6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES

In respect of each Class, the Manager shall be entitled to a fee in respect of the management services provided by it to each Portfolio (the "Management Fee"). The Manager is also entitled to a fee of 0.025% in respect of the administrative support services it provides to the Company.

The maximum annual fee which the Company will be charged in respect of a Portfolio is 2.5% of its NAV, however the current Management Fee payable in respect of each Portfolio shall be disclosed in the relevant Supplement. The current Management Fee rates for each class are set out below.

The Management Fee accrues daily and is payable monthly in arrears at the end of each calendar month. The Manager will pay any Sub-Investment Managers or investment advisers appointed in respect of a Portfolio out of its Management Fee, unless otherwise specified in the Supplement for the relevant Portfolio. The Manager is also entitled to recover from the Company all out-of-pocket expenses suffered or incurred by it (or its delegates) in the performance of its duties and shall pay any such expenses recovered to the appropriate service provider.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Details of management fee rate changes during the year ended 31 December 2025 are disclosed in note 21 of these Financial Statements.

Where applicable, a discount may be applied to the above fees.

The Manager may waive all or part of its fees in order to cap the Portfolios' Total Expense Ratios ("TERs"). These fee waivers are voluntary and may be discontinued by the Manager at any time without prior notice. Fees voluntarily waived are not subject to recovery by the Manager. A breakdown of the Portfolios' TERs is provided in Appendix II.

In respect of each Class of Uncorrelated Strategies, the Sub-Investment Manager will be entitled to receive a fee (the "Supplementary Adviser Fee") of up to 0.75% of the Net Asset Value of the Portfolio in respect of the services provided to the Portfolio by the Advisers. The Supplementary Adviser Fee shall accrue daily and be payable monthly in arrears within 30 Business Days of the end of the calendar month.

The Company will pay Administration Fees which shall not exceed 0.20% per annum of the NAV of the relevant Portfolio. The Administration Fee shall comprise of a fee payable to the Administrator in respect of the administration services which it provides for each Portfolio and a fee payable to the Manager in respect of the administrative support services which it provides for each Portfolio and will accrue monthly and be payable monthly in arrears.

The Company pays/paid administration fees to the Administrator based on the value of month-end net assets of Uncorrelated Strategies at the following rates:

Assets from US$ 0 - US$ 500 million	0.055%
Between US$ 500 - US$ 2,000 million	0.05%
Above US$ 2,000 million	0.04%

The Company pays administration fees to the Administrator based on the value of month-end net assets of each of the remaining Portfolios administered by the Administrator at the following rates:

Assets from US$ 0 - US$ 25,000 million	0.0055%
Above US$ 25,000 million	0.0025%

The above fees are subject to a minimum monthly fee of US$ 1,900 per Portfolio and inclusive of five share classes per Portfolio. Any Portfolio which has in excess of five share classes will be charged a monthly fee of US$ 100 per each additional share class.

In addition, the Administrator is entitled to a further fee in respect of transfer agency services provided to the Portfolios.

In respect of the B Shares, C Shares, E Shares, C1 Shares and C2 Shares in each Portfolio, the Manager and/or the relevant Distributor shall be entitled to a distribution fee at the annual rate of 1.00% of the NAV of the relevant Classes in respect of the distribution services provided to such Classes, which shall accrue daily and be payable monthly in arrears at the end of each calendar month. In respect of the M Shares in each Portfolio, the Manager and/or the relevant Distributor shall be entitled to a distribution fee at an annual rate expressed as a percentage of the NAV of the relevant Classes in respect of the distribution services provided to such Classes, which shall accrue daily and be payable monthly in arrears at the end of each calendar month.

The rate of such distribution fee varies between Portfolios and is disclosed in the Supplement for each Portfolio. In respect of all other Classes, the Manager may pay the Distributor a fee (which shall be at normal commercial rates), in respect of its distribution services, which shall also be payable out of the Management Fee.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Non-Affiliated Sub-Adviser fees

Fees payable to Non-Affiliated Sub-Advisers appointed by the Manager and/or the Sub-Investment Manager are not paid out of the assets of the Portfolios. Such fees paid to Green Court Capital Management Limited, if any, are paid by NBAMIL, and fees payable to sub-advisers engaged for Uncorrelated Strategies, if any, are paid by NBIA. Hence the aggregate non-affiliated sub-adviser fees paid directly from Portfolio assets for the year ended 31 December 2025 was US$ Nil (31 December 2024: US$ Nil).

Performance Fees

For the year ended 31 December 2025 a performance fee is being calculated on US Long Short Equity, Tactical Macro, Global High Yield Engagement and Event Driven.

Performance Fee paid to the Manager and a Sub-Investment Manager
The Manager and a Sub-Investment Manager may be entitled to receive a performance fee (the "Performance Fee") payable out of the Portfolio's assets in respect of each PF Class in the relevant Portfolio. The Depositary shall verify the calculation of the Performance Fee. The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any Class of Shares. Performance fees are payable on realised and unrealised capital gains taking into account realised and unrealised losses at the end of the Calculation Period defined below for each applicable Portfolio. Consequently, performance fees may be paid on unrealised gains which may subsequently never be realised.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level, they may be charged a Performance Fee even where the NAV of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of the Calculation Period.

If the Management Agreement or a Sub-Investment Manager is terminated before the end of a Calculation Period in any year the performance fee in respect of the then current Calculation Period will be calculated and paid as though the date of termination were the end of the relevant Calculation Period.

The performance fee will be accrued in the NAV on each Dealing Day and will normally be payable to the Manager or a Sub- Investment Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued performance fee in respect of those Shares will be payable to the Manager or a Sub-Investment Manager within 30 Business Days of the date of redemption. Crystallised performance fees shall remain in the relevant Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager or a Sub- Investment Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant Class.

The methodology used to calculate the Performance Fee for each applicable Portfolio is as follows:

US Long Short Equity

The Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio.

Definitions

Calculation Period	The Calculation Period shall normally run from 1 January to 31 December in each year except that: • in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December; • in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and • in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination. The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

US Long Short Equity (continued)

Definitions (continued)

Crystallisation	The point at which any Performance Fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.
High Water Mark	The greater of: (i) the initial offer price per Share; and (ii) the NAV per share at the end of any previous Calculation Period in respect of which a Performance Fee was paid.

Methodology

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in the event that the NAV per share at the end of the Calculation Period exceeds the High Water Mark for that particular PF Class.

The Performance Fee will be calculated on each Dealing Day and will be equal to 15% of the amount by which the percentage growth in the NAV per share over the Calculation Period exceeds that of the High Water Mark. The Performance Fee will be accrued on each Dealing Day and will form part of the NAV per share for each PF Class where applicable. Any Performance Fee accrual on a Dealing Day will be superseded by any accrual made on the following Dealing Day up to the last Dealing Day of the Calculation Period.

In all cases the NAV per share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

No Performance Fee will be paid until the NAV per share exceeds the High Water Mark and such fee is only payable on the outperformance of the NAV per share over the Hurdle Rate as described above.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level, they may be charged a Performance Fee even where the NAV of their shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of the Calculation Period.

The Performance Fee will be accrued in the NAV on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued performance fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depositary shall verify the calculation of the Performance Fee.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

For the year ended 31 December 2025, the Manager earned a performance fee of US$ 361,405 (31 December 2024: US$ 381,344).

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

Global High Yield Engagement

The Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio.

Definitions

Benchmark	ICE BofA Global High Yield Constrained Index in relevant class currency (as detailed below)
Calculation Period	The Calculation Period shall normally run from 1 January to 31 December in each year except that: • in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December; • in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and • in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination. The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.
Crystallisation	The point at which any performance fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or converts all or part of its Shareholding.
Outperformance	The excess performance of the NAV per share over the performance of the Benchmark during the Calculation Period.

Methodology

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in respect of any Outperformance, i.e. the excess performance of the NAV per share over the performance of the Benchmark applicable to that particular PF Class during the Calculation Period. The Percentage Fee will be calculated on each Dealing Day and will be equal to 20% of the Outperformance applicable to that particular PF Class over the same period.

In all cases the NAV per share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

In the event that the performance of a PF Class over a Calculation Period is less than that of the Benchmark, no Performance Fee shall be payable in respect of that PF Class until such cumulative underperformance relative to its Benchmark has been recovered.

In the event that the PF Class has achieved Outperformance over a Calculation Period, a Performance Fee shall be payable in respect of that PF Class. Upon payment the Benchmark will be reset, this process ensures the NAV per share and the Benchmark start from the same place at the start of the calculation period. Accordingly for the next Calculation Period the commencing Benchmark value will equal the NAV in respect of the PF Class on which the Performance Fee was paid i.e. if the NAV were to equal 110 the commencing Benchmark Value would also equal 110.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

Global High Yield Engagement (continued)

Benchmark Indices

Classes	Index	Code
USD PF Classes	ICE BofA Global High Yield Constrained Index	HW0C select currency USD
EUR Hedged PF Classes	ICE BofA Global High Yield Constrained Index – EUR Hedged	HW0C select currency EUR
GBP Hedged PF Classes	ICE BofA Global High Yield Constrained Index – GBP Hedged	HW0C select currency GBP

Shareholders should note that, as the Performance Fee is payable on the outperformance over the Benchmark, they may be charged a Performance Fee where the NAV of their shares has declined but to a lesser extent than the Benchmark.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level, they may be charged a Performance Fee even where the NAV of their shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be accrued in the NAV on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued Performance Fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depositary shall verify the calculation of the Performance Fee.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

There was no performance fees paid to the Manager by the Portfolio for the year ended 31 December 2025 and 31 December 2024.

Event Driven

The Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio. All Classes in the Portfolio are PF Classes.

Definitions

Calculation Period	The Calculation Period shall normally run from 1 January to 31 December in each year except that: • in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December; • in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and • in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination. The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

Event Driven (continued)

Definitions (continued)

Crystallisation	The point at which any Performance Fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.
High Water Mark	The greater of: (i) the initial offer price per Share; and (ii) the NAV per share at the end of any previous Calculation Period in respect of which a Performance Fee was paid.

Methodology

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in the event that the Net Asset Value per Share at the end of the Calculation Period exceeds the High Water Mark (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) for that particular PF Class.

The Performance Fee will be calculated on each Dealing Day and will be equal to 20% of the amount by which the percentage growth in the Net Asset Value per Share over the Calculation Period exceeds that of the High Water Mark, with the exception of the I5 Classes, in respect of which the Performance Fee will be equal to 15% of the amount by which the percentage growth in the Net Asset Value per Share over the Calculation Period exceeds that of the High Water Mark.

The Performance Fee will be accrued on each Dealing Day and will form part of the Net Asset Value per Share for each PF Class where applicable. Any Performance Fee accrual on a Dealing Day will be superseded by any accrual made on the following Dealing Day up to the last Dealing Day of the Calculation Period.

In all cases the Net Asset Value per Share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

No Performance Fee will be paid until the Net Asset Value per Share exceeds the High Water Mark and such fee is only payable on the outperformance of the Net Asset Value per Share over the High Water Mark as described above.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of the Calculation Period.

The Performance Fee will be accrued in the Net Asset Value on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued performance fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depositary shall verify the calculation of the Performance Fee and ensure that it is not open to the possibility of manipulation.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

For the year ended 31 December 2025, the Manager earned a performance fee of US$ 12,357,981 (31 December 2024: US$ 3,671,667).

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

Tactical Macro

The Sub-Investment Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio. All Classes in the Portfolio are PF Classes.

Definitions

Calculation Period	The Calculation Period shall normally run from 1 January to 31 December in each year except that: • in the case of the initial issue of Shares in each Class, the first Calculation Period will run from the date of issue to 31 December of the following year; • in the case of the termination of a Class, the Calculation Period will terminate on the date of the termination; and • in the case of the termination of the Sub-Investment Manager, the Calculation Period will terminate on the date of the termination.
Crystallisation	The point at which any Performance Fee becomes payable to the Sub-Investment Manager. Crystallisation will occur (i) at the end of the Calculation Period; (ii) at the termination of the appointment of the Sub-Investment Manager; or (iii) on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.
Outperformance	The excess performance of the Net Asset Value per Share over the performance of the Benchmark during the Calculation Period.

Benchmark Indices

Classes	Index
USD Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD)
EUR Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - EUR Hedged)
GBP Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - GBP Hedged)
CHF Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - CHF Hedged)
JPY Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - JPY Hedged)

The Benchmark is a widely used benchmark for short-term interest rates, providing an indication of the average rates at which banks could obtain wholesale, unsecured funding for set periods in particular currencies.

For Classes denominated in currencies other than those provided for above, the Benchmark will be the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) hedged to the relevant class currency, as this better reflects an appropriate comparator for investors in those Classes.

FOR THE YEAR ENDED 31 DECEMBER 2025

6. MANAGEMENT, ADMINISTRATION, DISTRIBUTION AND DEPOSITARY FEES (CONTINUED)

Performance Fees (continued)

Performance Fee paid to the Manager and a Sub-Investment Manager (continued)

Tactical Macro (continued)

Methodology

For each Calculation Period, a Performance Fee in respect of each Class in issue becomes due in respect of any Outperformance, i.e. the excess performance of the Net Asset Value per Share (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) over the performance of the Benchmark applicable to that particular Class during the Calculation Period. The Performance Fee will be calculated on each Dealing Day and will be up to 20% of the Outperformance applicable to that particular Class over the same period.

In the event that the performance of a Class over a Calculation Period is less than that of the Benchmark, no Performance Fee shall be payable in respect of that Class until such cumulative underperformance relative to its Benchmark has been recovered.

In the event that the Class has achieved Outperformance over a Calculation Period, a Performance Fee shall be payable in respect of that Class. Upon payment the Benchmark will be reset, this process ensures the Net Asset Value per Share and the Benchmark start from the same place at the start of the calculation period. Accordingly for the next Calculation Period, the commencing Benchmark value will equal the Net Asset Value in respect of the Class on which the performance fee was paid i.e. if the Net Asset Value were to equal 110 at the end of a Calculation Period in which a Performance Fee was paid, the Benchmark value at the start of the following Calculation Period would also equal 110.

Shareholders should note that, as the Performance Fee is payable on the outperformance over the Benchmark, they may be charged a Performance Fee where the Net Asset Value of their Shares has declined but to a lesser extent than the Benchmark.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be calculated and accrued daily as at each Valuation Point. The Performance Fee is calculated on the unswung Net Asset Value per Share, i.e. before any adjustment for swing pricing (for more information on "swing pricing" please see the "Determination of Net Asset Value – Adjustments of Valuations and Swing Pricing" section of the Prospectus).

The Performance Fee will normally be payable to the Sub-Investment Manager in arrears within 30 Business Days of 31 December each year. However, in the event of the Crystallisation of the Performance Fee during a Calculation Period, the accrued Performance Fee in respect of such amounts will be payable within 30 Business Days of the end of the calendar quarter during which the Crystallisation occurred.

Crystallised Performance Fees shall remain in the Portfolio until paid to the Sub-Investment Manager and shall not participate in subsequent gains and losses of the Portfolio. Crystallised Performance Fees shall not be used or made available to satisfy redemptions or pay any fees and expenses of the Portfolio or the Company (other than Performance Fees payable to the Sub-Investment Manager).

The Depositary shall verify the calculation of any Performance Fee and ensure that it is not open to the possibility of manipulation.

Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

For the year ended 31 December 2025, the Manager earned a performance fee of US$ 422,227 (31 December 2024: US$ Nil).

Depositary Fee

The Company pays the Depositary a fee in respect of trustee services for each Portfolio which shall not exceed 0.02% per annum of the NAV of the relevant Portfolio and which accrues monthly and is payable monthly in arrears. The Depositary is also entitled to reimbursement by the Company out of the assets of the Portfolio for safekeeping fees, transaction charges and reasonable out-of pocket expenses ("Custody fees") incurred for the benefit of the Portfolio including the fees (which will not exceed normal commercial rates) and reasonable out-of-pocket expenses of any sub-custodian appointed by the Depositary.

FOR THE YEAR ENDED 31 DECEMBER 2025

7. DIRECTORS' FEES AND EXPENSES

The Directors are entitled to a fee as remuneration for their services at a rate to be determined from time to time by the Directors provided that the amount of remuneration payable to any Director in any one year in respect of the Company shall not exceed €75,000 (or €85,000, in the case of the chairperson of the Company) or such other amount as the Directors may from time to time determine. The Directors, and any alternate Directors, are also entitled to be paid all travelling, hotel and other expenses properly incurred by them in attending Directors or Shareholders meetings or any other meetings in connection with the business of the Company. All Pay As You Earn ("PAYE") paid on Directors Fees is included within total expenses. None of the Directors entered into a service contract with the Company nor is any such contract proposed and none of the Directors is an executive of the Company. The Directors who are also employees of Neuberger Berman Europe Limited will receive a nil fee for their services as directors of the Company.

The aggregate emoluments of the Directors (including expenses) for the year ended 31 December 2025 were US$ 180,550 in total (31 December 2024: US$ 155,612) of which US$ Nil was outstanding at the year end (31 December 2024: US$ 43,578).

As at 31 December 2025, Ms. Michelle Green is a Director and employee of Neuberger Berman Europe Limited ("NBEL"), a Sub-Investment Manager and a Distributor of the Company. Ms. Mary Brady is a Director and employee of Neuberger Berman Asset Management Ireland Limited ("NBAMIL"), the Manager of the Company. Ms. Gráinne Alexander is a Director of NBAMIL. Ms. Michelle Green and Ms. Mary Brady voluntarily agreed to waive their entitlement to a fee in relation to their duties as Directors for the year ended 31 December 2025 (31 December 2024: same).

Directors' Fees are reported gross of Income Tax and no Benefit in Kind was earned by the Directors.

8. AUDITORS' REMUNERATION

Ernst & Young, Chartered Accountants remuneration (inclusive of expenses and value added tax ("VAT")) for work carried out for the Company in respect of the financial year is as follows:

		31 December 2025 US$	31 December 2024 US$
Statutory audit fee:	- Ernst & Young (Ireland):	623,321	505,121
Other non-audit fees:	- Ernst & Young (Austria):	166,751	134,074
	- Ernst & Young (Switzerland):	156,436	140,000

9. OTHER FEES AND EXPENSES

Transaction costs are the costs incurred in the acquisition, issue or disposal of financial assets and liabilities. Transaction costs include fees and commissions paid to brokers and dealers, levies by regulatory agencies and securities exchanges, and transfer taxes and duties. Transaction costs do not include debt premiums or discounts, financing costs or internal administrative or holding costs. These costs are accounted for as they are incurred and are recognised as an expense for financial reporting purposes in the Profit and Loss Account.

The Company and the Portfolios also pay certain other costs, charges, fees and expenses incurred in its operation. These may include without limitation; fees and expenses incurred in relation to banking and brokerage in respect of the purchase and sale of Portfolio securities, taxes, insurance, the costs and expenses of maintaining its books of account and of preparing, printing, publishing and distributing (in such languages as may be necessary) prospectuses, supplements, annual and semi-annual reports and other documents or information to current and prospective shareholders (including the costs of electronic transmission techniques to distribute such documents or information), the expense of publishing price and yield information, in relevant media, the costs and expenses of obtaining authorisations or registrations of the Company or of any shares with the regulatory authorities in various jurisdictions, including any levy applied by the Central Bank of Ireland, the cost of listing and maintaining a listing of shares on any stock exchange, marketing and promotional expenses, the cost of convening and holding Directors and Shareholders meetings, the costs of exercising voting rights attached to the Company's investment in the best interest of the Shareholders, professional fees and expenses for legal, auditing and other consulting services, any and all expenses arising in respect of the termination or liquidation of the Company and such other costs and expenses (including non-recurring and extraordinary costs and expenses) as may arise from time to time and which have been approved by the Directors as necessary or appropriate for the continued operation of the Company or of any Portfolio. In connection with the registration of the Company or the shares for sale in certain jurisdictions, the Company pays the fees and expenses of paying agents, information agents and/or correspondent banks, such payments being made at normal commercial rates.

The Manager will directly pay for all research which it consumes, regardless of where the research originates. Sub-Investment Managers that are located outside the EU, which do not send any research that they receive into the EU, may charge research expenses to the relevant Portfolio through the provision of an annual research budget for each Portfolio. Research budget accruals for Uncorrelated Strategies for the year ended 31 December 2025 were US$ 839,309 (31 December 2024: US$ 1,808,526).

FOR THE YEAR ENDED 31 DECEMBER 2025

10. RELATED PARTY TRANSACTIONS

Under FRS 102 "Related Party Transactions", parties are related if any one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions.

Ms. Michelle Green is a Director of the Company and also a Director and employee of NBEL, a Sub-Investment Manager and a Distributor of the Company. Ms. Mary Brady is a Director and employee of NBAMIL, the Manager of the Company. Ms. Gráinne Alexander is a Director of NBAMIL, the Manager of the Company.

During the year ended 31 December 2024 Mr. Alex Duncan was a Director of the Company and also a Director and employee of NBEL. Effective 26 November 2024 Mr. Alex Duncan resigned as a Director of the Company. Fees earned by NBEL and NBAMIL during the years ended 31 December 2025 and 31 December 2024 are shown in the table below. Please refer to Note 7 for details of Directors' Fees paid during the years ended 31 December 2025 and 31 December 2024.

Management, Administration and Performance Fees*	31 December 2025 US$	31 December 2024 US$
Management and Administration Fees Received by NBAMIL, net of waivers	252,270,641	207,800,481

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES

In pursuing its investment objectives the Company invests in transferable securities with the aim of spreading risk. Investments in equities and fixed income securities expose the Company to varying risks including market, liquidity and credit/counterparty risks. A description of the specific risks and the policies for managing these risks are included below. In addition, consequences of political, social, economic, diplomatic changes, or public health condition may have disruptive effects on market prices or fair valuations of foreign investments. Fair value is determined in accordance with the methodology outlined in the Statement of Significant Accounting Policies. The Schedules of Investments of the Portfolios at the year-end are representative of the type of investments held during the year.

Market Risk

Market risk embodies the potential for both losses and gains and includes price risk, interest rate risk and foreign currency risk.

All security investments present a risk of loss of capital. The Manager and Sub-Investment Managers moderate this risk through a careful selection of securities and other financial instruments within specified limits. The Company's overall market positions are monitored on a daily basis by the Portfolio's Manager and are reviewed on a quarterly basis by the Board of Directors. The Company's equity and debt securities and trading derivative financial instruments are susceptible to market price risk arising from uncertainties about future prices of the instruments.

(a) Price Risk

Price risk is the risk that the fair values of securities decrease as a result of changes in the levels of the indices and the values of individual securities. The trading price risk exposure arises from the Company's investment portfolios.

The majority of the Company's investments are listed on recognised exchanges or traded on regulated markets as per the Prospectus. As at 31 December 2025 and 31 December 2024, a 10% increase in security prices would have increased the Net Assets and the Changes in Net Assets of each Portfolio as outlined in the table below. An equal change in the opposite direction would have decreased the Net Assets by an equal but opposite amount.

**** Portfolio liquidated on 30 September 2025.
***** Portfolio liquidated on 1 December 2025.

Other price risk is the risk that the value of the instruments will fluctuate as a result of changes in market prices (other than those arising from interest rate risk or currency risk), whether caused by factors specific to an individual instrument, its issuer or all factors affecting all instruments traded in the market. As the majority of the Company's financial instruments are carried at fair value with fair value changes recognised in the Profit and Loss Account changes in market conditions will directly affect Net Gain/(Loss) on Financial Assets and Liabilities at Fair Value through Profit or Loss.

