distributions
Pursuant to the Articles, the Directors may declare dividends, in respect of any shares out of net income (including dividend and interest income) and/or the excess of realised and unrealised capital gains over realised and unrealised losses in respect of investments of the Company (collectively "Net Income") and also out of capital. Dividends paid out of capital amount to a return or withdrawal of part of a shareholder's original investment or from any capital gains attributable to that original investment. Such dividends may result in an immediate decrease in the NAV of the relevant shares.

It is the current intention of the Directors, subject to any de minimis threshold, to declare and pay as a dividend at least 85% of the Net Income attributable to each of the Distributing Classes, other than (i) the (Weekly) Distributing Classes; (ii) the (Monthly) Distributing Classes); (iii) the (CG) Distributing Classes and (iv) such other Distributing Classes in a Portfolio which are specified in the relevant Supplement to pay dividends out of capital and Net Income. However, shareholders should note that the Directors may, in their discretion, decide not to make such declaration and payment in respect of a Distributing Class.

In respect of the (Weekly) Distributing Classes, the (Monthly) Distributing Classes and the (CG) Distributing Classes, the Directors intend to declare and pay a weekly, monthly or semi-annual dividend, respectively, attributable to the shares of each such class out of a combination of Net Income and capital, so that where Net Income during the relevant period is less than the amount declared, the balance will be paid of the capital represented by the relevant shares, which will enable the classes to distribute regular, set dividends. In the event that the Net Income attributable to the (Weekly) Distributing Classes, the (Monthly) Distributing Classes or the (CG) Distributing Classes exceeds the amount declared during the relevant period, the excess of Net Income over this amount will be retained in a distribution account in respect of the relevant shares and will form part of the dividend payable in respect of the succeeding distribution period. While the foregoing represents the Directors' current intention in respect of the declaration and payment of dividends in respect of the (Weekly) Distributing Classes, the (Monthly) Distributing Classes and the (CG) Distributing Classes, the Directors may in their discretion decide not to make such declaration and payment and there is no guarantee that any such dividends will be paid.

FOR THE YEAR ENDED 31 DECEMBER 2025

1. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Distribution Policy (continued)

Frequency of Distributions
Under normal circumstances, the Directors intend that dividends in respect of:

(a) each of the (Weekly) Distributing Classes in all Portfolios shall be declared and paid on or prior to the last business day of each week;

(b) each of the (Monthly) Distributing Classes in all Portfolios shall be declared on or prior to the last business day of each month and paid within three business days thereafter;

(c) each of the (CG) Distributing Classes in all Portfolios shall be declared on a semi-annual basis and paid within thirty business days;

(d) each of the other Distributing Classes of the Euro Bond, the Euro Bond Absolute Return, the Global Equity Megatrends and the Short Duration Euro Bond shall be declared on a quarterly basis and paid within thirty Business Days in relation to the Net Income of such Distributing Classes for the previous quarter;

(e) each of the other Distributing Classes of the Climate Innovation, the CLO Income, the Commodities, the Corporate Hybrid Bond, the Developed Market FMP – 2027, the EMD Corporate – Social and Environmental Transition, the Emerging Market Debt - Hard Currency, the Emerging Market Debt - Local Currency, the Emerging Market Debt Blend, the Emerging Market Debt Sustainable Investment Grade Blend, the European High Yield Bond, the Event Driven, the Global Bond, the Global Flexible Credit Income, the Global High Yield Engagement, the Global Investment Grade Credit, the Global Opportunistic Bond, the High Yield Bond, the Short Duration Emerging Market Debt, the Short Duration High Yield Engagement, the Strategic Income, the Sustainable Emerging Market Debt - Hard Currency, the Tactical Macro, the US Equity Premium and the US Real Estate Securities shall be declared on a quarterly basis and paid within thirty business days;

(f) each of the other Distributing Classes of the US Long Short Equity shall be declared on a semi-annual basis and paid within thirty business days;

(g) each of the other Distributing Classes of the Uncorrelated Strategies, the US Equity, the US Large Cap Value, the US Multi Cap Opportunities, the US Small Cap and the US Small Cap Intrinsic Value shall be declared on an annual basis and paid within thirty business days;

(h) each of the other Distributing Classes of all other Portfolios shall be declared on an annual basis and paid within thirty business days in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December;

(i) each of the (Monthly) Gross Income Distributing Classes in the Portfolios shall be declared on or prior to the last business day of each month and paid within three business days; and

(j) each of the other (Gross) Income Distributing Classes in the Portfolios shall be declared on a quarterly basis and paid within thirty business days.

Subject to income being available for distribution, the Directors may also decide to declare and pay interim dividends in relation to any of the Distributing Classes. All Shares in issue in a Distributing Class on any date on which the Directors determine to declare a dividend in respect of such Distributing Class will be eligible for such dividend.