Price risk is managed by the Manager by investing in a diversified range of securities in different markets.

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(b) Foreign Currency Risk

The Net Asset Value per share of a Portfolio will be computed in the base currency of the relevant Portfolio, whereas the investments held for the account of that Portfolio may be acquired in other currencies. The base currency value of the investments of a Portfolio designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. Positions are monitored on a daily basis and hedging strategies are used to ensure positions are maintained within established limits.

At 31 December 2025 and 31 December 2024, had the base currency of the relevant Portfolio strengthened by 5% in relation to all currencies, with all other variables held constant, Net Assets and the Change in Net Assets per the Profit and Loss Account would have (decreased) increased as outlined in the table below.

Portfolio	Currency	31 December 2025	% of Net Assets	31 December 2024	% of Net Assets

* Portfolio liquidated during the current or prior reporting year.

A 5% weakening of the base currency of the relevant Portfolio against the above currencies would have resulted in an equal but opposite effect on the above financial statement amounts to the amounts shown above, on the basis that all other variables remain constant. The foreign currency risk exposure has been calculated on the Net Assets of the Portfolio that are denominated in a currency which is not the base currency of the relevant Portfolio. The Manager deems 5% to be a reasonable rate for foreign currency shift.

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(c) Interest Rate Risk

The Portfolios may hold investments in fixed interest bearing securities. Any change to the interest rate for particular securities may result in income either increasing or decreasing. Prices of securities held will be impacted by domestic rates of interest. The Portfolio's performance therefore will depend in part on its ability to anticipate and respond to such fluctuations in market interest rates. The Managers and Sub-Investment Managers manage this risk by way of duration and yield curve analysis to establish and monitor duration positioning and yield curve structure.

The Company has forty-five Portfolios as at the year ended 31 December 2025. Of the Portfolios, seventeen are Portfolios where the majority of the assets and liabilities of the Portfolio is invested in equity securities and are non-interest bearing. As a result, these Portfolios are not subject to significant amounts of risk due to fluctuations in the prevailing level of market interest rates.

At year end, the Portfolios set out in the table below invested primarily in fixed income and floating rate instruments and are therefore exposed to the effects of fluctuations in the prevailing level of market interest rates on their respective financial position and cash flows.

Based on the Portfolios' compositions as at 31 December 2025 and 31 December 2024, had interest rates fallen by 0.50% with all other variables held constant, it is estimated that Net Assets and the Change in Net Assets per the Profit and Loss Account would have increased by approximately the values outlined in the table below. A 0.50% rise in rates would have resulted in an equal but opposite effect.

Portfolio	Currency	31 December 2025	% of Net Assets	31 December 2024	% of Net Assets

(d) Credit/Counterparty Risk

Credit risk is the risk that an issuer or counterparty will be unable to meet a commitment that it has entered into with the Company. It is the Company's policy to enter into financial instruments with a diversity of creditworthy counterparties. Therefore, the Company does not expect to incur material credit losses on its financial instruments. The Manager performs assessments of the credit quality of trading counterparties used by the Company. This assessment includes, at minimum, an initial and annual credit review based on financial and/or third-party ratings data. Counterparties used for forwards and other OTC derivatives are subject to heightened monitoring, which includes in-depth credit reviews considering third-party ratings and/or factors such as capital adequacy, asset quality, management quality, earnings, and liquidity. The Manager also follows news regarding the financial sector to monitor industry trends as well as events that may directly impact specific counterparties.

The Company's maximum exposure to credit risk (not taking into account the value of any collateral or other security held) in the event that counterparties fail to perform their obligations as at 31 December 2025 and 31 December 2024 in relation to each class of recognised financial assets, other than derivatives, is the carrying amount of those assets as indicated in the Balance Sheet.

Transactions involving derivative financial instruments are usually with counterparties with whom the Portfolio has signed master netting agreements. Master netting agreements provide for the net settlement of contracts with the same counterparty in the event of default. The credit risk associated with derivative financial assets subject to a master netting arrangement is eliminated only to the extent that financial liabilities due to the same counterparty will be settled after the assets are realised. Risk is also managed by collateral being immediately available to the Company without recourse to counterparty in the event of default of counterparty.

Cash held via accounts opened on the books of Brown Brothers Harriman & Co. ("BBH") are obligations of BBH while cash held in accounts opened directly on the books of a third party cash correspondent bank, sub-custodian or a broker (collectively, "agency accounts") are obligations of the agent. Cash held via agency cash accounts are liabilities of the agent, creating a debtor/creditor relationship directly between the agent and the Company. Accordingly, while BBH is responsible for exercising reasonable care in the administration of such agency cash accounts where it has appointed the agent (i.e., in the case of cash correspondent banks and sub-custodians), it is not liable for their repayment in the event the agent, by reason of its bankruptcy, insolvency or otherwise, fails to make repayment. As at 31 December 2025, all cash and bank balances held on overnight deposit were with third party institutions, as outlined in Note 3. Cash and Cash Equivalents, that have a long term credit rating which is investment grade as issued by Standard & Poor's (31 December 2024: same). BBH has a long term credit rating of A+ (31 December 2024: A+) as issued by Fitch.

The Depositary must ensure that there is legal separation of non-cash assets held in custody, that such assets are held on a fiduciary basis, and that appropriate internal control systems are maintained such that records clearly identify the nature and amount of all assets under custody. As Depositary, Brown Brothers Harriman Trustee Services (Ireland) Limited ("BBHTS") must ensure the ownership of each asset and the location of documents of title for each asset.

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(d) Credit/Counterparty Risk (continued)

The key risk for the Company remains Credit Risk i.e. that the Manager buys a loan or bond of a particular issuer and it does not perform as expected and either defaults on a payment or experiences a significant drop in the secondary market value.

To mitigate this risk, the Manager carries out independent due diligence on each borrower, and has a focus on stable, performing credits that evidence strong track records through previous economic cycles. Additionally, the size of an issuer is also considered and the Manager continues to favour the larger issuers in the market, defined by having debt issuance greater than $500m. These issuers tend to have broader syndicates, which can aid liquidity in the secondary market. As well as screening out the smaller issuers the Manager also excludes highly cyclical industries and companies with limited earning visibility from its Investment Process.

Once a particular investment has been made, the Manager monitors it. A range of relevant data is reviewed on an ongoing basis for each investment, including, but not limited to, key financial drivers, commodity prices, stock prices, regulatory developments, financial results, press releases and management commentary to identify any indicators of credit deterioration.

To manage this risk further, the Board ensures that the Manager operates in accordance with the investment limits and restrictions policy determined by the Board. The Directors monitor the implementation and results of the investment process with the Manager at each Board meeting and monitor risk factors in respect of each Portfolio.

The securities that BBH holds in custody include equities, fixed income securities, participatory notes, asset backed securities and REITS. All securities that BBH holds in custody (as global sub-custodian for and on behalf of BBHTS for further benefit of its underlying clients) are segregated from BBH's own assets, whether they are held in BBH's vault, in segregated accounts on the books of their sub-custodians, or in an account maintained at a central securities depository. BBH maintains segregated accounts per client on its own books as well as on the books of the sub-custodian in the local market, where this is possible. As Depositary, BBHTS must also ensure non-cash assets are held on a fiduciary basis through BBH's network of global sub-custodians.

BBH's sub-custodians are required by contract with BBH and generally by operation of law to segregate the securities of custody clients from the general banking assets of the sub-custodian.

BBH performs both initial and ongoing due diligence reviews on the sub-custodians within its global custody network through its Network Management Group. Such reviews include an assessment of service level standards, management expertise, market information, custody operations, reporting and technology capabilities at the sub-custodian, as well as reviews in relation to their reputation and standing in the market and their ongoing commitment to providing custody services.

Service level agreements are put in place with each sub-custodian, as well as the usual contractual arrangements, and these are reviewed on a regular basis through service review meetings, including on-site due diligence meetings.

Regular financial analysis of all sub-custodians is carried out by BBH's Risk and Credit Group and is focused on the sub-custodian bank's capital adequacy, asset quality, earnings, liquidity and credit ratings as key indicators, amongst others. These reviews form part of BBH's routine assessment of a sub-custodian's financial strength and standing.

The Manager monitors the Company's risk in accordance with UCITS guidelines and reports to the Board of Directors on a periodic basis.

The Company invests in debt instruments that may receive a credit rating from a well-known rating agency. The credit ratings in the tables below are calculated as a percentage of fixed income securities, where there is a significant proportion of that Portfolio held as fixed income. A debt instrument is considered Investment Grade by Standard & Poor's and Fitch if its credit rating is BBB- or higher and by Moody's if its credit rating is Baa3 or higher. As at 31 December 2025 and 31 December 2024 the exposures by credit rating for each applicable Portfolio were as follows:

(e) Liquidity Risk

The main liquidity risks of the Company are associated with the need to satisfy Shareholders' requests for redemptions. The Company is exposed to daily cash redemptions of Redeemable Participating Shares. Redeemable Participating Shares are redeemed on demand at the holder's option based on the relevant Portfolio's Net Asset Value per Share at the time of redemption. This risk is mitigated by the Company primarily investing in securities listed or traded on the recognised markets in OECD member states and other countries thus assets comprise principally of realisable securities, which can be readily sold, except investments categorised as Level 3 of the fair value hierarchy as disclosed in Note 12 (f). Additionally, if there are any collateral arrangements in place with a counterparty, this will limit the extent to which liabilities may be extended to the Company. Moreover, as outlined in Note 19, a committed liquidity facility is available to the Company.

Financial Liabilities

The maturity grouping is based on the remaining period from the end of the reporting period to the contractual maturity date. When the counterparty has a choice of when the amount is paid, the liability is allocated to the earliest on which the Company can be required to pay.

As at 31 December 2025 and 31 December 2024, all payables were due within one month. Please refer to Schedules for Investments for details of maturity dates of derivative financial liabilities. Liabilities other than derivative financial liabilities are due within one month.

(f) Fair Value of Investments

FRS 102 Section 11.27 on "Fair Value: Disclosure" requires disclosure relating to the fair value hierarchy in which fair value measurements are categorised for assets and liabilities. The disclosures are based on a three-level fair value hierarchy for the inputs used in valuation techniques to measure fair value.

The Company has classified fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The three levels of the fair value hierarchy under FRS 102 are described below:

Level 1 – Unadjusted quoted prices in active markets that are accessible at the measurement date for identical unrestricted assets or liabilities;

Level 2 – Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices);

Level 3 – Inputs for the asset or liability that are not based on observable market data (unobservable inputs). Pricing inputs are unobservable for the investment and include situations where there is little, if any market activity for the instrument. The inputs into the determination of fair value require significant management, judgement or estimation. As observable prices are not available for these securities, the Portfolios would have used valuation techniques to derive the fair value if applicable.

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(f) Fair Value of Investments (continued)

The level in the fair value hierarchy within which the fair value measurement is categorised in its entirety is determined on the basis of the lowest level input that is significant to the fair value measurement in its entirety. For this purpose, the significance of an input is assessed against the fair value measurement in its entirety. For example, if a fair value measurement uses observable inputs that require significant adjustment based on unobservable inputs, that measure is a Level 3 measurement.

Assessing the significance of a particular input to the fair value measurement in its entirety requires judgement in considering the factors specific to the asset or liability.

Determining what constitutes observable inputs requires significant judgment by the Manager. The Manager considers observable inputs to be market data that is readily available, supported by market transactions, not proprietary, regularly distributed, transparent, verifiable, reliable, based on consensus, and provided by independent sources actively involved in the relevant market.

The value of the Portfolios' investments in equity securities, exchange-traded funds, warrants, exchange-traded options purchased and written, for which market quotations are available, is generally determined by obtaining valuations from independent pricing services based on the latest sale price quoted on a principal exchange or market for that security (Level 1 inputs). Securities traded primarily on the NASDAQ Stock Market are normally valued at the NASDAQ Official Closing Price ("NOCP") provided by NASDAQ each business day. The NOCP is the most recently reported price as of 4:00:02 p.m., Eastern Time, unless that price is outside the range of the "inside" bid and asked prices (i.e., the bid and asked prices that dealers quote to each other when trading for their own accounts); in that case, NASDAQ will adjust the price to equal the inside bid or asked price, whichever is closer. Because of delays in reporting trades, the NOCP may not be based on the price of the last trade to occur before the market closes. If there is no sale of a security on a particular day, the independent pricing services may value the security based on market quotations.

The value of participatory notes is determined by obtaining valuations from independent pricing services based on the underlying equity security and applicable exchange rate (Level 1 inputs).

The value of the Portfolios' investments in debt securities is determined primarily by obtaining valuations from independent pricing services based on available mid quotations, or if quotations are not available, by methods which include various considerations based on security type (generally Level 2 inputs). If there is more than one quote security available, security is classified as Level 2. In addition to the consideration of yields or prices of securities of comparable quality, coupon, maturity and type, indications as to values from dealers, and general market conditions, the following is a description of other Level 2 inputs and related valuation techniques used by independent pricing services to value certain types of debt securities held by the Portfolios:

Corporate Bonds. Inputs used to value corporate debt securities generally include relevant credit information, observed market movements, sector news, US Treasury yield curve or relevant benchmark curve, and other market information, which may include benchmark yield curves, reported trades, broker-dealer quotes, issuer spreads, comparable securities, and reference data, such a market research publications, when available ("Other Market Information").

Convertible Bonds. Inputs used to value convertible bonds (including CoCos) generally include underlying stock data, conversion premiums, listed bond and preferred stock prices and Other Market Information, which may include benchmark curves, trade execution data, and sensitivity analysis, when available.

U.S. Treasury Obligations. Inputs used to value U.S. Treasury securities generally include quotes from several inter-dealer brokers and Other Market Information.

U.S. Government Agency Securities. Inputs used to value U.S. Government Agency securities generally include obtaining benchmark quotes and Other Market Information.

Asset-Backed Securities and Mortgage-Backed Securities. Inputs used to value asset-backed securities and mortgage-backed securities generally include models that consider a number of factors, which may include the following: prepayment speeds, cash flows, spread adjustments and Other Market Information.

High Yield Securities. Inputs used to value high yield securities generally include a number of observations of equity and credit default swap curves related to the issuer and Other Market Information.

Emerging Markets Debt and Foreign Government Securities. Inputs used to value emerging markets debt and foreign government securities generally include dealer quotes, bond market activity, discounted cash flow models, and other relevant information such as credit spreads, benchmark curves and Other Market Information.

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(f) Fair Value of Investments (continued)

Collateralised Loan Obligations (CLOs). The value of collateralised loan obligations is primarily determined by cash flow data, relevant loan pricing data and market conditions, and research from market participants and trading desks (Level 2 or 3 inputs).

The value of term loans is determined primarily by obtaining valuations from independent pricing services based on broker quotes (generally Level 2 or Level 3 inputs depending on the number of quotes available).

The value of insurance linked securities is determined by the Manager primarily by obtaining valuations from independent third-party pricing services based on mid quotations (Level 2 or 3 inputs).

The value of futures contracts is determined by obtaining valuations from independent pricing services at the settlement price at the market close (Level 1 inputs).

The value of forward foreign currency contracts is determined by obtaining valuations from independent pricing services based on actual traded currency rates on independent pricing services' networks, along with other traded and quoted currency rates provided to the pricing services by leading market participants (Level 2 inputs).

The value of credit default swaps is determined by obtaining valuations from independent pricing services using a model that considers a number of factors, which may include default probabilities, credit curves, recovery rates and cash flows (Level 2 or 3 inputs).

The value of inflation swaps is determined primarily by obtaining valuations from independent pricing services based on references to the underlying inflation rates including forward inflation expectation rate and the respective interbank offered forward rate to produce the daily price. The present value is calculated based off of expected cash flows based on swap parameters along with reference to the underlying forward inflation curve and reference rate (Level 2 inputs).

The value of interest rate swaps is determined primarily by obtaining valuations from independent pricing services based on references to the underlying rates including the local overnight index swap rate and the respective interbank offered forward rate to produce the daily price. The present value is calculated based off of expected cash flows based on swap parameters along with reference to the underlying yield curve and reference rate (Level 2 inputs).

The value of total return swaps is determined by obtaining valuations from independent pricing services using the underlying asset and stated benchmark interest rate (Level 2 inputs).

The value of cross currency swaps is determined by obtaining valuations from independent pricing services based on present value of expected cash flows based on swap parameters along with reference to the underlying yield curve and reference rate (Level 2 inputs).

The value of volatility swaps is determined primarily by obtaining valuations from independent pricing services and is based on a predetermined volatility level versus the actual amount of volatility realised over a period data of the reference asset (Level 2 or 3 inputs).

The value of variance swaps is determined primarily by obtaining valuations from independent pricing services and is based on the historical realised and expected future variance (or fair variance) of the reference asset (Level 2 or 3 inputs).

The value of correlation swaps is determined primarily by obtaining valuations from independent pricing services and is based on the difference in the realised correlation and a fixed correlation value (Level 2 or 3 inputs).

The value of contracts for difference ("CFD") is determined primarily by obtaining valuations from independent pricing services, which are based on references to the underlying asset and the stated reference rate (Level 2 or 3 inputs).

The value of swaptions is determined by obtaining valuations from independent pricing services or counterparty pricing source (Level 2 inputs).

Option contracts that are traded over-the-counter are generally valued on the basis of quotations provided by broker dealers or prices provided by independent pricing services who use a series of techniques including simulated pricing models and/or curve fitting (bootstrapping), which aids in determining the present value of the contracts. The pricing models use inputs that are observed from actively quoted markets such as issuer details, indices, spreads, interest rates, yield curves, credit curves, volatility surfaces, and exchange rates (Level 2 inputs).

The value of repurchase and reverse repurchase agreements is determined by the Manager primarily by obtaining valuations from independent pricing services, which are evaluated at par (Level 2 inputs) in line with market conventions.

FOR THE YEAR ENDED 31 DECEMBER 2025

12. FINANCIAL INSTRUMENT DISCLOSURES (CONTINUED)

(f) Fair Value of Investments (continued)

The Manager has developed a process to periodically review information provided by independent pricing services for all types of securities.

Investments in non-exchange traded investment funds are valued using the respective fund's daily calculated net asset value ("NAV") per share (Level 2 inputs), when available.

If a valuation is not available from an independent pricing service, or if the Manager has reason to believe that the valuation received does not represent the amount a Portfolio might reasonably expect to receive on a current sale in an orderly transaction, the Manager seeks to obtain quotations from brokers or dealers (generally considered Level 2 or Level 3 inputs depending on the number of quotes available). If such quotations are not available, the security is valued using methods the Board of Directors has approved in the good-faith belief that the resulting valuation will reflect the fair value of the security.

Inputs and assumptions considered in determining the fair value of a security based on Level 2 or Level 3 inputs may include, but are not limited to, the type of the security; the initial cost of the security; the existence of any contractual restrictions on the security's disposition; the price and extent of public trading in similar securities of the issuer or of comparable companies; quotations or evaluated prices from broker-dealers and/or pricing services; information obtained from the issuer and/or analysts; an analysis of the company's or issuer's financial statements; an evaluation of the inputs that influence the issuer and the market(s) in which the security is purchased and sold.

The value of the Portfolios' investments in foreign securities is generally determined using the same valuation methods and inputs as other Portfolio investments, as discussed above. Foreign security prices expressed in local currency values are normally translated from the local currency into US dollars using the exchange rates as of 4:00 p.m., Eastern Time on days the New York Stock Exchange ("NYSE") is open for business. The Board of Directors has approved the use of ICE Data Pricing & Reference Data LLC ("ICE") to assist in determining the fair value of foreign equity securities when changes in the value of a certain index suggest that the closing prices on the foreign exchanges may no longer represent the amount that a Portfolio could expect to receive for those securities or on days when foreign markets are closed and US markets are open. In each of these events, ICE will provide adjusted prices for certain foreign equity securities using a statistical analysis of historical correlations of multiple factors (Level 2 inputs). The Board of Directors has also approved the use of ICE to evaluate the prices of foreign debt securities as of the time as of which a Portfolio's share price is calculated. ICE utilizes benchmark spread and yield curves and evaluates available market activity from the local close to the time as of which a Portfolio's share price is calculated (Level 2 inputs) to assist in determining prices for certain foreign debt securities.

In the case of both foreign equity and foreign debt securities, in the absence of precise information about the market values of these foreign securities as of the time as of which a Portfolio's share price is calculated, the Board of Directors has determined on the basis of available data that prices adjusted or evaluated in this way are likely to be closer to the prices a Portfolio could realise on a current sale than are the prices of those securities established at the close of the foreign markets in which the securities primarily trade.

Fair value prices are necessarily estimates, and there is no assurance that such a price will be at or close to the price at which the security is next quoted or next trades.

The following tables show financial investments at the levels of fair value hierarchy:

* Level 3 Term Loans were valued based on a single quotation obtained from a dealer. Management has considered whether reasonably possible alternative assumptions would result in materially different fair values for these Level 3 investments and has concluded that such changes would not be material to the financial statements. All other Level 3 investments were valued in accordance with procedures approved by the Board of Directors.

Quantitative Information about Level 3 Fair Value measurements:

Investment type	Fair Value as at 31 December 2024 US$	Level Valuation approach	Significant unobservable input(s)	Input value/range	Weighted average[a]	Impact to valuation from increase in input[b]
Preferred Equity	6,584,306	Income Approach	Credit Yield Spread	3.15%	3.15%	Decrease

[a] The weighted average disclosed in the table above were weighted by relative fair value.

[b] Represents the expected directional change in the fair value of the Level 3 investments that would result from an increase or decrease in the corresponding input. Significant changes in these inputs could result in significantly higher or lower fair value measurements.

* Level 3 Term Loans were valued based on a single quotation obtained from a dealer. Management has considered whether reasonably possible alternative assumptions would result in materially different fair values for these Level 3 investments and has concluded that such changes would not be material to the financial statements. All other Level 3 investments were valued in accordance with procedures approved by the Board of Directors.

Quantitative Information about Level 3 Fair Value measurements:

Investment type	Fair Value as at 31 December 2025 US$	Level Valuation approach	Significant unobservable input(s)	Input value/range	Weighted average[a]	Impact to valuation from increase in input[b]
Common Stock	1,376,597	Market Approach	Enterprise value/Revenue multiple (EV/Revenue)	8.5x	8.5x	Increase

[a] The weighted average disclosed in the table above were weighted by relative fair value.

[b] Represents the expected directional change in the fair value of the Level 3 investments that would result from an increase or decrease in the corresponding input. Significant changes in these inputs could result in significantly higher or lower fair value measurements.

FOR THE YEAR ENDED 31 DECEMBER 2025

15. CURRENCY TRANSLATION ADJUSTMENT (CONTINUED)

A notional currency adjustment of US$ 850,195,999 (31 December 2024: US$ (329,834,723)) arose from the translation of the opening Net Assets, the Profit and Loss Accounts and the Statements of Changes in Net Assets Attributable to Redeemable Participating Shares. The method of translation has no effect on the value of the net assets attributable to the individual Portfolios.

16. SOFT COMMISSIONS ARRANGEMENTS

The Manager and connected persons have entered into soft commission arrangements with brokers in respect of research products in limited instances, subject to its receiving best execution to support the investment decision process.

The types of research received includes all standard forms of research, including but not limited to current and historical data concerning particular companies, industries and the financial economy as a whole, as well as information and opportunities, risks and trends, and analysis involving special situations. The Manager considers these arrangements are to the benefit of the Portfolios and has satisfied itself that it obtains best execution on behalf of the Portfolios.

17. SEGREGATED LIABILITY

The Company has multiple Portfolios and further Portfolios may be created in the future. With the approval of the Company's Shareholders, by way of a special resolution passed on 3 November 2006, the Company adopted segregated liability between its Portfolios. As at that date, each Portfolio bears its own liabilities and none of the Company, any of the service providers appointed to the Company, the Directors, any receiver, examiner, liquidator nor will any other person have access to the assets of a Portfolio in satisfaction of a liability of any other Portfolio.

18. EFFICIENT PORTFOLIO MANAGEMENT

The Company may employ investment techniques and instruments relating to transferable securities and/or other financial instruments including financial derivative instruments under the conditions and within the limits laid down by the Central Bank, provided that such instruments are used for efficient portfolio management purposes (i.e. hedging, reducing risks or cost, or increasing capital or income returns) or investment purposes. Techniques and instruments utilised may only be used in accordance with the investment objectives of the relevant Portfolio.

At the discretion of the Manager or the Sub-Investment Manager, each Portfolio may enter into securities lending transactions ("Securities Lending Agreements"), subject to the conditions and limits set out in the Central Bank UCITS Regulations, in respect of each of the types of assets in which the Portfolio may invest, as described in the "Instruments/Asset Classes" section of the relevant Supplement for the Portfolio. Any such securities lending transactions may be used for efficient portfolio management purposes.

Securities Lending Agreements are transactions through which a Portfolio lends its securities to another party, the borrower, which is contractually obliged to return equivalent securities at the end of an agreed period. While securities are on loan, the borrower pays the Portfolio (i) a loan fee and (ii) any income from the securities.

As of 31 December 2025 and 31 December 2024, the Company did not engage in any securities lending.

During the year ended 31 December 2025, CLO Income, Corporate Hybrid Bond, EMD Corporate – Social and Environmental Transition, Emerging Market Debt - Hard Currency, Emerging Market Debt - Local Currency, Global Flexible Credit Income, Global High Yield Engagement, High Yield Bond, Next Generation Connectivity, Short Duration Emerging Market Debt, Short Duration High Yield Engagement, Strategic Income, Sustainable Emerging Market Debt - Hard Currency, US Equity Premium, US Large Cap Value and US Long Short Equity engaged in repurchase trading and reverse repurchase trading. Total interest income arising from repurchase agreements and reverse repurchase agreements for the year ended 31 December 2025 were US$ 23,482,497 and US$ 450, respectively. Total interest expense arising from repurchase agreements and reverse repurchase agreements for the year ended 31 December 2025 were US$ 364 and US$ 157,669, respectively. Direct and indirect costs associated with efficient portfolio management techniques are not readily identifiable.

During the year ended 31 December 2024, CLO Income, Corporate Hybrid Bond, EMD Corporate – Social and Environmental Transition, Emerging Market Debt - Hard Currency, Emerging Market Debt - Local Currency, Global Flexible Credit Income, Global High Yield Engagement, High Yield Bond, Short Duration Emerging Market Debt, Short Duration High Yield Engagement, Strategic Income and Sustainable Emerging Market Debt - Hard Currency engaged in repurchase trading and reverse repurchase trading. Total interest income arising from repurchase agreements and reverse repurchase agreements for the year ended 31 December 2024 were US$ 13,619,831 and US$ 47, respectively. Total interest expense arising from repurchase agreements and reverse repurchase agreements for the year ended 31 December 2024 were US$ Nil and US$ 69,915, respectively. Direct and indirect costs associated with efficient portfolio management techniques are not readily identifiable.

FOR THE YEAR ENDED 31 DECEMBER 2025

19. LOAN FACILITY

Since 6 October 2016, arrangements have been made with The Bank of Tokyo Mitsubishi UFJ Ltd, together with a syndicate of other banks (collectively the "Lenders") to make available a committed liquidity facility (the "Facility"), to the Company in respect of the Portfolios from the date of the execution of a credit agreement with the Bank and the proceeds of the Facility could only be used for temporary or emergency liquidity needs of the Portfolios. The Facility, in the amount of US$ 850,000,000, was renewed on 25 September 2025 for the period of 364 days for all Portfolios.

There were no loans outstanding under the Facility at 31 December 2025 and 31 December 2024. During the year ended 31 December 2025 and the year ended 31 December 2024, none of the Portfolios utilised the loan facility.

20. UNFUNDED LOAN COMMITMENTS

As of 31 December 2025, the Company had the following unfunded loan commitments:

Portfolio Name	Security Name	Unfunded Commitment USD	Fair Value USD
Global Flexible Credit Income	Engineered Machinery Holdings Inc	5,309	5,363
Global Flexible Credit Income	Kaman Corp	77,834	78,341
Global Flexible Credit Income	Raven Acquisition Holdings LLC	66,500	66,961
Strategic Income	Hanger Inc	236,179	234,902
Strategic Income	Jupiter Buyer Inc	520,733	523,709

As of 31 December 2024, the Company had the following unfunded loan commitments:

Portfolio Name	Security Name	Unfunded Commitment USD	Fair Value USD
Global Flexible Credit Income	Focus Financial Partners LLC	97,350	97,998
Global Flexible Credit Income	Raven Acquisition Holdings LLC	66,500	66,900
Strategic Income	ArchKey Holdings Inc	312,440	312,914

21. SIGNIFICANT EVENTS DURING THE YEAR

With effect from 1 January 2025, MFD Secretaries Limited was appointed as a Company Secretary & Registered Office.

With effect from 1 January 2025, the Neuberger Berman Global Investment Grade Credit Fund management fee was raised from 0.10% to 0.30% on EUR I Accumulating Class.

With effect from 1 January 2025, the Neuberger Berman Next Generation Connectivity Fund management fee was reduced from 1.80% to 1.70% on USD E Accumulating Class.

A new version of the Thematic Equity Supplement to the Prospectus covering amendment relating to the misstatement of initial subscription and minimum holding amounts for the Class S category was noted by the Central Bank on 20 January 2025.

With effect from 3 February 2025, Mary Brady was appointed as Director of the Company.

With effect from 28 March 2025, Neuberger Berman China Bond Fund was terminated.

With effect from 30 June 2025, Manteio Capital LLC was appointed as a Non-Affiliated Sub-Adviser of the Company.

FOR THE YEAR ENDED 31 DECEMBER 2025

21. SIGNIFICANT EVENTS DURING THE YEAR (CONTINUED)

A new version of the Company's Prospectus and new Supplements to the Prospectus covering changes on relevant Portfolios were noted by the Central Bank on 1 July 2025. The Prospectus updates cover adding new share class types: LI, LA and LM; the ESG Policy has been updated and also renamed to the Stewardship and Sustainable Investing Policy; the Neuberger Berman Sustainable Exclusion Policy has been updated to include a specific 0.5% revenue threshold to the civilian firearms exclusion; adding a new risk factor: investment in "Distressed Debts" to Investment Risk section; updates to the NB ESG Quotient Ratings or Similar Proprietary In-House Ratings risk factor. The Supplements to the Prospectus updates cover benchmark changes on Neuberger Berman Global Flexible Credit Income Fund, Neuberger Berman EMD Corporate – Social and Environmental Transition Fund, Neuberger Berman Sustainable Asia High Yield Fund and the Neuberger Berman Emerging Market Debt Sustainable Investment Grade Blend Fund; the distribution policy of the CLO Income amendment to accommodate a monthly distributing share class.

With effect from 1 August 2025, the Neuberger Berman Next Generation Connectivity Fund management fee was reduced from 1.80% to 1.70% on ZAR E Accumulating Class.

With effect from 30 September 2025, Neuberger Berman InnovAsia Fund was terminated.

A new version of the Company's Prospectus and new Supplements to the Prospectus covering changes on all Portfolios were noted by the Central Bank on 27 November 2025.

With effect from 1 December 2025, Neuberger Berman Sustainable Asia High Yield Fund was terminated.

With effect from 17 December 2025, Neuberger Berman European Sustainable Equity Fund and Neuberger Berman Global Sustainable Equity Fund were terminated.

During the year, market uncertainty remained present due to unpredictable US tariff policies, continued public criticism of the Federal Reserve Chair and concerns about the potential volatility in the US dollar and bond yields. Volatility decreased during the year, as measured by the CBOE Volatility Index (VIX), albeit there were some sharp and short-lived spikes. From a Fixed Income perspective, fiscal overreach and debt sustainability continued to dominate the debate on sovereign fixed income valuations, albeit long-term yields are now reflecting known risks. From an Equities perspective, AI remained a key driver for equity valuations, with AI market leadership to date centered on a small group of mega-cap technology companies. Regional opportunities were also evident in 2025, supported by local governance reforms and improving returns on equity, alongside a somewhat more constructive outlook for China.

Other than the above, there have been no significant events affecting the Company during the year.

22. SIGNIFICANT EVENTS SINCE THE YEAR END

Neuberger Berman Short Duration Income Fund launched on 5 January 2026.

With effect from 1 February 2026, the Neuberger Berman Emerging Market Debt - Local Currency Fund management fee was reduced from 0.36% to 0.25% on EUR Y and USD Y Accumulating Classes, respectively.

A new version of the Tactical Macro Fund Supplement to the Prospectus covering amendment of the initial offer period run from 17 February 2026 to 14 August 2026, and the Portfolio's expected maximum leverage increase from 450% to 3000% of its Net Assets was noted by the Central Bank on 16 February 2026.

With effect from 31 March 2026, Neuberger Berman Uncorrelated Strategies Fund was terminated.

During the period from 1 January 2026 through 14 April 2026, there were significant subscriptions and redemptions exceeding 5% of the Net Assets of the relevant Portfolio shown in the table below:

Portfolio	Currency	Subscriptions	Redemptions
China Equity	USD	-	20,440,362

[+] Calculated based on the average number of shares outstanding during the period.
[++] Ratios are net of expense waiver, where applicable. The net expense ratio includes both operational and non-operational expenses and any adjustments required to comply with appropriate accounting standards.

Where applicable, ratios have been annualised.

* Share class launched during the current reporting year.
[(a)] Beginning and Ending net asset values for 31 December reflect the financial reporting NAV per Share.

FOR THE YEAR ENDED 31 DECEMBER 2025

25. DERIVATIVE CONTRACTS

The Manager of the Company is an affiliate of Neuberger Berman Group LLC, who is a registered investment adviser with the SEC in the United States. The information included here represents US GAAP equivalent disclosures that are provided in order to enable the Manager to avail of certain exemptions available to it under the SEC Custody Rule.

The Portfolios may transact in a variety of derivative instruments including swaptions, forward currency contracts, futures contracts, contracts for differences, options contracts, interest rate, credit default, cross currency, inflation, volatility, variance, correlation and total return swap contracts.

Typically derivatives serve as components of the Portfolios' investment strategy and are utilised primarily to structure and hedge investments, to enhance performance and reduce risk to the Portfolios (the Company does not designate any derivative as a hedging instrument for hedge accounting purposes).

The Company uses financial derivative instruments to economically hedge its risks associated primarily with interest rate and foreign currency fluctuations. Derivatives may also be used for trading purposes where the Manager believes this would be more effective than investing directly in the underlying financial instruments.

Derivatives often reflect, at their inception only a mutual exchange of promises with little or no transfer of tangible consideration. However, these instruments frequently involve a high degree of leverage and are very volatile. A relatively small movement in the underlying of a derivative contract may have a significant impact on the profit or loss of the Company.

The Manager closely monitors the Portfolios' exposure under derivatives as part of the overall management of the Portfolios.

The Fair Value of these derivative instruments is included in the Balance Sheet with changes in Fair Value included in Net gain/(loss) on Financial Assets and Liabilities at Fair Value through Profit and Loss Account.

The Portfolios hold forward currency contracts some of which are specific to hedged share classes. Currency rate fluctuations that impact these forwards will only affect the net assets in the respective class and not the Portfolio as a whole. Refer to the Schedules of Investments for further information on class level forward currency contracts.

The notionals summarised in the table below are for the year ended 31 December 2025 and 31 December 2024 and are indicative of the average volume of derivative activity for the year/period. The notionals are not indicative of market risk or credit risk. The amounts shown below are absolute notionals.

25. DERIVATIVE CONTRACTS (CONTINUED)

Credit-Risk-Related Contingent Features

The Portfolios' derivative contracts are subject to International Swaps and Derivatives Association ("ISDA") Master Agreements which contain certain covenants and other provisions that may require the Company to post additional collateral on derivatives or terminate these agreements if the Company fails to maintain sufficient asset coverage for its contracts or its Net Assets decline by stated percentages or amounts. The Portfolios entered into credit default swaps as part of its investment strategies, to hedge against unfavourable changes in the value of investments and to protect against adverse movements in interest rates or credit performance with counterparties. The maximum potential amount the Portfolios could be received as a buyer of credit protection if a credit event occurs as at 31 December 2025 was US$ 349,577,830 (31 December 2024: US$ 215,020,576). The maximum potential amount the Portfolios could be required to pay as a seller of credit protection if a credit event occurs as at 31 December 2025 was US$ 34,929,037 (31 December 2024: US$ 57,499,207). The aggregate fair value of all credit default swaps as at 31 December 2025 was US$ (11,308,371) (31 December 2024: US$ 5,069,085). There were no other derivative instruments with credit-risk-related contingent features held by the Company at 31 December 2025 and 31 December 2024.

26. OFFSETTING FINANCIAL INSTRUMENTS

The Manager of the Company is an affiliate of Neuberger Berman Group LLC, who is a registered investment adviser with the SEC in the United States. The information included here represents US GAAP equivalent disclosures that are provided in order to enable the Manager to avail of certain exemptions available to it under the SEC Custody Rule.

Financial assets and liabilities are offset and the net amount reported in the Balance Sheet when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the asset and settle the liability simultaneously.

For financial reporting purposes, the Company does not offset derivative assets and derivative liabilities in the Balance Sheet. The following tables present the Company's OTC derivative assets and liabilities, repurchase agreements and reverse repurchase agreements by counterparty, net of amounts available for offset under a master netting agreement and net of the related collateral received by the Company for assets and pledged by the Company for liabilities as at 31 December 2025 and 31 December 2024.

a) Collateral received (or pledged) is limited to an amount not to exceed 100% of the net amount of assets (or liabilities) in the tables presented above, for each respective counterparty.
b) A Net Amount greater than zero represents amounts subject to loss as of 31 December 2025 and 31 December 2024, in the event of a counterparty failure. A Net Amount less than zero represents amounts under collateralised to each counterparty as of 31 December 2025 and 31 December 2024.

[1] Portfolio launched during the prior reporting year.

FOR THE YEAR ENDED 31 DECEMBER 2025

27. CLOSED FUNDS

In addition to the funds detailed in this report, there are a number of terminated sub-funds that have not yet been de-authorised. A complete list of these funds is provided below. At the year ended 31 December 2025, one of these sub-funds, Lehman Brothers Commodity Plus Fund, held US$2.10m (31 December 2024: US$2.02m) in an account with the Depositary pending resolution of a disputed derivative transaction.

- Lehman Brothers Commodity Plus Fund
- Lehman Brothers Alpha Select 2 Fund
- Lehman Brothers Alpha Select 4 Fund

Appendix I

Statements of Significant Purchases and Sales (Unaudited)

In accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended, a statement of changes in the composition of the Schedule of Investments during the reporting period is provided to ensure that Shareholders can identify changes in the investments held by the Portfolio. The following statements present the aggregate purchases and sales of transferable securities exceeding one percent of the total value of purchases or sales, respectively, for the period. At a minimum, the largest twenty purchases and twenty sales are presented, if available.

Asia Responsible Transition Bond

Aggregate purchases greater than one percent of the total value of purchases:

Appendix IV

INFORMATION ON GLOBAL EXPOSURE (UNAUDITED)

Measurement of Market Risk and Leverage using the Commitment Approach and VaR

The Portfolios will seek to limit the market risk and leverage created through the use of derivatives by using either the commitment approach or by using a sophisticated risk measurement technique known as value-at-risk ("VaR"). China A-Share Equity, China Equity, Climate Innovation, CLO Income, Corporate Hybrid Bond, Developed Market FMP – 2027, Emerging Markets Equity, European High Yield Bond, Global Equity Megatrends, Global High Yield Engagement, Global Investment Grade Credit, Global Value, High Yield Bond, Japan Equity Engagement, Next Generation Connectivity, Next Generation Mobility, Next Generation Space Economy, Short Duration Emerging Market Debt, Short Duration High Yield Engagement, US Equity, US Equity Premium, US Large Cap Value, US Multi Cap Opportunities, US Real Estate Securities, US Small Cap and US Small Cap Intrinsic Value use the commitment approach. The commitment approach calculates leverage by measuring the market value of the underlying exposures of derivatives relative to the relevant Portfolio's NAV but such leverage will not exceed the Portfolio's NAV at any time.

A Portfolio may use an "absolute" VaR model where the measurement of VaR is relative to the NAV of the Portfolio or the Portfolio may use a relative VaR model where the measurement of VaR is relative to a derivatives free comparable benchmark or equivalent portfolio. The model used by certain Portfolios is noted in the column "Market Risk" in the table included below. The VaR methodology used is subject to several limitations. First, VaR is based on a model of stock price returns which uses risk factors. To the extent that there are missing risk factors, mis-specified risk factors, or risk factors which are not predictive, the VaR may not be indicative of future risk. Also, the returns to various risk factors are not directly observable in the market and must be estimated using statistical techniques. To the extent that these estimates may be imprecise, the VaR may not be indicative of future risk. In addition, the co-variance between the risk factors is estimated over a particular historical time period. To the extent that the future time period may be different from the historical time period, the VaR may not be indicative of future risk. For these reasons, VaR may be more useful as a relative measure of risk among Portfolios, rather than as an absolute measure of risk

A number of calculation standards are employed for the Portfolios using the VaR model. However, these calculation standards are dealt with in more detail in the risk management process of the Portfolio and may change from time to time at the discretion of the Manager and in accordance with the requirements of the Central Bank.

The table below detail the maximum, minimum and median usage of regulatory limit calculated during the year ended 31 December 2025 for each Portfolio using VaR (For all VaR metrics, the calibrations is a 99th percentile confidence interval based on a 1-month holding period.):

Portfolio	Market Risk	Observed VaR at 31 December 2025*	Maximum usage of Regulatory Limit**	Minimum usage of Regulatory Limit**	Median usage of Regulatory Limit**
Asia Responsible Transition Bond	Relative VaR	109.94%	61.51%	46.86%	56.46%
Commodities	Relative VaR	118.90%	59.44%	43.05%	50.64%

Appendix IV (Continued)

INFORMATION ON GLOBAL EXPOSURE (UNAUDITED) (CONTINUED)

Portfolio (continued)	Market Risk	Observed VaR at 31 December 2025*	Maximum usage of Regulatory Limit**	Minimum usage of Regulatory Limit**	Median usage of Regulatory Limit**
Uncorrelated Strategies	Absolute VaR	4.71%	35.07%	5.21%	13.47%
US Equity Premium	Absolute VaR	8.18%	58.00%	12.60%	24.35%
US Long Short Equity	Absolute VaR	4.46%	27.85%	20.20%	23.40%

*Represents the ratio of the Portfolio VaR relative to its benchmark.
**Regulatory Limit for Absolute VaR is 20% for the 1M 99% VAR. For Relative VaR it is 2* the benchmark VaR.

Depending on market conditions, the Portfolios may employ leverage from time to time. In this context, "leverage" is calculated, in accordance with the requirements of the Central Bank, as the sum of the notionals of the derivatives used. The disclosed level of leverage is not intended to be an additional risk exposure limit for the Portfolios. Furthermore, it is not intended that the leverage level by itself be indicative of the risk profile of the Portfolios. The table below details the level of leverage employed during the year ended 31 December 2025 and is calculated as the sum of the absolute value of the notionals of the derivatives used and expressed as a percentage of the Net Asset Value:

Portfolio	31 December 2025
Asia Responsible Transition Bond	31%
Commodities	102%
EMD Corporate – Social and Environmental Transition	7%
Emerging Market Debt - Hard Currency	48%
Emerging Market Debt - Local Currency	140%
Emerging Market Debt Blend	114%
Emerging Market Debt Sustainable Investment Grade Blend	101%
Euro Bond	39%
Euro Bond Absolute Return	69%
Event Driven	80%
Global Bond	232%
Global Flexible Credit Income	78%
Global Opportunistic Bond	323%
Short Duration Euro Bond	18%
Strategic Income	47%
Sustainable Emerging Market Debt - Hard Currency	72%
Tactical Macro	6%
Uncorrelated Strategies	683%
US Equity Premium	57%
US Long Short Equity	47%

Appendix V

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED)

Securities Financing Transaction Regulation ("SFTR") introduces reporting requirements for securities financing transactions ("SFTs") and total return swaps.

A Securities Financing Transaction (SFT) is defined as per Article 3(11) of the SFTR as:

- a repurchase/reverse repurchase agreement
- securities or commodities lending and securities or commodities borrowing
- a buy-sell back transaction or sell-buy back transaction, or
- a margin lending transaction

As at 31 December 2025 the following Portfolios held total return swaps and repurchase/reverse repurchase agreements as types of instruments under the scope of the SFTR:

CLO Income
Commodities
Emerging Market Debt - Hard Currency
Emerging Market Debt - Local Currency
Event Driven
High Yield Bond
Short Duration Emerging Market Debt
Short Duration High Yield Engagement
Strategic Income
Sustainable Emerging Market Debt - Hard Currency
Uncorrelated Strategies
US Equity Premium
US Large Cap Value
US Long Short Equity

Appendix V (Continued)

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

CLO Income

GLOBAL DATA:

The amount of assets across total return swaps as at 31 December 2025 was as follows:

Type of Assets	Amount US$	Proportion of NAV (%)
Total Return Swaps - Assets	81,454	0.01

DATA ON REUSE OF COLLATERAL:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

CONCENTRATION DATA:

The Portfolio did not receive any securities as collateral for the total return swaps as at 31 December 2025.

The counterparties across all total return swaps as at 31 December 2025 were as follows:

Counterparty	Amount US$
Goldman Sachs International	81,454

SAFEKEEPING OF COLLATERAL RECEIVED:

As at 31 December 2025 there was no collateral received or held with the Depositary.

AGGREGATE TRANSACTION DATA:

As at 31 December 2025 there was no collateral positions (including cash) pledged/(received) across all total return swaps.

The maturity tenor of total return swaps positions as at 31 December 2025 was 1 month to 3 months.

Appendix V (Continued)

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

CLO Income (continued)

SAFEKEEPING OF COLLATERAL GRANTED:

There was no collateral held in segregated, pooled or other accounts as at 31 December 2025.

RETURN/COSTS:

For total return swaps transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the total return swaps during the reporting period.

Commodities

GLOBAL DATA:

The amount of assets across total return swaps as at 31 December 2025 was as follows:

Type of Assets	Amount US$	Proportion of NAV (%)
Total Return Swaps - Assets	1	0.00
Total Return Swaps - Liabilities	3,321	0.00

DATA ON REUSE OF COLLATERAL:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

CONCENTRATION DATA:

The Portfolio did not receive any securities as collateral for the total return swaps as at 31 December 2025.