The Directors reserve the right to change the dividend policy of any class of shares at their discretion on prior notice to shareholders of the relevant class. Any dividend unclaimed after a period of six years from the date of its declaration of such dividend shall be forfeited and shall revert to the relevant Portfolio.

In line with the Central Bank of Ireland (the "CBI") Guidance paper entitled Umbrella Funds – Cash Accounts Holding Subscription, Redemption and Dividend Monies published in March 2016, one or more Company cash accounts are being operated by the Administrator, on behalf of the Company, in accordance with the requirements of the CBI. Such Company cash accounts are designed to hold unprocessed subscription monies received from investors, redemption monies payable to investors and/or other amounts due to investors. As at 31 December 2025, the amount held in these cash accounts was US$ 21,143,835 (31 December 2024: US$ 12,185,928). Any balances held on these cash accounts at the financial year end are reflected on the Aggregate Balance Sheets of the Company.

FOR THE YEAR ENDED 31 DECEMBER 2025

4. BANK OVERDRAFT

As at 31 December 2025 and 31 December 2024, all bank overdraft balances as disclosed in the Balance Sheet are held with Brown Brothers Harriman & Co.

5. SHARE CAPITAL

The authorised share capital of the Company is 500,000,040,000 shares of no par value divided into 40,000 Subscriber Shares of no par value and 500,000,000,000 Participating Shares of no par value. The Directors are empowered to issue up to 500,000,000,000 shares of no par value in the Company on such terms as they think fit.

The Company is an investment company with variable capital due to its ability to issue and redeem Shares on demand. The share capital of the Company is divided into different series of Shares with each series of Shares representing a separate investment portfolio of assets. The Portfolios manage capital in accordance with the UCITS Regulations and the investment objectives and policies applicable to such Portfolio as specified in this Prospectus and the relevant Supplement. The Portfolios are not subject to externally imposed capital requirements. While the Portfolios invest in transferable securities and other liquid financial assets, the Manager also employs an appropriate liquidity risk oversight process, which takes into account efficient portfolio management transactions employed by the Portfolios, in order that each Portfolio is able to comply with its stated redemption terms and conditions.

In order to mitigate potential liquidity risks, the Manager tailors its controls to different investment strategies, liquidity terms and historic client behaviour. As part of its risk oversight, the Manager may employ various liquidity tests, the results of which may lead to a variety of possible solutions, including adjusting asset composition, drawing on applicable overdraft or credit facilities or taking other appropriate actions that would maintain an acceptable level of liquidity. Any Portfolio specific arrangements will be reviewed by the Manager's risk function, portfolio managers of the relevant Portfolio, Chief Investment Officer of the Manager as well as the board of directors of the Manager and the Directors. The Manager's risk team stress-tests each Portfolio on a regular basis in the context of portfolio composition and current/potential market conditions. Stress scenarios are run at different hypothetical redemption levels and the ability of the Portfolios to meet redemption requests in an orderly fashion at these levels are evaluated. Should analysis reveal that any of the Portfolios have low liquidity coverage ratios, conversation and steps are taken by the Manager's risk team and the portfolio team to evaluate these risks and the best way to mitigate them. In addition, daily liquidity buffer reports are monitored to gauge the liquidity risk of each Portfolio. Furthermore, market liquidity factors are monitored in order to capture potential anomalies in market liquidity.

There were 2 Subscriber Shares in issue at 31 December 2025 and 31 December 2024. The Subscriber Shares entitle the holders to attend and vote at general meetings of the Company but do not entitle the holders to participate in the profits or assets of the Company except for a return of capital on a winding-up. The Participating Shares entitle the holders to attend and vote at general meetings of the Company and to participate in the profits and assets of the Company.

The Subscriber shareholders are as follows:

Shareholder Name	Nominal Shareholding
MFD Secretaries Limited	1
Neuberger Berman Europe Limited	1

The minimum subscriptions and redemption limits in respect of each Portfolio are contained in the Company's Prospectus.

The capital of the Portfolios is represented by the net assets attributable to holders of redeemable participating shares. The amount of net assets attributable to holders of redeemable participating shares can change significantly on a daily or monthly basis, as the Portfolios are subject to daily or monthly subscriptions and redemptions at the discretion of shareholders.

The Portfolios' objectives for managing capital are:

- To invest the capital in investments meeting the investment objectives, investment policies, risk exposure and expected return indicated in its Prospectus;
- To achieve returns while safeguarding capital by using the investment strategies indicated in its Prospectus;
- To maintain sufficient liquidity to meet the expenses of the Portfolios, and to meet withdrawal requests as they arise; and
- To maintain sufficient size to make the operation of the Portfolios cost-efficient.

FOR THE YEAR ENDED 31 DECEMBER 2025