The counterparties across all total return swaps as at 31 December 2025 were as follows:

Counterparty	Amount US$
Goldman Sachs International	3,321
Macquarie Bank Limited	1

Appendix V (Continued)

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

Commodities (continued)

SAFEKEEPING OF COLLATERAL RECEIVED:

As at 31 December 2025 there was no collateral received or held with the Depositary.

AGGREGATE TRANSACTION DATA:

The aggregate transaction data for collateral positions (including cash) pledged/(received) across all total return swaps as at 31 December 2025 was as follows:

	Type of collateral	Amount US$*	Quality**	Maturity tenor (collateral)***	Currency of collateral	Country of counterparty establishment****	Settlement and clearing
Total Return Swap							
Goldman Sachs International	Cash Collateral	(18,990,000)	N/A	N/A	USD	United Kingdom	OTC

* Cash collaterals may cover a combination of swaps instruments, as such a portion of the collaterals relates to swap agreements not in scope of the SFTR.
** There is no credit rating for cash assets or liabilities. Cash denominated in USD is deemed to be at highest quality due to its high liquid nature.
*** Split to be provided by 7 maturity buckets (< 1 day, 1 day to 1 week, 1 week to 1 month, 1 month to 3 months, 3 months to 1 year, > 1 year, open maturity). Cash collateral has no maturity tenor.
**** Country corresponds with the address of our actual counterparty.

The maturity tenor of total return swaps positions as at 31 December 2025 was 1 month to 3 months.

SAFEKEEPING OF COLLATERAL GRANTED:

The proportion of collateral held in segregated, pooled or other accounts as at 31 December 2025was as follows:

	%
Segregated Accounts	0.00%
Pooled Accounts	0.00%
Other	100.00%
	100.00%

Reverse Repurchase Agreements - Liabilities	2,961,500	0.14

DATA ON REUSE OF COLLATERAL:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

CONCENTRATION DATA:

The Portfolio did not receive any securities as collateral for the repurchase/reverse repurchase agreements as at 31 December 2025.

The counterparties across repurchase/reverse repurchase agreements as at 31 December 2025 were as follows:

Counterparty	Amount US$
State Street Bank	28,500,000
BofA Securities	2,961,500

SAFEKEEPING OF COLLATERAL RECEIVED:

As at 31 December 2025 all collateral received is held at the Depositary, Brown Brothers Harriman Trustee Services (Ireland) Limited.

Appendix V (Continued)

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

High Yield Bond (continued)

AGGREGATE TRANSACTION DATA:

The aggregate transaction data for collateral positions (including cash) pledged/(received) across repurchase/reverse repurchase agreements as at 31 December 2025 was as follows:

	Type of collateral	Amount US$*	Quality**	Maturity tenor (collateral)***	Currency of collateral	Country of counterparty establishment****	Settlement and clearing
Repurchase Agreements							
State Street Bank	Government Bonds	29,070,139	AA+	>1 year	USD	United States	OTC
Reverse Repurchase Agreements							
BofA Securities	Corporate Bonds	(1,629,010)	B	>1 year	USD	United States	OTC
BofA Securities	Corporate Bonds	(2,039,903)	B-	>1 year	USD	United States	OTC

* Cash collaterals may cover a combination of swaps instruments, as such a portion of the collaterals relates to swap agreements not in scope of the SFTR.
** There is no credit rating for cash assets or liabilities. Cash denominated in USD is deemed to be at highest quality due to its high liquid nature.
*** Split to be provided by 7 maturity buckets (< 1 day, 1 day to 1 week, 1 week to 1 month, 1 month to 3 months, 3 months to 1 year, > 1 year, open maturity). Cash collateral has no maturity tenor.
**** Country corresponds with the address of our actual counterparty.

The maturity tenor of repurchase agreements as at 31 December 2025 was 1 day to 1 week.

The maturity tenor of reverse repurchase agreements positions as at 31 December 2025 was open.

Appendix V (Continued)

SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

High Yield Bond (continued)

SAFEKEEPING OF COLLATERAL GRANTED:

The proportion of collateral held in segregated, pooled or other accounts as at 31 December 2025 was as follows:

	%
Segregated Accounts	0.00%
Pooled Accounts	0.00%
Other	100.00%
	100.00%

RETURN/COSTS:

For repurchase agreements transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the repurchase/reverse repurchase agreements during the reporting period.

Short Duration Emerging Market Debt

GLOBAL DATA:

The amount of assets across repurchase agreements as at 31 December 2025 was as follows:

Type of Assets	Amount US$	Proportion of NAV (%)
Repurchase Agreements - Assets	10,000,000	0.20

DATA ON REUSE OF COLLATERAL:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

Appendix VI

REMUNERATION DISCLOSURE (UNAUDITED)

The European Union Directive 2014/91/EU (known as the "UCITS V Directive") came into effect on 18 March 2016. The Company has adopted a remuneration policy in order to meet the requirements of the UCITS V Directive and ESMA's Guidelines on Sound Remuneration Policies under the UCITS V Directive in a way and to the extent that is appropriate to the Company's size, internal organisation and the nature, scope and complexity of its activities.

The Company's remuneration policy applies to staff whose professional activities have a material impact on the risk profile of the Company.

As at 31 December 2025, the Company did not have any employees and the Company's remuneration policy applied only to the Company's board of directors who manage and control the Company. Please refer to Note 7 for details of Directors' remuneration.

The Directors appointed NBAMIL as the Manager to provide the day to day management of the business affairs of the Company. NBAMIL has adopted a remuneration policy in accordance with UCITS V Directive. Please refer to Note 10 for details of fees earned by NBAMIL during the years ended 31 December 2025 and 31 December 2024.

Appendix VIII

SUSTAINABLE FINANCE DISCLOSURE REGULATION (UNAUDITED)

The following Portfolios have been categorised as an Article 6 Portfolio for the purposes of Sustainable Finance Disclosure Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability- related disclosures in the financial services sector ("SFDR"): Neuberger Berman US Equity Premium Fund (Liquid Alternatives Portfolio), Neuberger Berman Tactical Macro Fund (Tactical Macro Portfolio), Neuberger Berman Event Driven Fund (Event Driven Portfolio), Neuberger Berman China Equity Fund (China Portfolio), Neuberger Berman Uncorrelated Strategies Fund (Multi Strategy Portfolio) and Neuberger Berman Commodities Fund (Commodities Portfolio).

For the purpose of the Taxonomy Regulation, it should be noted that the investments underlying the Article 6 Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The following Portfolios have been classified as an Article 8 Portfolio for the purposes of SFDR: Neuberger Berman CLO Income Fund (CLO Income Portfolio), Neuberger Berman High Yield Bond Fund, Neuberger Berman Short Duration High Yield Engagement Fund, Neuberger Berman European High Yield Bond Fund, Neuberger Berman Global High Yield Engagement Fund (High Yield Portfolios), Neuberger Berman Emerging Market Debt – Local Currency Fund, Neuberger Berman Emerging Market Debt – Hard Currency Fund, Neuberger Berman EMD Corporate – Social and Environmental Transition Fund, Neuberger Berman Short Duration Emerging Market Debt Fund, Neuberger Berman Emerging Market Debt Blend Fund, Neuberger Berman Emerging Market Debt Sustainable Investment Grade Blend Fund, Neuberger Berman Asia Responsible Transition Bond Fund (Emerging Market Debt Portfolios), Neuberger Berman Global Bond Fund, Neuberger Berman Strategic Income Fund, Neuberger Berman Corporate Hybrid Bond Fund, Neuberger Berman Global Opportunistic Bond Fund, Neuberger Berman Global Flexible Credit Income Fund, Neuberger Berman Global Investment Grade Credit Fund (Fixed Income Portfolios), Neuberger Berman Developed Market FMP - 2027 (Developed Market FMP - 2027 Portfolio), Neuberger Berman Euro Bond Absolute Return Fund, Neuberger Berman Short Duration Euro Bond Fund, Neuberger Berman Euro Bond Fund (Euro Fixed Income Portfolios), Neuberger Berman Global Value Fund (Quantitative and Multi Asset Portfolio), Neuberger Berman US Long Short Equity Fund (Liquid Alternatives Portfolio), Neuberger Berman US Equity Fund, Neuberger Berman US Small Cap Fund, Neuberger Berman US Multi Cap Opportunities Fund, Neuberger Berman US Large Cap Value Fund, Neuberger Berman US Small Cap Intrinsic Value Fund (US Equity Portfolios), Neuberger Berman Emerging Markets Equity Fund, Neuberger Berman Japan Equity Engagement Fund (Global Equity Portfolios), Neuberger Berman US Real Estate Securities Fund (Real Estate Securities Portfolio), Neuberger Berman China A-Share Equity Fund (China Portfolio), Neuberger Berman Next Generation Connectivity Fund, Neuberger Berman Global Equity Megatrends Fund, Neuberger Berman Next Generation Mobility Fund, Neuberger Berman Next Generation Space Economy Fund (Thematic Equity Portfolios) and Neuberger Berman Climate Innovation Fund (Climate Innovation Portfolio) (the "Article 8 Portfolios"). Information about the environmental and social characteristics of the Article 8 Portfolios, with the exception of unlaunched funds, is available in the Appendix below.

The Neuberger Berman Sustainable Emerging Market Debt – Hard Currency Fund (Emerging Market Debt Portfolios) has been categorised as an Article 9 Portfolio for the purposes of SFDR (the "Article 9 Portfolio").

In accordance with the requirements of Article 11 of SFDR, information in respect of each Article 8 Portfolio and the Article 9 Portfolio has been included in this Appendix.

Neuberger Berman China Bond Fund, Neuberger Berman InnovAsia Fund, Neuberger Berman European Sustainable Equity Fund, Neuberger Berman Global Sustainable Equity Fund and Neuberger Berman Sustainable Asia High Yield Fund terminated during the 2025 calendar year (the "Reference Period") and are no longer made available as financial products referred to in Article 8(1) of SFDR. Accordingly, the information referred to in Article 11 of SFDR has not been included herein.

Unless otherwise defined in this Appendix VIII, capitalised terms used shall have the meaning ascribed to them in the Prospectus.

To the extent there is any inconsistency between the Prospectus, Supplement and the Portfolio's mandatory periodic report template (as per the Requirements of Article 11 of SFDR) (the "SFDR Periodic Report") with respect to the Portfolio, the Portfolio's Supplement shall prevail. Each SFDR Periodic Report should be read in conjunction with the Prospectus and the Portfolio's Supplement.

Unless otherwise provided in a SFDR Periodic Report, each SFDR Periodic Report reports on the Reference Period.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Asia Responsible Transition Bond Fund (the "**Portfolio**")

Legal entity identifier: 54930058PUF4SZOVOD17

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 50.4% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments?* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporates:

- ***Environmental Characteristics***: biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas ("**GHG**") reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainability Related Disclosures" section of the Prospectus.

The Portfolio achieved a carbon emission intensity level that was at least 30% lower than the broader Asia debt investment universe, represented by the JP Morgan Asian Credit Index (Total Return, USD) (the "**Benchmark**"). The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes.

For the Reference Period, the Portfolio achieved a higher ESG score as compared to the broader Asia debt investment universe, represented by the Benchmark based on third-party ESG scores from an established external provider.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient

rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	60	1-100	98%
Third-Party Data	5.9	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy, the Neuberger Berman Sustainable Exclusion Policy, the EU Climate Transition Benchmark (the "**EU CTB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio.

Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	59	5.6	97%
2023 reference period	59	5.5	100%
2024 reference period	60	5.7	99%
2025 reference period	60	5.9	98%

2. Avoidance criteria

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education.

Sustainable investments were more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio targeted net zero alignment by 2050.

Consideration of revenue alignment, in the Manager's and the Sub-Investment Manager's subjective view, with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and the principal adverse impacts for sovereign issuers as outlined in Part 2 of the table below (the "**Sovereign PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective (together the **"PAIs**"**):**

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

	PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

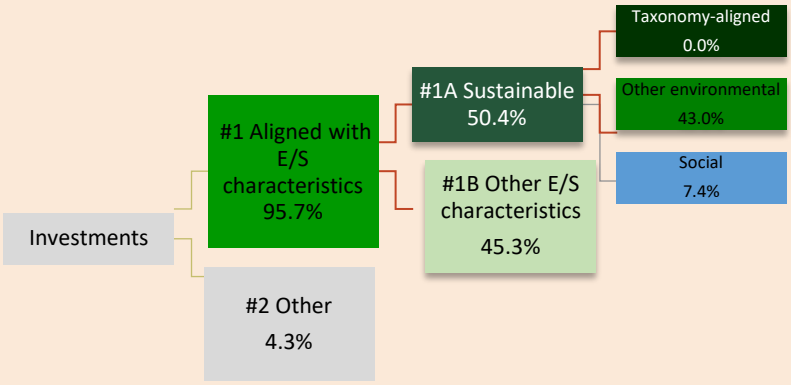
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
REPUBLIC OF PHILIPPINES REGD	Government	3.1	PHILIPPINES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	42.1
Government	17.7
Real Estate	8.2
Consumer Discretionary	5.2
Communications	4.4
Industrials	4.4
Utilities	4.3
Technology	4.1
Materials	4.0
Energy	3.4
Consumer Staples	2.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

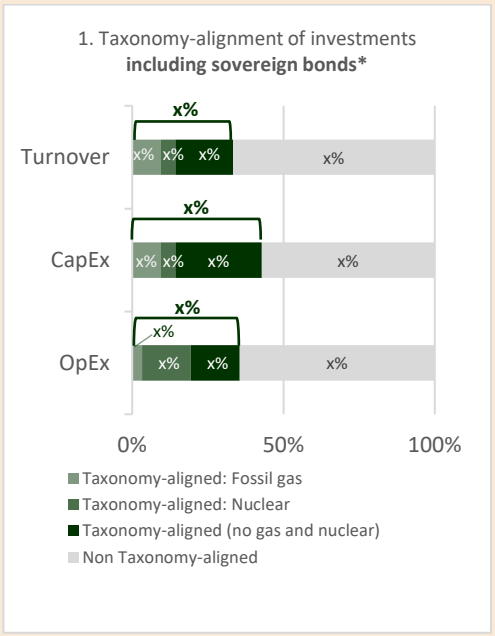
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

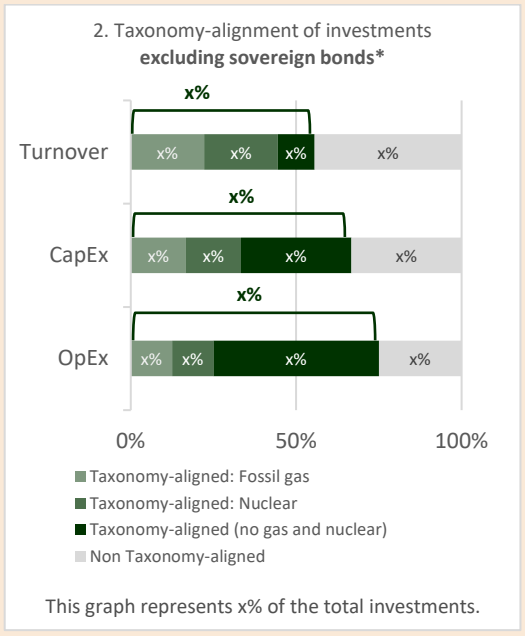
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question “What was the asset allocation?” above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question “What was the asset allocation?” above.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager's and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman China A-Share Equity Fund (the "**Portfolio**")

Legal entity identifier: 54930037QMZTCH4D7291

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: energy management; environmental management; air pollution; greenhouse gas ("**GHG**") emissions; green products and services; climate ambition and decarbonization target; water management.

- ***Social Characteristics***: employee compensation; human capital development; occupational health and safety; product quality; supply chain management; business innovation; poverty alleviation.

Performance in relation to these environmental and social characteristics was measured through the proprietary Neuberger Berman ESG rating system which focuses specifically on the Chinese market (the "**NB China ESG Quotient**") and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB China ESG Quotient:

   The NB China ESG Quotient is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB China ESG Quotient is the proprietary Neuberger Berman ("**NB**") China materiality matrix, which focuses on the environmental, social or governance characteristics that are considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector in China. The Sub-Investment Manager leveraged the NB China materiality matrix and local insight of the China market to customize the material environmental, social or governance characteristics for China A-shares. When considering China A-shares, the Sub-Investment Manager evaluated the long-term environmental, social or governance characteristics and value drivers for China's industries and the companies that operated in them.

   The NB China ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB China ESG Quotient rating for companies. Companies with a favourable and/or an improving NB China ESG Quotient rating had a higher chance of being included in the Portfolio. Companies with a poor NB China ESG Quotient rating, especially where a poor NB China ESG Quotient rating is not being addressed by a company, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager excluded companies that are ranked in the bottom 20% of the China ESG Quotient.

   The updated NB China ESG Quotient uses a rating between CCC and AAA, where CCC is lowest rating and AAA is the highest rating.

Reference Period	Rating	Range	Combined Coverage
NB China ESG Quotient	AA	**CCC-AAA**	100%
Third-Party Data	5.2	0-10	

The average NB China ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy, the Neuberger Berman Sustainable Exclusion Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB China ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB China ESG Quotient

As illustrated in the below table, the range for the NB China ESG Quotient was updated from the 2023 reference period onwards.

2022	**NB China ESG Quotient**	**Third-Party Data**	**Combined Coverage**
Range	**CCC-AA**	**0-10**	**0-100%**
2022 reference period	BBB	4.0	92%

2023-onwards	**NB China ESG Quotient**	**Third-Party Data**	**Combined Coverage**
Range	**CCC-AAA**	**0-10**	**0-100%**
2023 reference period	AAA	4.2	96%
2024 reference period	AA	4.4	100%
2025 reference period	AA	5.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs

Theme	Adverse sustainability indicator
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through the application of the avoidance criteria and involvement policies referenced above:

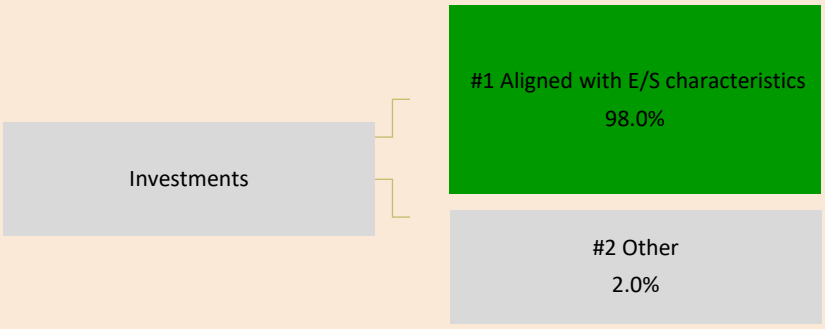
- This excluded issuers identified as being in violation of the UNGP or OECD Guidelines (PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises).
- Additionally, issuers identified as having corporate involvement in the end manufacture or manufacture of intended use components of controversial weapons (including anti-personnel mines, cluster munitions, chemical weapons and biological weapons) were also excluded (PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)).

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025



Largest investments	Sector	% Assets	Country
KWEICHOW MOUTAI CO LTD-A /CNY/	Consumer Staples	3.2	CHINA
CONTEMPORARY AMPEREX TEC /CNH/	Consumer Discretionary	3.1	CHINA
TENCENT HOLDINGS LTD /HKD/	Communications	2.8	CHINA
ZHEJIANG SANHUA INTELLIG /CNH/	Industrials	2.7	CHINA

JIANGSU HENGLI HIGHPRESS /CNY/	Industrials	1.9	CHINA
LUXSHARE PRECISION INDUS /CNH/	Technology	1.8	CHINA
CHINA YANGTZE POWER CO L /CNH/	Utilities	1.7	CHINA
MIDEA GROUP CO LTD-A /CNH/	Consumer Discretionary	1.5	CHINA

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	20.3
Technology	19.8
Consumer Discretionary	13.0
Industrials	11.2
Consumer Staples	9.5
Materials	8.9
Health Care	6.8
Communications	4.8
Energy	3.5
Utilities	1.7
Real Estate	0.5

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

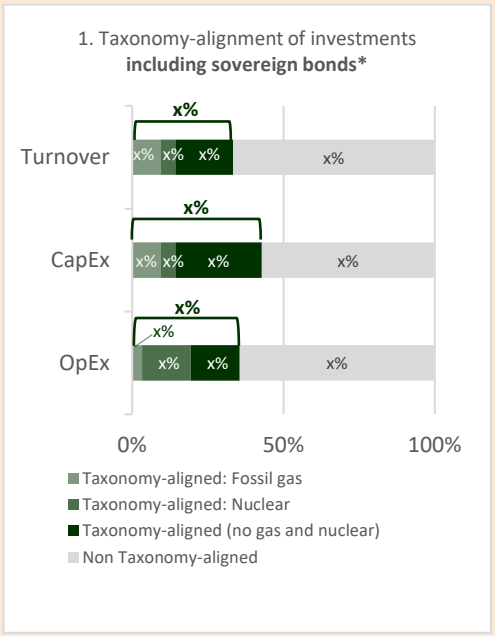
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made . The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

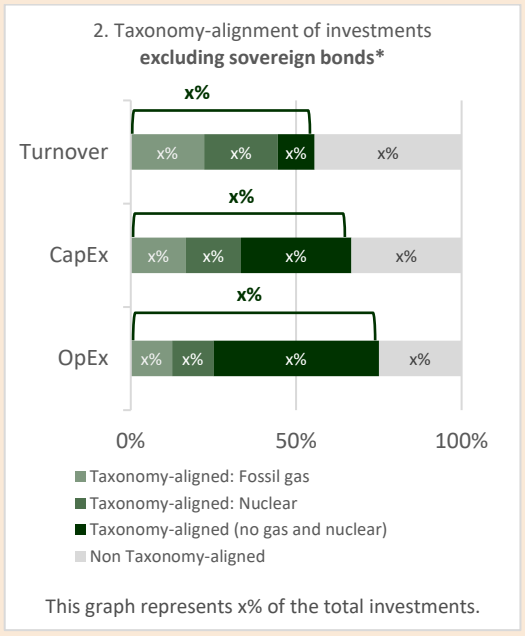
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB China ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). Additionally, the Sub-Investment Manager excluded companies that are ranked in the bottom 20% of the NB China ESG Quotient. The due diligence was supported by third-party data sources.

The NB China ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary local insight of the China market and environmental, social or governance analysis (the NB China ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities

II. Engagement:

Noting that the Sub-Investment Manager excluded companies that were ranked in the bottom 20% of the NB China ESG Quotient, engagement was limited to companies where the Sub-Investment Manager had identified scope for improvement in the company's corporate governance practices.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Climate Innovation Fund (the "**Portfolio**")

Legal entity identifier: 5493000I8IKJFVXLQ109

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.1%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

Environmental Characteristics: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

Social Characteristics: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainable Investment Criteria" section of the Prospectus.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material, environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.8	ES: A-D	100%
Third-Party Data Rating	6.9	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for companies.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

CVaR projected that a warming climate scenario could result in the following loss in the valuation of assets under assessment during the Reference Period.	-16.5%
CVaR coverage during the Reference Period.	96%

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Paris-Aligned Benchmark ("**EU PAB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2023 reference period	ES: B G: 2.7	6.8	96%
2024 reference period	ES: B G: 2.7	6.9	100%
2025 reference period	ES: C G: 2.8	6.9	100%

2. CvaR

	CVaR	**Coverage**
2023 reference period	-9.5%	96%

2024 reference period	-9.3%	96%
2025 reference period	-16.5%	96%

3. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;

- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and

- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

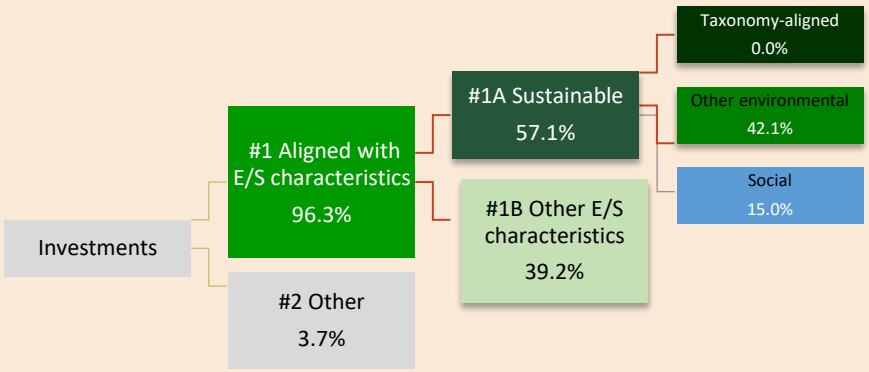
What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
GFL ENVIRONMENTAL INC-SUB VT	Industrials	6.3	CANADA
HEIDELBERG MATERIALS AG /EUR/	Materials	6.0	GERMANY
INFINEON TECHNOLOGIES AG /EUR/	Technology	4.4	GERMANY
DSM-FIRMENICH AG /EUR/	Materials	4.2	SWITZERLAND
HITACHI LTD /JPY/	Industrials	4.2	JAPAN
KIA CORP /KRW/	Consumer Discretionary	4.0	KOREA
HOWMET AEROSPACE INC	Industrials	3.5	UNITED STATES
QUANTA SERVICES INC	Industrials	3.3	UNITED STATES
TAIWAN SEMICONDUCTOR MAN /TWD/	Technology	3.3	TAIWAN
GE VERNOVA INC	Industrials	3.2	UNITED STATES
IBERDROLA SA /EUR/	Utilities	3.1	SPAIN
TECHNIPFMC PLC	Energy	3.1	UNITED KINGDOM
NVIDIA CORP	Technology	3.0	UNITED STATES
CARVANA CO	Consumer Discretionary	3.0	UNITED STATES
CONTEMPORARY AMPEREX TEC /CNH/	Consumer Discretionary	2.9	CHINA



What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Industrials	40.7
Technology	19.7
Consumer Discretionary	15.3
Materials	14.8
Energy	5.2
Utilities	3.1
Consumer Staples	1.2

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

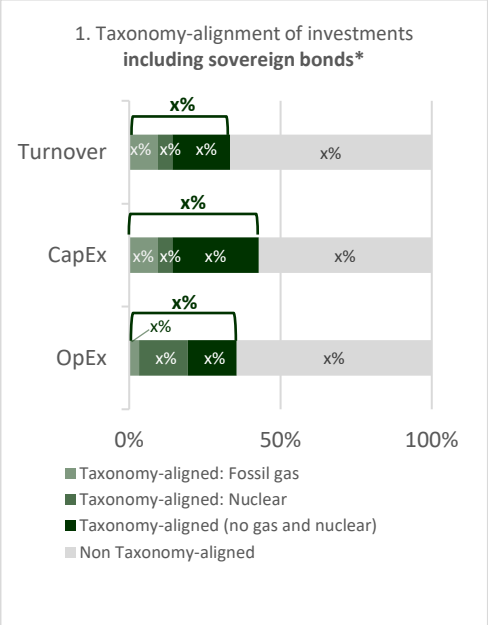
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

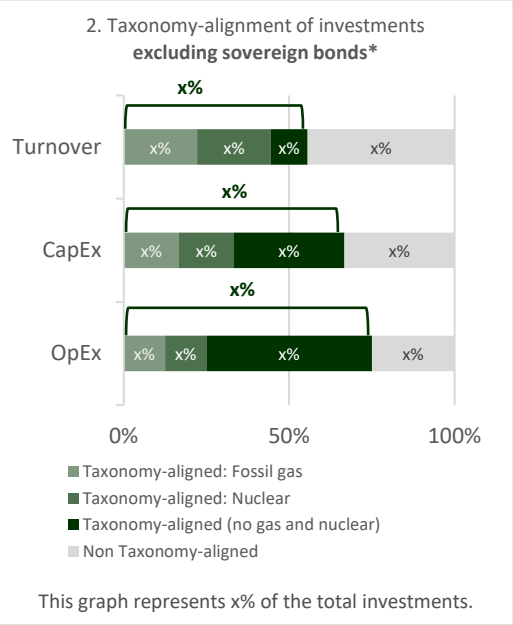
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violate environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

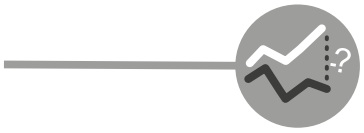
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

The Sub-Investment Manager used the NB ESG Quotient and an assessment of thematic purity to identify companies which operate within the long-term trend of Climate Innovation. Holdings with thematic purity are defined as those with at least 50% of incremental earnings/revenue growth or capex aligned with Climate Innovation related activities.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman CLO Income Fund (the "**Portfolio**")

Legal entity identifier: 54930003X66WAS12MV11

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate, GHGs emissions, and global pollution; impact on landscapes, ecosystems, and biodiversity; and
- ***Social Characteristics***: child labour; corruption, bribery, extortion and money laundering; forced labour; human rights abuses and corporate complicity; and occupational health and safety.

Performance in relation to these CLO collateral level environmental and social characteristics was measured through the NB Rating, supported by third-party data, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio at the collateral level underlying the CLO securities. These sustainability indicators are listed below:

1. **Generation of an NB Rating:**
   The NB Rating is an internal research methodology that is constructed and maintained by the Sub-Investment Manager's non-investment grade ("**Non-IG**") research analyst team (supported by third party data). The NB Rating is built around the concept of financially material environmental, social or governance risks which were considered for all collateral underlying the CLO securities.

   The NB Rating was assigned to the collateral underlying the CLO securities and was based on considerations of the above listed environmental and social characteristics. The extent to which an individual CLO collateral level environmental and social characteristics informed the NB Rating assigned (to the debt) was driven by the relevance and materiality of that specific characteristic to the corporate debt issuer and industry sector within the credit market as determined by the Sub-Investment Manager's subjective analysis.

   The NB Rating is on a scale of 1-5, where '1' is the highest rating and '5' is the lowest rating. '2' is an 'Adequate' rating where no material environmental, social or governance risks or negative environmental, social or governance incidents were identified.

   The Sub-Investment Manager ensured that the collateral underlying the CLO securities, held by the Portfolio, had an NB Rating.

2. **Performance of the NB Rating:**

   The Sub-Investment Manager measured the performance of the CLO collateral level environmental and social characteristics through the NB Rating, which is reported in aggregate below.

   - The Sub-Investment Manager ensured that, on a Portfolio level basis (aggregating all of the collateral across every CLO security owned in the Portfolio), the Portfolio had a higher concentration of NB Rating '1' and '2' ratings than the Investable Universe (as defined below).
     This Investable Universe was defined as all Euro CLO securities as well as: (i) USD CLO securities issued prior to 2019; and (ii) USD CLO securities issued after November 2022. The USD CLO securities, issued after November 2022, must meet the EU Risk Retention rules and Article 7 of the EU Securitisation Regulation reporting standards (the "**Investable Universe**").

- The Sub-Investment Manager ensured that a minimum of 70% of the collateral underlying CLO securities had an NB Rating of '1' or '2'. This was calculated across all holdings in the Portfolio and is outlined in the below table.

	Minimum security-level commitment	**Minimum security-level commitment achieved**	**Investable Universe of CLO tranches**	**Fund-wide exposure to '1' and '2' rated credits**
NB Rating '1' or '2' credits held by collateral underlying CLO securities during the Reference Period	70%	Yes - 100% of CLO securities held have at least 70% '1' or '2' rated credit exposure	80%	82%

3. **Avoidance criteria and involvement policies:**

The Sub-Investment Manager ensured that the Portfolio did not invest in CLO securities that had been identified as including loan collateral associated with borrowers that had been identified as breaching the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. Furthermore, the Portfolio did not invest in CLOs that included loan collateral associated with borrowers that have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of the UNGC Principles, the OECD Guidelines, the UNGPs and the ILO Standards. The Sub-Investment Manager also applied the other specific exclusions detailed in the SFDR Annex of the Portfolio.

…and compared to previous periods?

Exceptionally for 2024 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2024, being the only quarter end in the reference period that followed the reclassification of the Portfolio.

1. NB Rating

NB Rating '1' or '2' credits held by collateral underlying CLO securities compared to previous periods:

	Minimum security-level commitment	**Minimum security-level commitment achieved**	**Investable Universe of CLO tranches**	**Fund-wide exposure to '1' and '2' rated credits**
2024	70%	Yes - 100% of CLO securities held have at least 70% '1' or '2' rated credit exposure	80%	82%

2025	70%	Yes - 100% of CLO securities held have at least 70% '1' or '2' rated credit exposure	80%	82%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in CLO investments whose underlying portfolio of loans had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through the application of the avoidance criteria and involvement policies referenced above:

- This excluded issuers identified as being in violation of the UNGP or OECD Guidelines (PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises).
- Additionally, issuers identified as having corporate involvement in the end manufacture or manufacture of intended use components of controversial weapons (including anti-personnel mines, cluster munitions, chemical weapons and biological weapons) was also excluded (PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)).

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 CLO tranches.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The top economic sectors of the CLO tranches held by the Portfolio during the Reference Period are as follows:

Economic Sector – BICS	% Assets
Securitized	99.7
Government	0.3

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

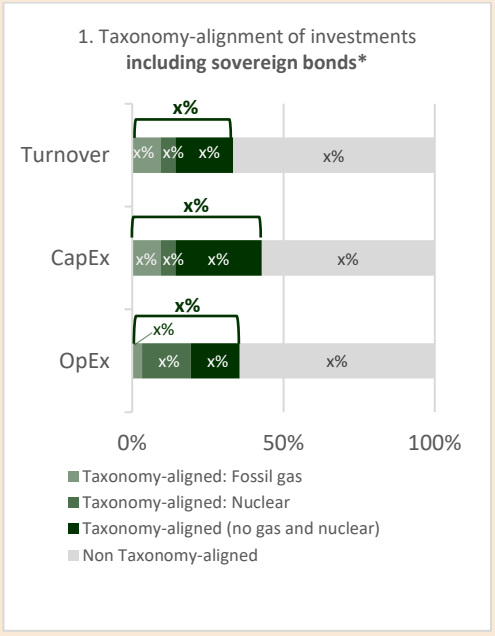
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

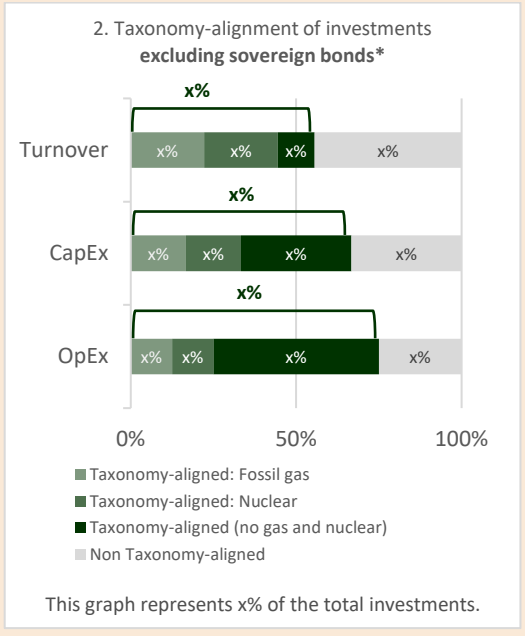
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A - the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - the Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. It also includes underlying collateral which obtained an NB Rating of '3' or lower.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The NB Rating supplemented the Sub-Investment Manager's qualitative analysis with quantitative data to holistically consider financially material environmental, social or governance factors and all financially material factors that may affect a company's performance and outlook.

Subject to data availability, the NB Rating considered the individual companies and their debt (that are part of the collateral of CLO securities) and then assigned an NB Rating to the debt based on considerations of the above CLO collateral level environmental and social characteristics. The extent to which an individual CLO collateral level environmental or social characteristic informed the NB Rating assigned (to the debt) was driven by the relevance and materiality of that specific characteristic to the corporate debt issuer and industry sector within the Non- IG credit market as determined by the Sub-Investment Manager's subjective analysis.

II. Engagement:

Due to the nature of the asset class, the Sub-Investment Manager cannot engage directly with companies which are subject to financially material environmental, social or governance risks or negative environmental, social and governance incidents but instead assesses CLO Managers through the Annual CLO Manager Questionnaire' as set out in the SFDR Annex.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

How did this financial product perform compared with the broad market index?

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Corporate Hybrid Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300TMYI9EFR4Q1G47

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.5% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments*"? question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim of seeking improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage

NB ESG Quotient	59	1-100	99%
Third-Party Data	7.1	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their

research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	58	6.9	96%
2023 reference period	59	7.3	100%
2024 reference period	60	7.4	100%
2025 reference period	59	7.1	99%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective during the reference period. However, the Portfolio held sustainable investments which promoted the environmental and social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any

environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

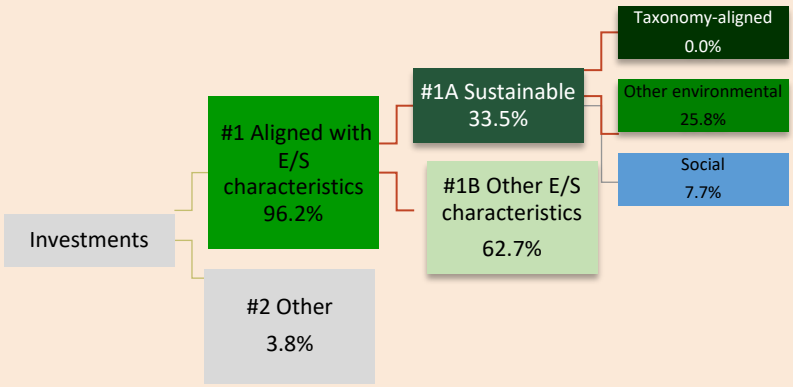
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Utilities	44.8
Communications	18.8
Energy	14.8
Real Estate	10.2
Consumer Discretionary	4.6
Health Care	3.4
Materials	1.8
Industrials	0.9
Fund	0.6
Financials	0.1
Technology	0.0*
Government	0.0*
Consumer Staples	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

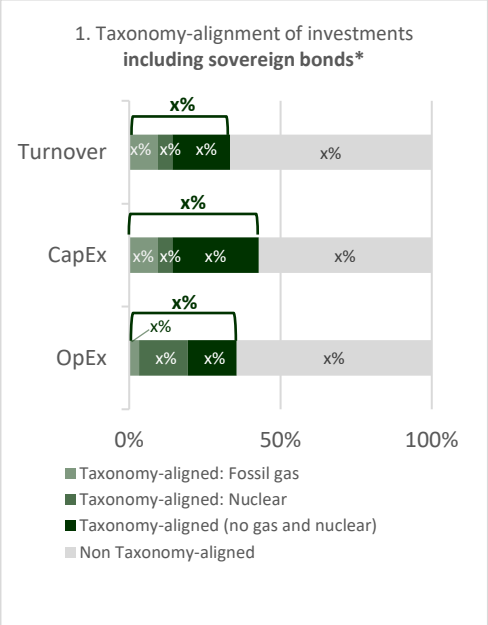
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

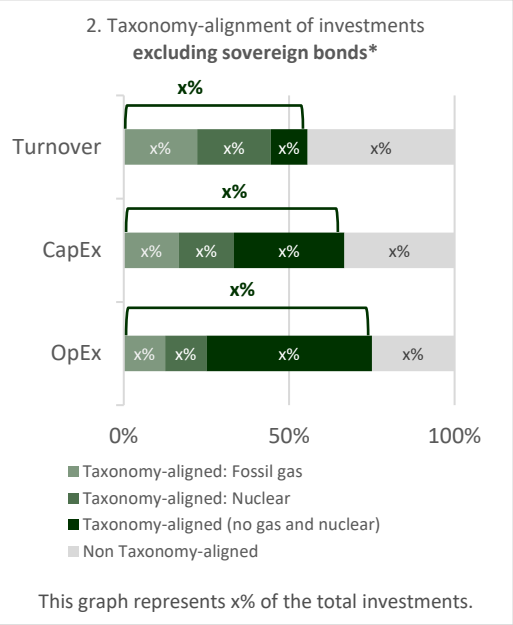
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

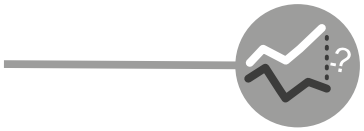
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Developed Market FMP – 2027 (the "**Portfolio**")

Legal entity identifier: 549300GF7EOMWXAHXG64

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Given the Portfolio's investment objective, investment term and maturity date of 31 July 2027 (the "**Maturity Date**"), the Portfolio's turnover was limited. Therefore, while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics was focused on the portfolio construction phase.

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; GHG emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.
- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	61	1-100	100%
Third-Party Data	6.4	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental ,social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their

research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

Given the Portfolio sought to provide a yield over a specific term, which ends on the Maturity Date, the Portfolio's turnover was limited.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2023 reference period	60	6.4	100%
2024 reference period	61	6.5	100%
2025 reference period	61	6.4	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

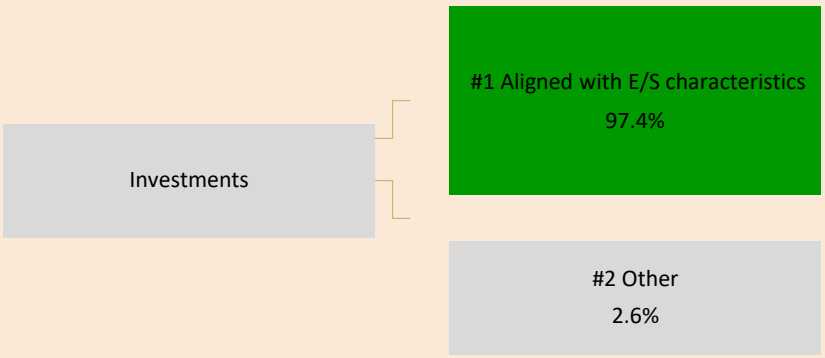
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
SANTANDER UK GROUP HLDGS REGD V/R	Financials	3.2	UNITED KINGDOM

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

.

Economic Sector – BICS	% Assets
Financials	34.6
Consumer Discretionary	13.3
Energy	11.0
Communications	10.6
Health Care	5.4
Industrials	5.2
Technology	4.9
Consumer Staples	4.6
Real Estate	4.3
Utilities	3.1
Materials	3.0

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

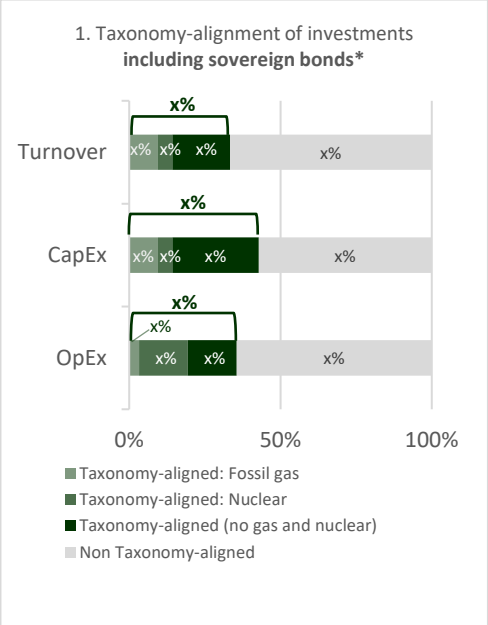
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

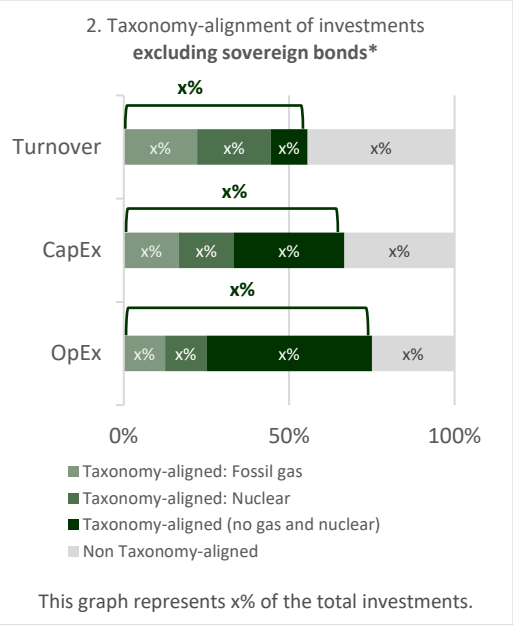
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Given the Portfolio's investment objective, investment term and Maturity Date, while the Portfolio promotes environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics was focused on the portfolio construction phase as the intention of the Sub-Investment Manager was to maintain low turnover.

The Portfolio was managed in-line with the investment objective and the following actions were taken:

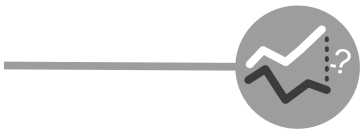
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process as it allowed the Sub-Investment Manager to ensure that its initial assessment of the issuer (at the point of inception) remained accurate and informed the issuer's ongoing

NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio does not use a benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman EMD Corporate – Social and Environmental Transition Fund (the "**Portfolio**")

Legal entity identifier: 549300GFVSJXLSLRQ502

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.4%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas ("**GHG**") reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Portfolio achieved a carbon emission intensity level that was at least 30% lower than the Emerging Market Countries corporate debt investment universe, represented by the Benchmark (excluding securities issued by non-corporate issuers, which include public or quasi-public issuers (i.e. sovereign issuers), and cash or cash equivalents) ("**Excluded Securities**"). The Portfolio was actively managed and did not track the Benchmark which was included here for carbon emission intensity reduction and ESG comparison purposes.

For the Reference Period, the Portfolio achieved a higher ESG score (as assigned by a third-party data provider) as compared to the Emerging Markets corporate debt investment universe, represented by the Benchmark.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor

NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	60	1-100	99%
Third-Party Data	5.8	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Climate Transition Benchmark (the "**EU CTB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. The NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	**1-100**	**0-10**	**0-100%**
2022 reference period	59	5.5	98%
2023 reference period	60	5.6	100%
2024 reference period	59	5.6	98%
2025 reference period	60	5.8	99%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

I. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

II. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

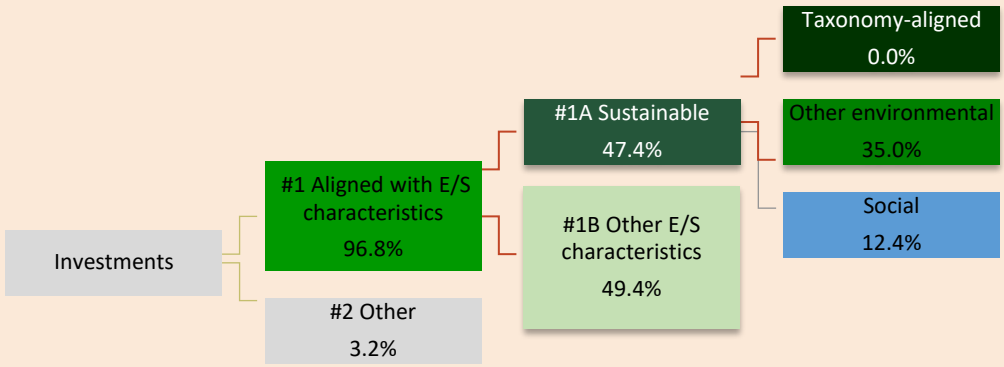
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
IVORY COAST /EUR/ REGD REG S	Government	1.0	COTE DIVOIRE

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	28.0
Materials	14.4
Energy	12.5
Communications	9.2
Consumer Discretionary	6.5
Utilities	5.9
Government	5.6

Industrials	5.5
Real Estate	4.8
Consumer Staples	3.4
Technology	3.1
Health Care	1.1

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

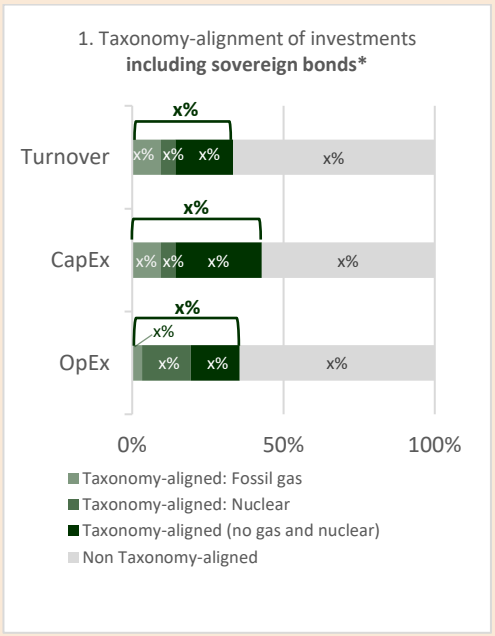
- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

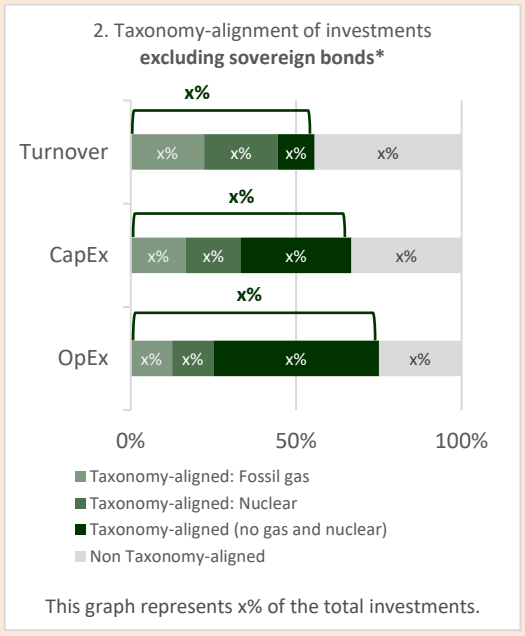
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

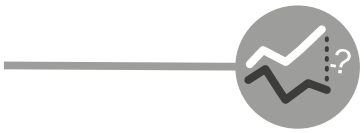
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach consider financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Emerging Market Debt – Hard Currency Fund (the "**Portfolio**")

Legal entity identifier: 549300M7KHGG3BTZ3979

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.7% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

*Please refer to the "*What was the proportion of sustainability-related investments?* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- ***Environmental Characteristics***: sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("**GHG**") emissions; air and household pollution; and unsafe sanitation.

- ***Social Characteristics***: progress towards UN Sustainable Development Goals ("**SDGs**"); health and education levels; regulatory quality; political stability and freedoms; workforce inclusivity; and research and development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- ***Environmental Characteristics***: biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	51	1-100	99%
Third-Party Data	3.6	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	51	3.8	96%
2023 reference period	52	3.9	97%
2024 reference period	52	3.7	98%
2025 reference period	51	3.6	99%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in Part 1 of the below table for corporate issuers (the "**PAIs**") and the principal adverse impacts for sovereign issuers as outlined in Part 2 of the table below (the "**Sovereign PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Part 1 – PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs and Sovereign PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

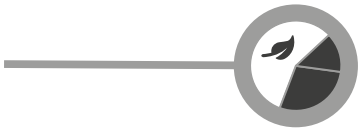
Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

1. Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;

2. Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

3. Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.



What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
PETROLEOS MEXICANOS REGD SER WI	Energy	2.9	MEXICO

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	71.7
Energy	15.4
Materials	3.9
Utilities	3.4
Financials	3.0
Industrials	1.1
Consumer Staples	0.7
Communications	0.5
Real Estate	0.2
Consumer Discretionary	0.1

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

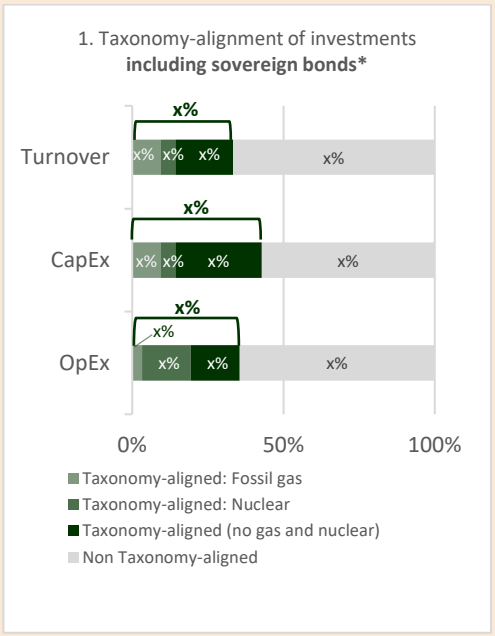
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

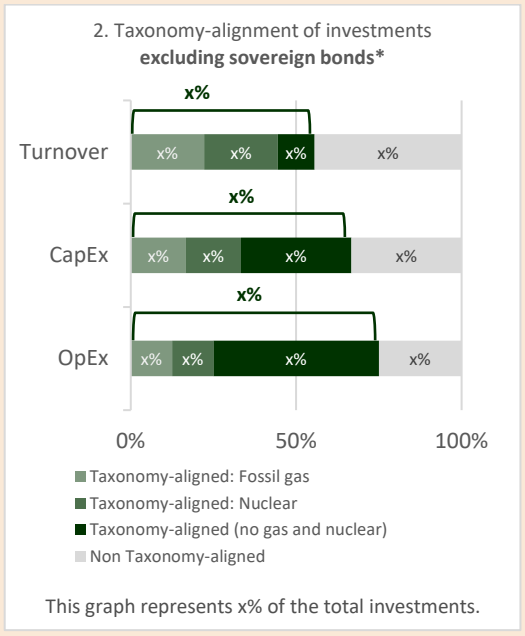
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

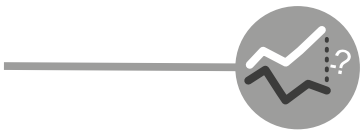
I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.



II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark..

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Emerging Market Debt – Local Currency Fund (the "**Portfolio**")

Legal entity identifier: 549300VLRPBFFXL0DB81

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- ***Environmental Characteristics***: sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("**GHG**") emissions; air and household pollution; and unsafe sanitation.

- ***Social Characteristics***: progress towards UN Sustainable Development Goals ("**SDGs**"); health and education levels; regulatory quality; political stability and freedoms; workforce inclusivity; and research and development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- ***Environmental Characteristics:*** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics:*** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy***.***

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	53	1-100	96%
Third-Party Data	4.3	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	54	4.8	96%
2023 reference period	55	4.8	97%

2024 reference period	54	4.5	98%
2025 reference period	53	4.3	96%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A - the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A - the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A - the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

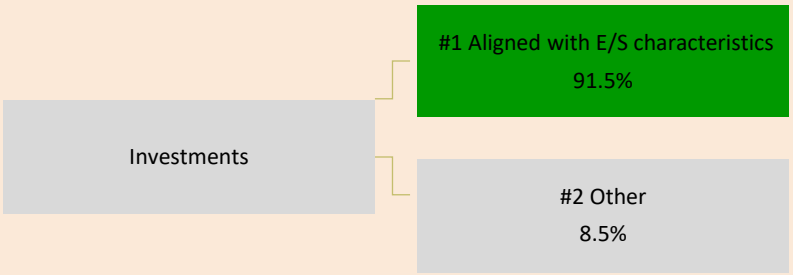
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	96.5
Financials	1.8
Utilities	1.7

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

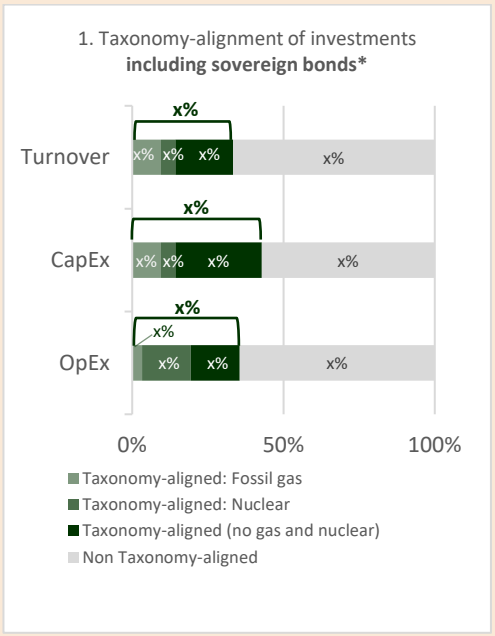
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

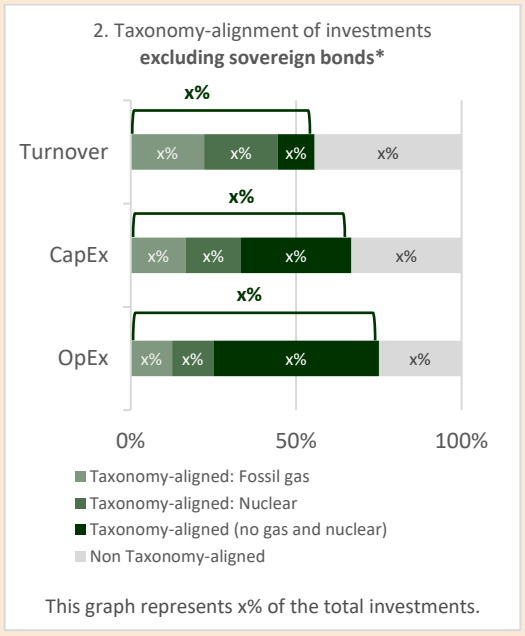
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- ***Environmental Characteristics***: sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("**GHG**") emissions; air and household pollution; and unsafe sanitation.

- ***Social Characteristics:*** progress towards UN Sustainable Development Goals ("**SDGs**"); health and education levels; regulatory quality; political stability and freedoms; workforce inclusivity; and research and development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- ***Environmental Characteristics***: biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	54	1-100	98%
Third-Party Data	4.4	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	54	4.6	95%
2023 reference period	55	4.7	97%
2024 reference period	54	4.6	98%

2025 reference period	54	4.4	98%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A - the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A - the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A - the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
MEX BONOS DESARR FIX RT /MXN/ REGD SER M	Government	1.8	MEXICO
MEX BONOS DESARR FIX RT /MXN/ REGD SER M	Government	1.3	MEXICO
INDIA GOVERNMENT BOND /INR/ REGD	Government	1.3	INDIA
REPUBLIC OF SOUTH AFRICA /ZAR/ REGD SER 2044	Government	1.3	SOUTH AFRICA
TURKIYE GOVERNMENT BOND /TRY/ REGD SER 10Y	Government	1.2	TURKEY

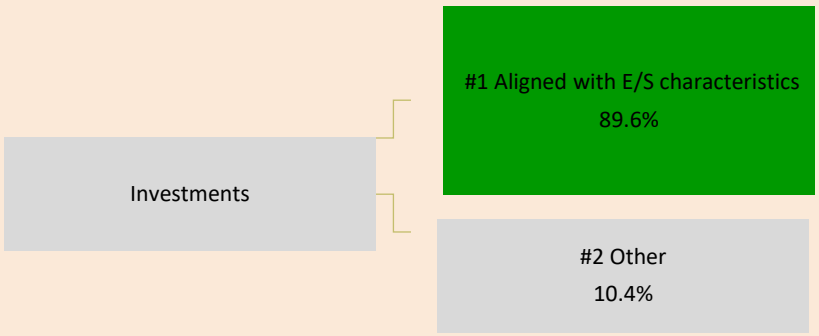
REPUBLIC OF SOUTH AFRICA /ZAR/ REGD SER 2040	Government	0.8	SOUTH AFRICA
REPUBLIC OF SOUTH AFRICA /ZAR/ REGD SER 2037	Government	0.7	SOUTH AFRICA



What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	70.2
Energy	6.8
Financials	6.6
Materials	4.3
Utilities	4.2
Communications	2.2
Industrials	1.8
Consumer Discretionary	1.5
Real Estate	1.0
Consumer Staples	0.9
Technology	0.3
Health Care	0.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

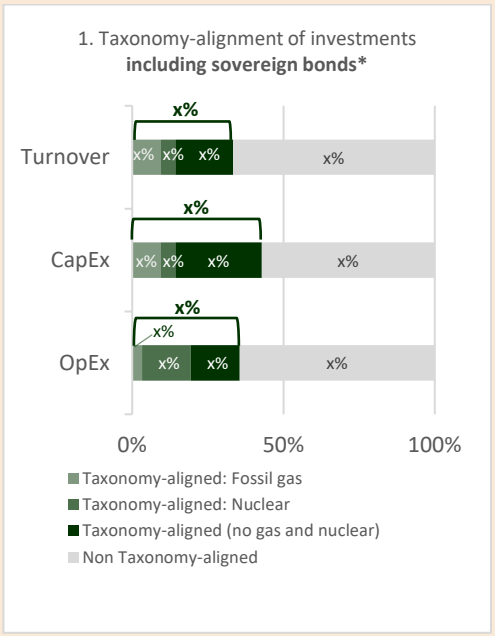
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

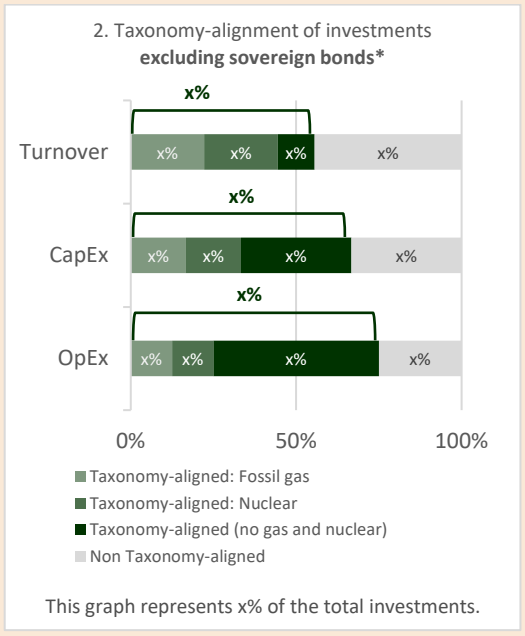
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

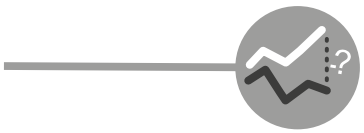
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.



II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Emerging Market Debt Sustainable Investment Grade Blend (the "**Portfolio**")

Legal entity identifier: 549300IFJK0FPOE1X496

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64.3%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio, for sovereign issuers:

- ***Environmental Characteristics***: sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("**GHG**") emissions; air and household pollution; and unsafe sanitation.

- ***Social Characteristics***: progress towards UN Sustainable Development Goals ("**SDGs**"); health and education levels; regulatory quality; political stability and freedoms; workforce inclusivity; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- ***Environmental Characteristics***: biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "*Sustainable Investment Criteria*" section of the Prospectus.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. The Portfolio did not invest in issuers which rank

in the bottom decile in terms of their NB ESG Quotient, with no near term improvement prospects.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	98%
Third-Party Data	4.7	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Paris-Aligned Benchmark ("**EU PAB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	56	4.8	97%
2023 reference period	57	4.8	99%
2024 reference period	58	4.8	99%
2025 reference period	58	4.7	98%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**"); and

- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in Part 1 of the below table for corporate issuers (the "**PAIs**") and the principal adverse impacts for sovereign issuers as outlined in Part 2 of the table below (the "**Sovereign PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Part 1 – PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 – GHG emissions PAI 2 – Carbon footprint PAI 3 – GHG intensity of investee companies PAI 4 – Exposure to companies active in the fossil fuel sector PAI 5 – Share of non-renewable energy consumption and production PAI 6 – Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 – Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 – Emissions to water

Waste	PAI 9 – Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 – Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 – Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 – Unadjusted gender pay gap PAI 13 – Board gender diversity PAI 14 – Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

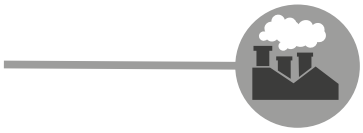
The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

I. All PAIs and Sovereign PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in "*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*" above.

II. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the Sovereign PAIs as outlined below in Part 2 for sovereign issuers when considering the principal adverse impacts on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**

Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

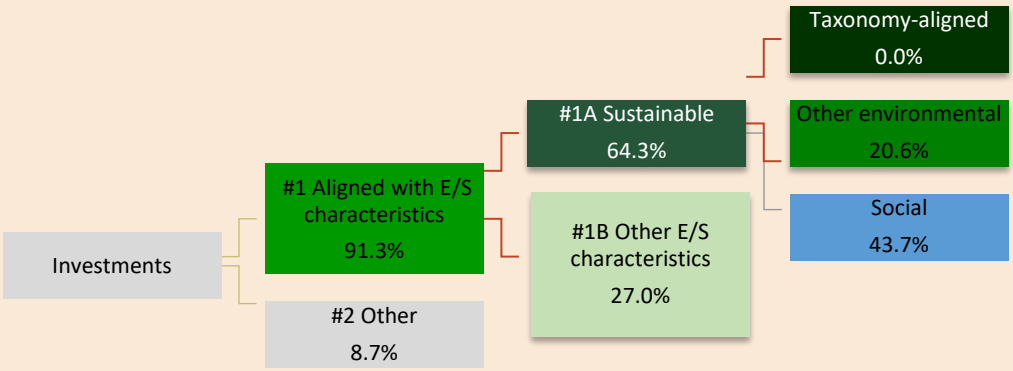
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
REPUBLIC OF PERU REGD	Government	3.8	PERU

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	84.2
Financials	5.5
Materials	4.2
Industrials	3.5
Communications	1.0
Technology	0.6
Consumer Staples	0.5
Energy	0.3
Utilities	0.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

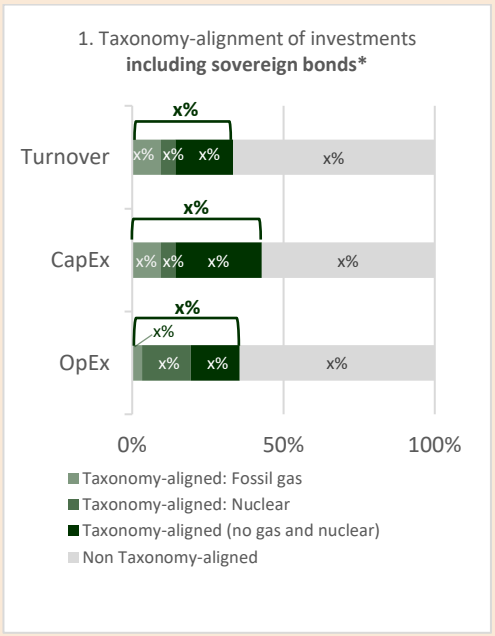
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

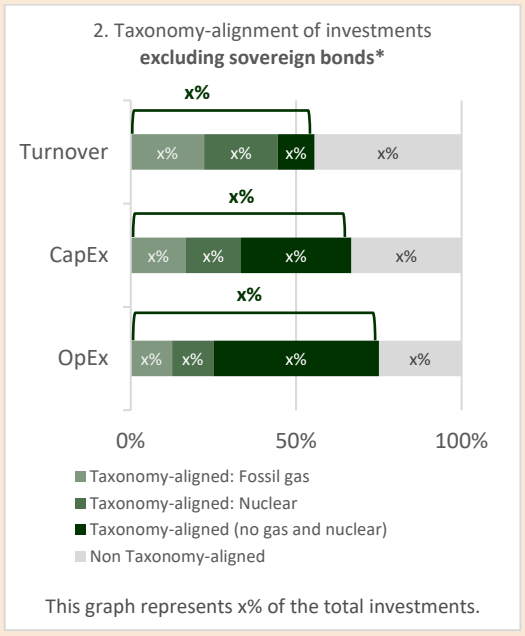
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

. This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Emerging Markets Equity Fund (the "**Portfolio**")

Legal entity identifier: 549300XPW2SIPQYGFT52

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: air quality; energy management; fuel economy; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; waste management; water management; raw materials sourcing; product lifecycle management; biodiversity & land use; and climate risks.

- ***Social Characteristics***: access to finance; access to healthcare; data privacy & security; health & safety; human capital development; labour management; product safety, quality & integrity; supply chain Management; business ethics; community relations; controversial sourcing; management of legal & regulatory environment; operational safety & emergency preparedness; pricing transparency; workforce inclusivity; health & nutrition; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector in Emerging Markets. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies in Emerging Markets relative to their environmental and social characteristics.

   By embedding local insight into the global NB materiality matrix, the Sub-Investment Manager leveraged the global NB materiality matrix and customized financially material environmental, social or governance factors to ensure that they were bespoke for Emerging Markets. The NB materiality matrix fully considered the long-term financially material environmental, social or governance factors that affected the development of Emerging Markets' industries and companies and sought out companies that were value drivers in the Emerging Markets.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. The Sub-investment Manager engaged with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.4	ES: A-D	96%
Third-Party Data	6.0	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their

research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.0	5.6	95%
2023 reference period	ES: B G: 2.7	5.9	90%
2024 reference period	ES: B G: 2.6	6.2	94%
2025 reference period	ES: B G: 2.4	6.0	96%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

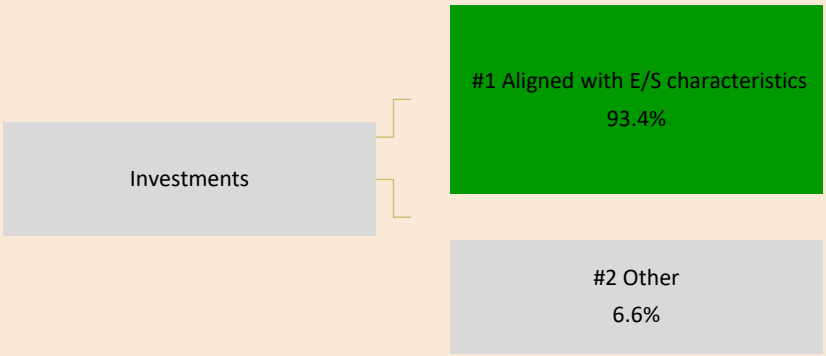
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR-SP ADR	Technology	10.1	TAIWAN

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments m ade?

Economic Sector – BICS	% Assets
Technology	28.0
Financials	20.9
Consumer Discretionary	15.4
Industrials	11.2
Communications	10.7
Materials	3.6
Health Care	3.2
Consumer Staples	2.8
Energy	2.2
Utilities	1.2
Real Estate	0.8

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

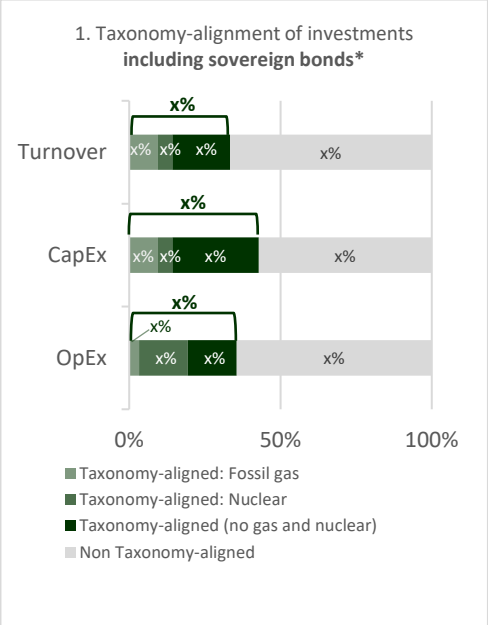
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

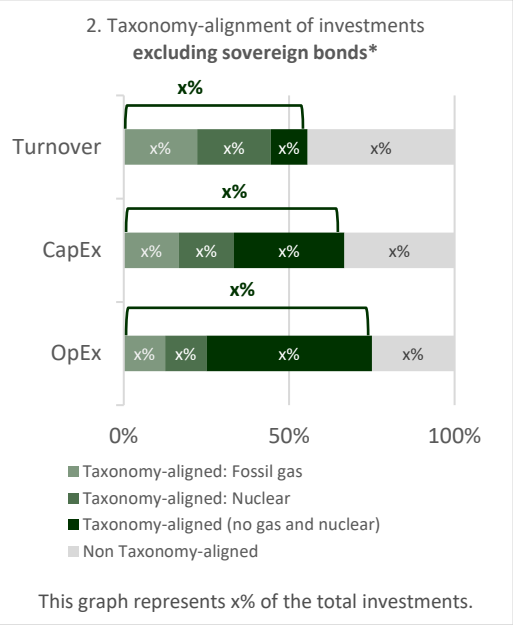
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

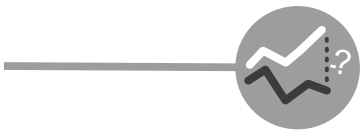
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

The Sub-Investment Manager kept an active dialogue with companies, regardless of whether or not they had high impact controversies or a poor NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Euro Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300TQ5M6FBE2H8T74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ✖ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	✖ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	65	1-100	96%
Third-Party Data	6.5	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	66	6.0	90%
2023 reference period	65	6.3	95%
2024 reference period	64	6.5	95%
2025 reference period	65	6.5	96%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of issuers) throughout the Reference Period.

The Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

	PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	58.6
Financials	20.1
Real Estate	4.5
Industrials	4.1
Consumer Discretionary	3.4
Utilities	2.2

Materials	2.0
Communications	1.7
Health Care	1.6
Energy	0.7
Consumer Staples	0.6
Technology	0.5

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

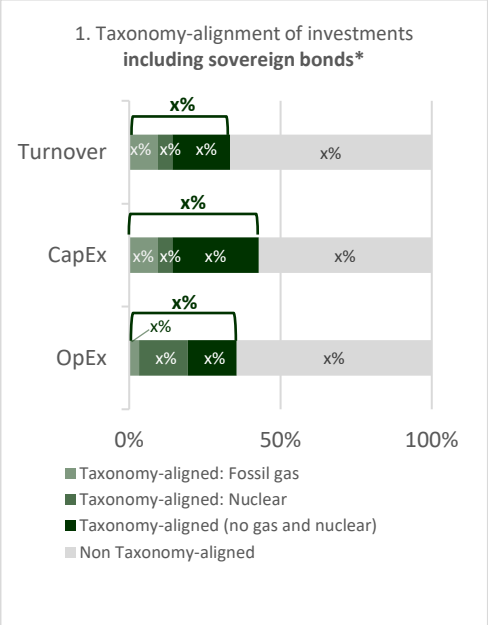
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

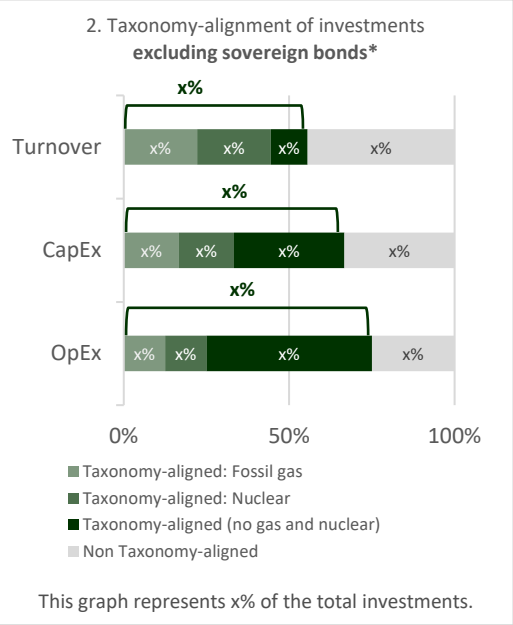
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	65	1-100	97%
Third-Party Data	6.3	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	66	6.5	94%
2023 reference period	65	6.8	97%
2024 reference period	65	6.7	96%
2025 reference period	65	6.3	97%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Manager did not invest in issuers whose activities had been identified as breaching,

or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of issuers) throughout the Reference Period.

The Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
NYKREDIT REALKREDIT A/S /DKK/ REGD REG S SER 01E	Financials	2.9	DENMARK
SPAIN I/L BOND /EUR/ REGD	Government	2.4	SPAIN
SPAIN I/L BOND /EUR/ REGD	Government	1.4	SPAIN

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	56.3
Financials	20.0
Real Estate	4.2
Consumer Discretionary	4.2
Securitized	3.4
Industrials	3.2
Utilities	2.4
Materials	1.9
Communications	1.8
Health Care	1.0
Energy	0.7
Technology	0.5
Consumer Staples	0.4

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

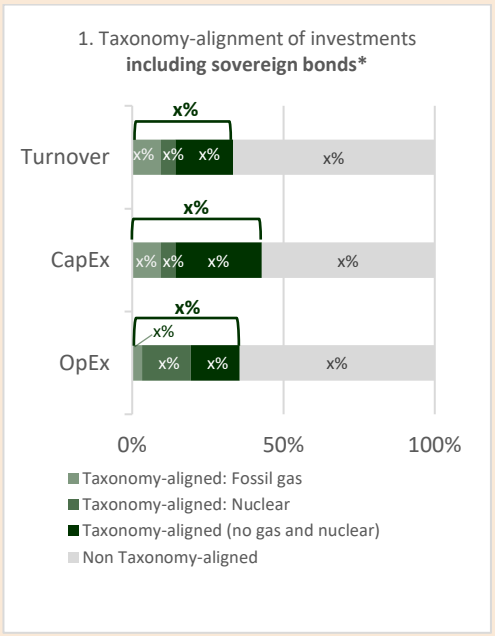
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

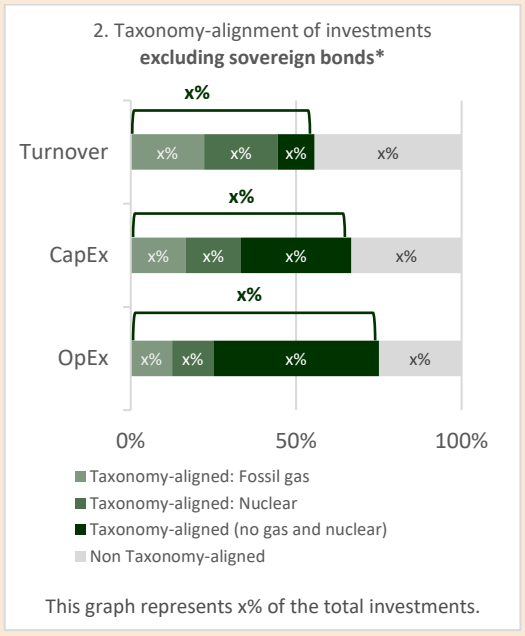
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman European High Yield Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300Z7RL5FC5H5DB41

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 20.0% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; GHG emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with corporate issuers.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	59	1-100	99%

Third-Party Data	6.0	0-10	

With regards to the NB ESG Quotient rating, a rating between 1-100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, due to data limitations resulting in limited CVaR coverage, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	59	5.5	98%
2023 reference period	60	6.1	99%
2024 reference period	59	6.1	98%
2025 reference period	59	6.0	99%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the SDGs; and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective.

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

	PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

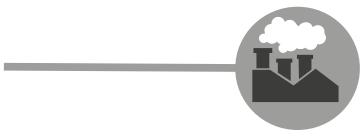
The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third- party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

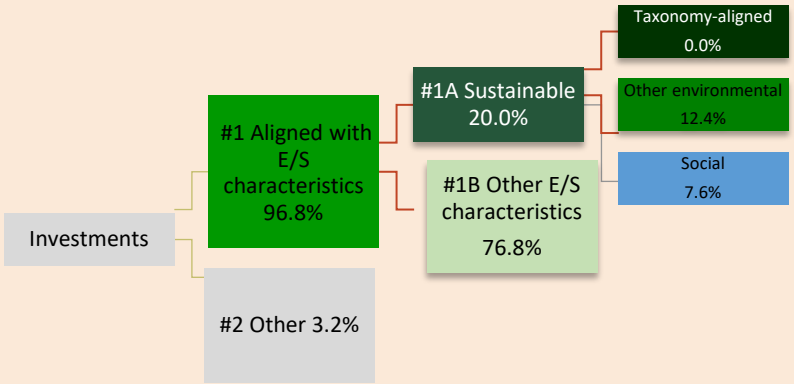
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
TEVA PHARM FNC NL II /EUR/ REGD	Health Care	1.4	NETHERLANDS

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Consumer Discretionary	20.3
Industrials	16.4
Communications	16.2
Health Care	11.0
Materials	8.2
Utilities	8.1
Real Estate	7.6
Consumer Staples	7.5
Technology	2.8
Securitized	0.8
Financials	0.8
Energy	0.3

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

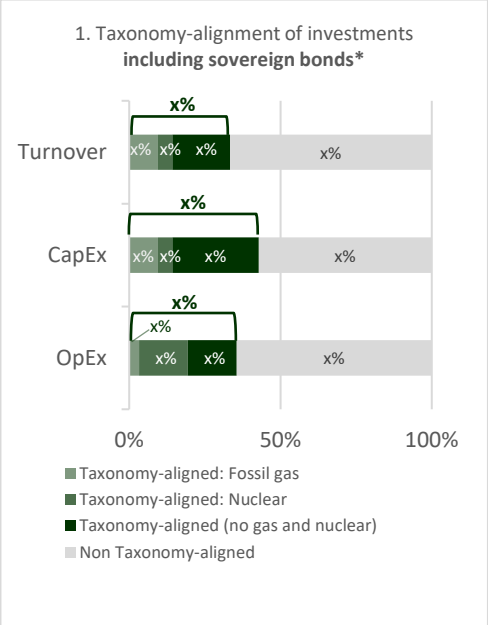
- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

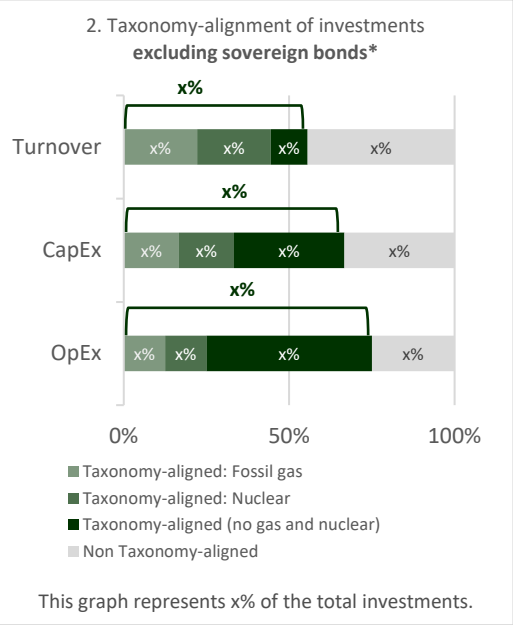
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

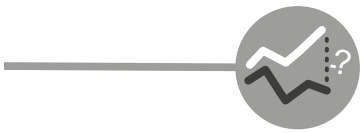
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300RDJHEJZZ6XVX05

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	64	1-100	72%*
Third-Party Data	6.4	0-10	

*The Combined Coverage excludes securitised debt exposure (eg CMBS, CMO and MBS). Some securitised debt exposures are considered as investments aligned with the environmental and/or social characteristics promoted by the Portfolio, as reported in the asset allocation chart.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where

possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	68	6.5	77%
2023 reference period	66	6.6	67%
2024 reference period	67	6.6	67%
2025 reference period	64	6.4	72%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	34.0
Securitized	30.3
Financials	11.0
Communications	3.8
Technology	3.8
Utilities	3.7
Consumer Discretionary	2.7
Health Care	2.7
Industrials	2.6
Energy	1.5
Real Estate	1.3
Materials	1.0
Government-Related	0.7
Consumer Staples	0.5
Municipals	0.4

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

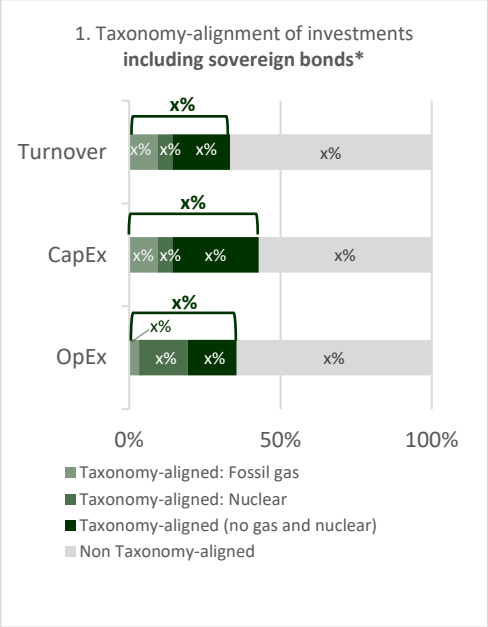
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

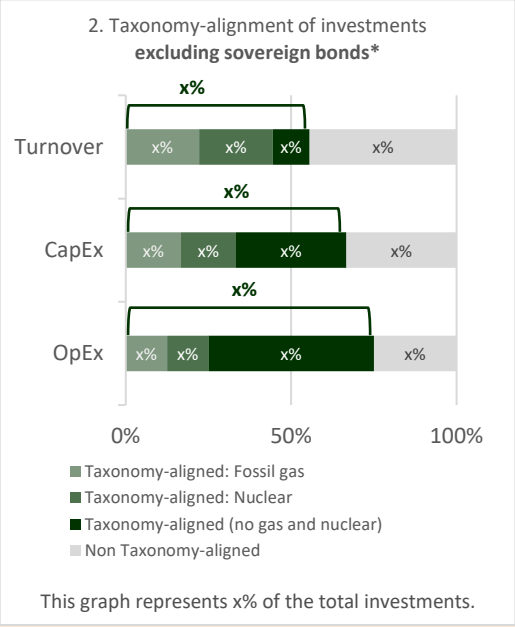
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A - the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

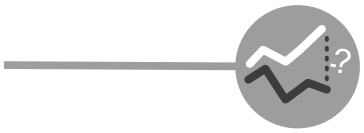
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including financially material environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Equity Megatrends Fund (the "**Portfolio**")
Legal entity identifier: 549300NOKC884YXB6S20

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.6%* of sustainable investments**
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*The Portfolio introduced a minimum sustainable investment commitment of 10% during the last quarter of the Reference Period. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2025 (as the only quarter end following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

Please refer to the "*What was the proportion of sustainability-related investments?*" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found **here.

Unless otherwise stated in the relevant disclosure or as noted above in respect of sustainable investments, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.5	ES: A-D G: 1-4	100%
Third-Party Data	6.1	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially materialenvironmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-

Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: C G: 2.5	5.4	92%
2023 reference period	ES: C G: 2.6	5.6	96%
2024 reference period	ES: C G: 2.5	5.7	100%
2025 reference period	ES: C G 2.5	6.1	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilised multiple data points that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

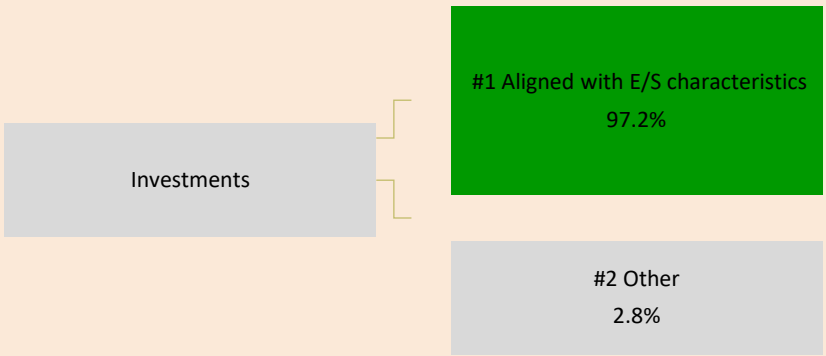
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
ALIBABA GROUP HOLDING-SP ADR	Consumer Discretionary	5.9	HONG KONG
PERRIGO COMPANY PLC	Consumer Staples	5.6	IRELAND
PETS AT HOME GROUP PLC /GBP/	Consumer Discretionary	5.3	UNITED KINGDOM
NICE LTD - SPON ADR	Technology	5.2	ISRAEL
AMDOCS LTD	Technology	5.2	UNITED STATES
DELTA AIR LINES INC	Industrials	4.7	UNITED STATES
CRITEO SA-SPON ADR	Communications	4.6	FRANCE
CORNING INC	Technology	4.5	UNITED STATES
EXPEDIA GROUP INC	Communications	4.5	UNITED STATES
CISCO SYSTEMS INC	Technology	4.5	UNITED STATES
TETRA TECH INC	Industrials	4.4	UNITED STATES
CHARLES RIVER LABORATORIES	Health Care	4.4	UNITED STATES

ZETA GLOBAL HOLDINGS CORP-A	Technology	4.4	UNITED STATES
VISTRA CORP	Utilities	4.3	UNITED STATES
UBER TECHNOLOGIES INC	Communications	4.1	UNITED STATES

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?



What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The Sustainable Investment percentage as of 31 December 2025 was 34.6%, which contained 17.6% sustainable investments with an environmental objective not aligned with the EU Taxonomy, and 17.0% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Technology	29.1
Communications	17.4
Industrials	15.9
Consumer Discretionary	11.2
Health Care	7.7
Materials	5.7

Consumer Staples	5.6
Utilities	4.3
Financials	3.1

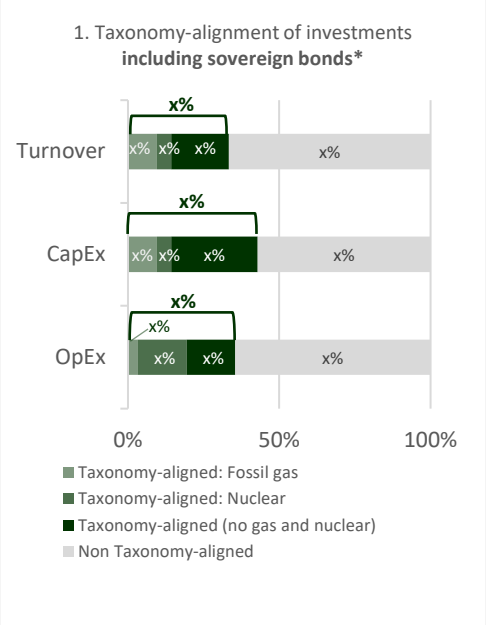
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

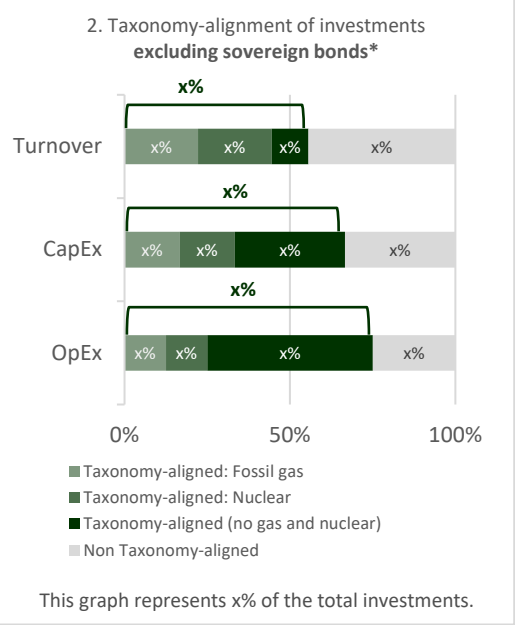
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[12]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[12] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the

Portfolio focused investment in companies that are exposed to global long-term themes.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker..

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Flexible Credit Income Fund (the "**Portfolio**")

Legal entity identifier: 5493004BPE0UFYX6FZ81

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; GHG emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

  The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainable Investment Criteria" section of the Prospectus.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	95%
Third-Party Data	5.9	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for corporate issuers.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

CVaR projected that a warming climate scenario could result in the following loss in the valuation of assets under assessment during the Reference Period.	-10.1%
CVaR coverage during the Reference Period.	29%

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose

activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the EU Climate Transition Benchmark (the "**EU CTB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	62	5.1	93%
2023 reference period	63	5.5	93%
2024 reference period	58	5.5	94%
2025 reference period	58	5.9	95%

2. CVaR

	CVaR	**Coverage**
2022 reference period	-12.9%	48%
2023 reference period	-12.3%	42%
2024 reference period	-13.0%	33%
2025 reference period	-10.1%	29%

3. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

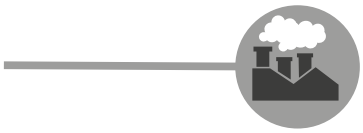
N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	15.4
Securitized	13.0
Consumer Discretionary	12.5
Industrials	11.7
Energy	8.3
Materials	8.2
Communications	7.6
Technology	5.8
Health Care	5.6
Utilities	5.4
Real Estate	2.8
Government	2.0
Consumer Staples	1.7
Fund	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

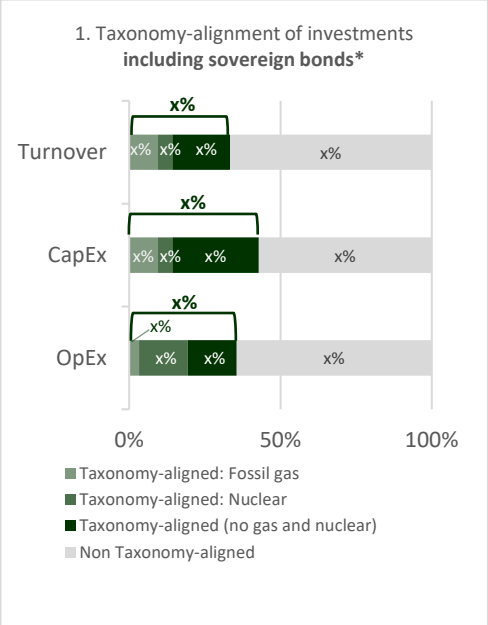
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

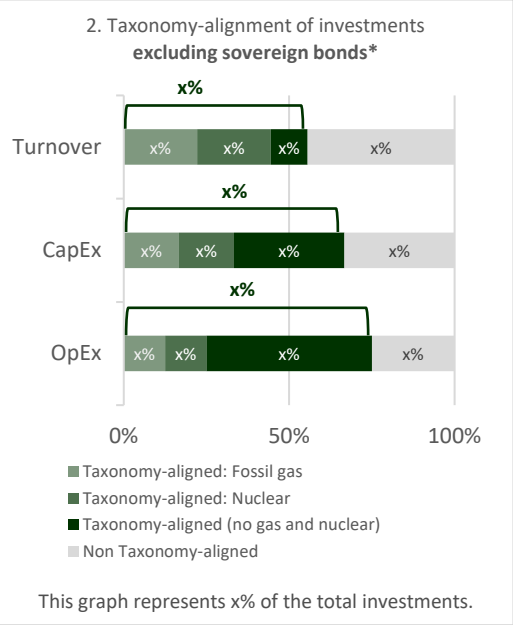
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

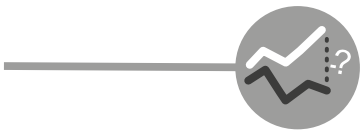
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global High Yield Engagement Fund (the "**Portfolio**")

Legal entity identifier: 549300YE6BLJU5JCDI13

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 20.7% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments)

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted the United Nations Sustainable Development Goals ("**SDGs**") by aiming to engage directly with 100% of the corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer). The Sub-Investment Manager set key performance indicators ("**KPIs**") for corporate issuers that were aligned to the SDGs which related to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs.

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise.

   The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being

addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with 100% of corporate issuers.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	100%
Third-Party Data	6.0	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Engagement reporting:

As mentioned above, the Sub-Investment Manager contributed towards the achievement of the SDGs by aiming to engage with 100% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer).

For the Reference Period engagement took place with 92% of corporate issuers.

Below the Sub-Investment Manager has included a summary of its engagement efforts during the Reference Period.

The Sub-Investment Manager engaged with 339 companies held by the Portfolio during the Reference Period.
40% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).
57% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
14 of the total 17 UN Sustainable Development Goals ("**SDGs**") were covered by the Sub-Investment Manager's engagement objectives.
As at 31 December 2025, companies have either fully achieved or taken partial action towards achieving 20% of engagement objectives.

Further information on the Sub-Investment Manager's engagement efforts can be found in the Portfolio's Engagement Report here.

For further detail please see the Neuberger Berman Stewardship and Engagement Policy here.

3. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

4. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy, the EU Climate Transition Benchmark (the "**EU CTB"**) exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. The NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	**1-100**	**0-10**	**0-100%**
2022 reference period	68	5.6	100%
2023 reference period	58	5.7	100%
2024 reference period	58	5.8	100%

2025 reference period	58	6.0	100%

2. Engagement Reporting

	Companies engaged with	% of the engagements were direct one-to-one engagements (either remotely or in-person)	% of the engagements were with CEO / CFO level staff	Number of SDGs covered (out of 17)	% of companies engaged with that have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective
2022 reference period	207	61%	50%	15	20%
2023 reference period	296	55%	51%	15	26%
2024 reference period	338	46%	57%	15	23%
2025 reference period	339	40%	57%	14	20%

3. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective during the reference period. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the SDGs; and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies

	PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs

Theme	Adverse sustainability indicator
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

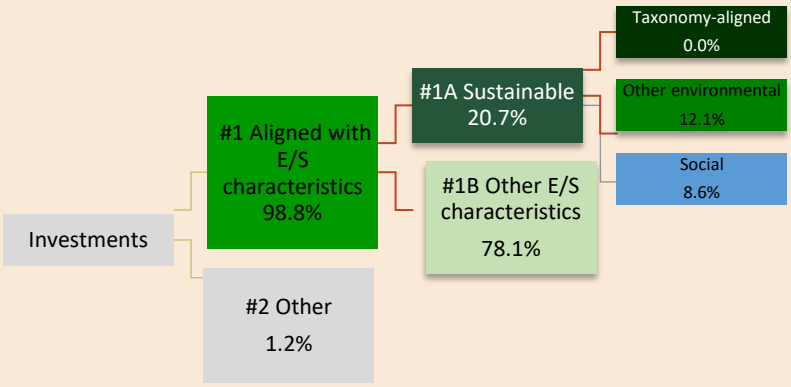
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025.



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Consumer Discretionary	14.3
Industrials	14.3
Communications	12.8
Materials	12.8
Financials	10.6
Energy	10.5
Health Care	6.4
Utilities	5.4
Real Estate	4.6
Consumer Staples	4.5
Technology	3.8

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

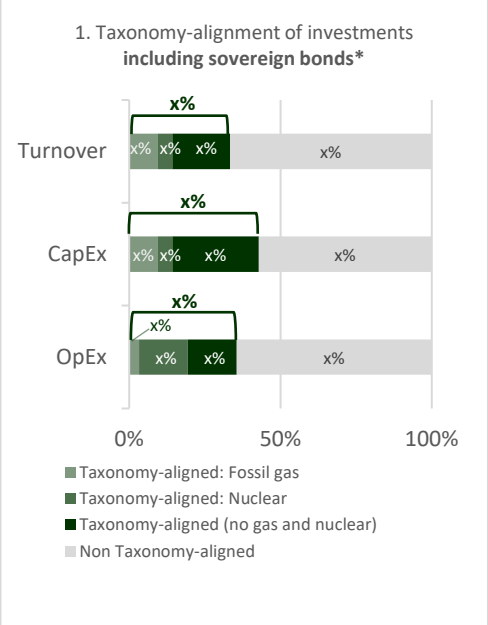
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

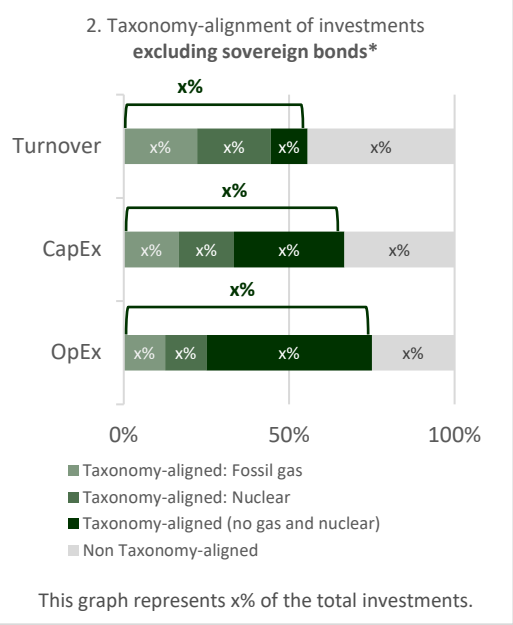
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand financially material environmental, social or governance risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the

direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement Reporting section above for further details).

The Portfolio promoted environmental and social characteristics, whilst contributing towards the achievement of the SDGs by aiming to engage directly with 100% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer), primarily through in-person meetings and calls, setting key KPIs aligned to the SDGs which related to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The investee issuer's progress relative to the KPIs set was evaluated by the Sub-Investment Manager quarterly. This direct engagement with corporate issuers was an essential part of the investment process and the Portfolio's contribution towards the achievement of the SDGs.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement Potential Indicator**"). The Engagement Potential Indicator, on a scale of 1-5, provided an evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of "5". The Sub-Investment Manager did not invest in issuers with an Engagement Potential Indicator rating of below "2". The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Investment Grade Credit Fund (the "**Portfolio**")

Legal entity identifier: 549300TIVE0UW3FSBE51

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.7%* of sustainable investments**
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*The Portfolio introduced a minimum sustainable investment commitment of 10% during the last quarter of the Reference Period. The sustainable investment disclosure in this periodic report template has therefore been prepared based on the Portfolio's holdings as of 31 December 2025 (as the only quarter end following the introduction of the sustainable investment commitment). The sustainable investment figures are not included in the Asset Allocation chart due to the inconsistent reference periods.

**Please refer to the "*What was the proportion of sustainability-related investments?*" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, or as noted above in respect of sustainable investments, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying

environmental and social characteristics (which make up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	62	1-100	
Third-Party Data	6.6	0-10	100%

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-

Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	62	6.7	100%
2023 reference period	61	6.8	100%
2024 reference period	62	6.7	100%
2025 reference period	62	6.6	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the SDGs; and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective.

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas

Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

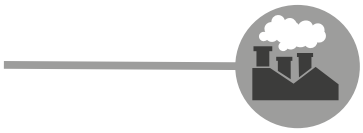
The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors takeninto account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

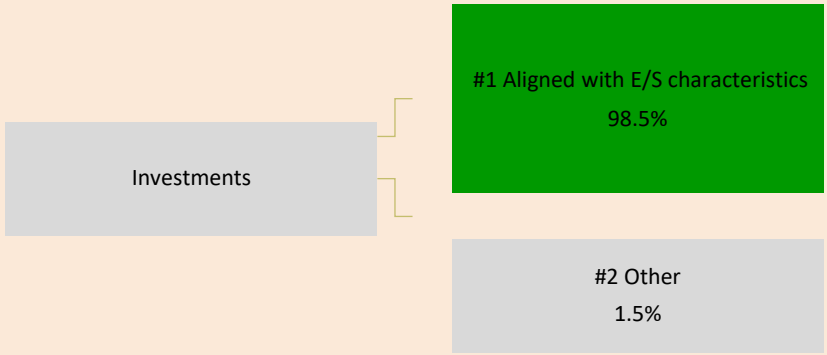
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The Sustainable Investment percentage as of 31 December 2025 was 30.7%, which contained 22.3% sustainable investments with an environmental objective not aligned with the EU Taxonomy, and 8.4% socially sustainable investments. The Portfolio did not commit to holding Taxonomy-aligned investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	33.9
Utilities	12.3
Communications	9.9
Consumer Discretionary	9.5
Real Estate	7.2
Technology	6.3
Health Care	5.8
Energy	4.5
Industrials	4.3
Government	3.5
Materials	1.6
Consumer Staples	1.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each

investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

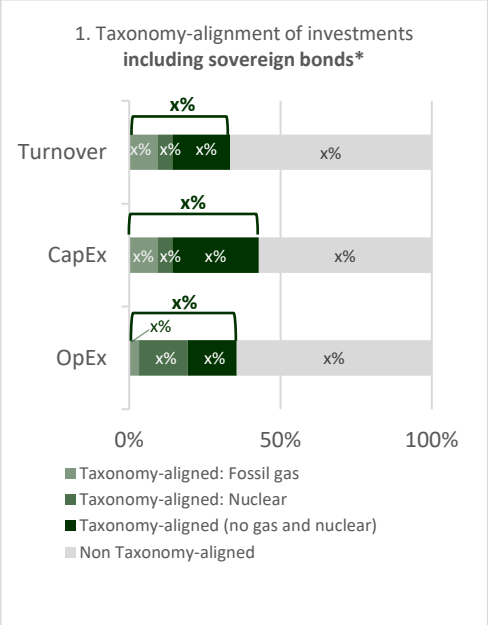
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

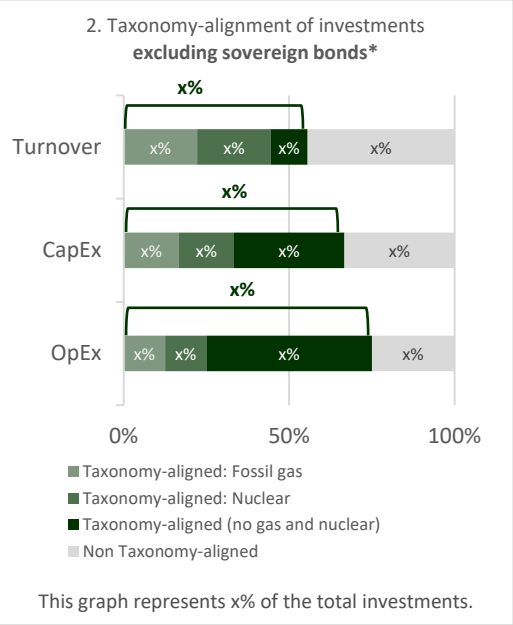
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Opportunistic Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300ZNZZ2YDVTNRE14

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; air quality; waste management; water management; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social, or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	64	1-100	81%*
Third-Party Data	6.2	0-10	

*The Combined Coverage excludes securitised debt exposure (eg CMBS, CMO and MBS). Some securitised debt exposures are considered as investments aligned with the environmental and/or social characteristics promoted by the Portfolio, as reported in the asset allocation chart.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where

possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	61	5.7	80%
2023 reference period	62	6.2	73%
2024 reference period	61	5.9	77%
2024 reference period	64	6.2	81%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;

  Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	44.4
Securitized	17.8
Financials	7.8
Consumer Discretionary	5.9
Communications	5.1
Utilities	4.4
Industrials	3.4
Health Care	3.3
Real Estate	3.1
Materials	1.7
Consumer Staples	1.3
Energy	0.9
Technology	0.9
Fund	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

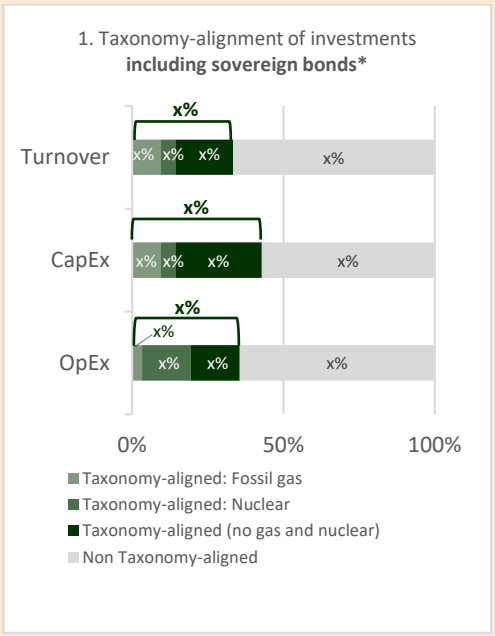
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

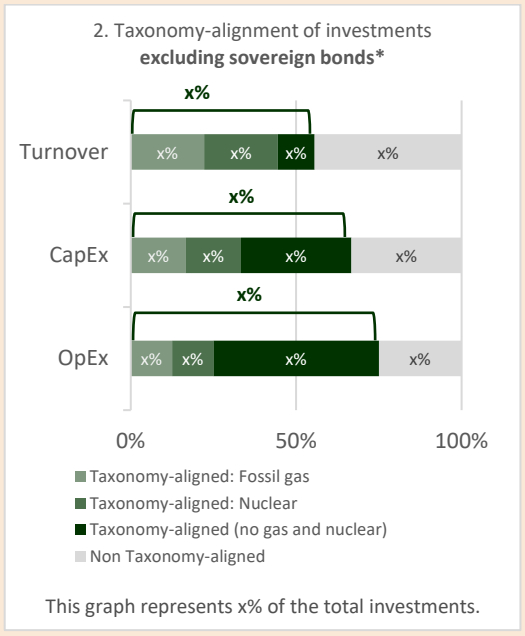
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

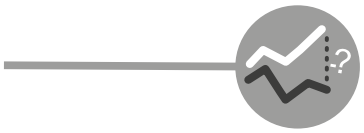
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Value Fund (the "**Portfolio**")

Legal entity identifier: 549300VLTCS1K4EA7H66

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.0%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; GHG emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- ***Social Characteristics***: access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce inclusivity; pricing transparency; and responsible marketing.

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainable Investment Criteria" section of the Prospectus.

Performance in relation to these environmental and social characteristics was measured through the Composite Quotient Rating, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

I. The Composite Quotient Rating:

The above environmental and social characteristics were derived and considered using a blend of environmental and social characteristics derived from a proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") and a theme based ESG rating system ("**NB Material Themes**"), (together the "**Composite Quotient Rating**").

The NB ESG Quotient is built around the concept of sector specific environmental, social and/or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social and/or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social and/or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB Material Themes rating system is built around the concept of sector specific environmental, social and governance themes (provided by third-party data vendors), which were custom weighted and produced an overall NB Material Themes rating for companies. Sector specific NB Material Themes included individual key environmental, social or governance issues/characteristics or aggregated key environmental, social or governance issues/characteristics which in turn form an environmental, social or governance theme. The relevant environmental and social characteristics are listed above and sit within overarching environmental, social or governance themes.

Companies with a favourable and/or an improving Composite Quotient Rating had a higher chance of being included in the Portfolio. Companies with a poor Composite Quotient Rating, especially where a poor Composite Quotient Rating was not being addressed by a company, were more likely to be

removed from the investment universe or divested from the Portfolio. While the Composite ESG Rating of companies was considered as part of the investment process, there is no minimum Composite ESG Rating to be attained by a company prior to investment.

Reference Period	Rating	Range	Combined Coverage
Composite Quotient Rating	0.4	-1 to +1	100%
Third-Party Data	7.2	0-10	

With regards to the Composite Quotient Rating, a rating between -1 and +1 is used where -1 is the lowest rating and +1 is the highest rating.

The average Composite Quotient Rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

II. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the Composite Quotient Rating and direct engagements with the company.

- ***…and compared to previous periods?***

1. Composite Quotient Rating

	Composite Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	-1 to +1	0-10	0-100%
2022 reference period	0.6	7.3	100%
2023 reference period	0.6	7.3	100%
2024 reference period	0.5	7.1	100%
2025 reference period	0.4	7.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as

breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;

- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and

- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

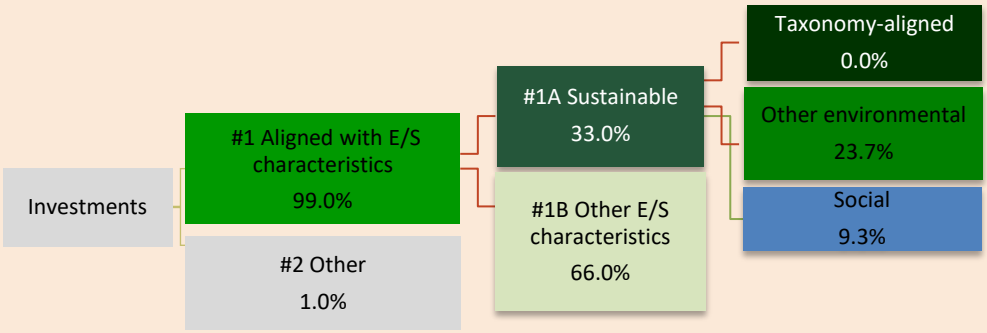
What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025

Largest investments	Sector	% Assets	Country
APPLE INC	Technology	2.9	UNITED STATES
ALPHABET INC-CL A	Communications	2.2	UNITED STATES
CATERPILLAR INC	Industrials	1.9	UNITED STATES
JOHNSON & JOHNSON	Health Care	1.5	UNITED STATES
UNITED RENTALS INC	Industrials	1.5	UNITED STATES
QUALCOMM INC	Technology	1.4	UNITED STATES
HARTFORD INSURANCE GROUP INC	Financials	1.4	UNITED STATES
MICROSOFT CORP	Technology	1.4	UNITED STATES
ALPHABET INC-CL C	Communications	1.4	UNITED STATES
NOVARTIS AG-REG /CHF/	Health Care	1.3	SWITZERLAND
MEDTRONIC PLC	Health Care	1.3	IRELAND
GILEAD SCIENCES INC	Health Care	1.3	UNITED STATES
ABBVIE INC	Health Care	1.3	UNITED STATES
MANULIFE FINANCIAL CORP /CAD/	Financials	1.3	CANADA
AMERICAN EXPRESS CO	Financials	1.2	UNITED STATES



What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	23.3
Technology	16.9
Communications	12.0
Health Care	11.1
Industrials	11.1
Consumer Discretionary	7.1
Energy	5.3
Materials	4.9
Consumer Staples	4.4
Utilities	2.0
Real Estate	1.9

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

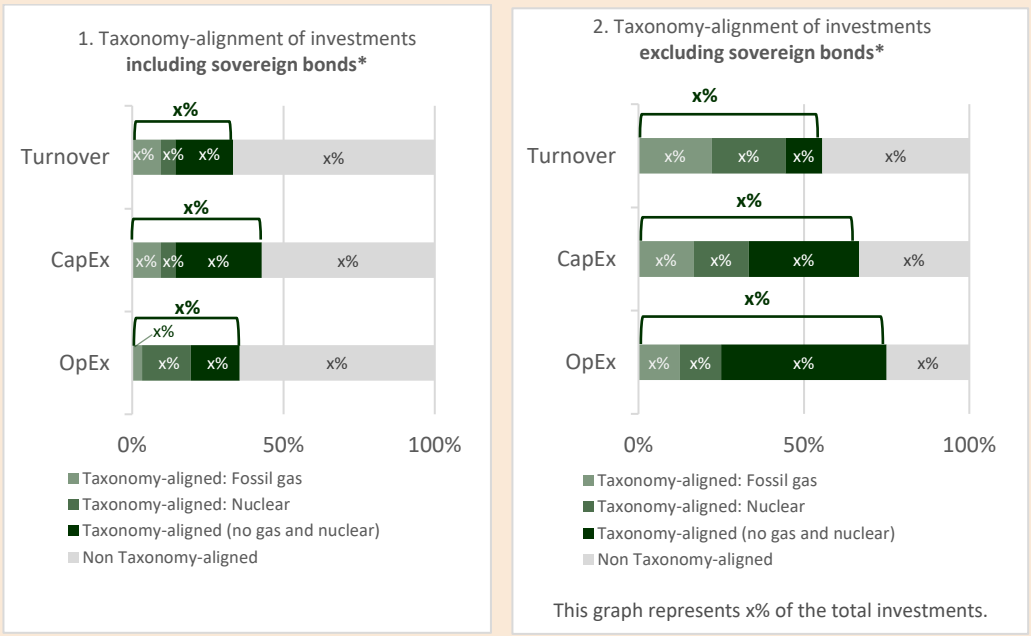
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm whether the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

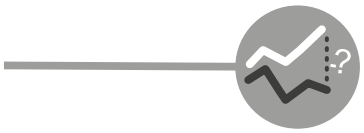
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social and/or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social and/or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social and/or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the Composite Quotient Rating and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The Composite Quotient Rating (as explained above) was used to measure the environmental and social characteristics promoted by the Portfolio. By integrating the investment team's proprietary environmental, social or governance analysis (the Composite Quotient Rating) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager leveraged NB internally led engagement with management teams of companies, this was achieved through a robust engagement program which took place at an NB entity level rather than at a Portfolio level. The Sub-Investment Manager viewed this internally led engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman High Yield Bond Fund (the "**Portfolio**")

Legal entity identifier: 549300IJY8N43QRUU802

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with corporate issuers.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	57	1-100	100%
Third-Party Data	5.5	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	57	5.0	99%
2023 reference period	57	5.3	99%
2024 reference period	58	5.5	100%
2025 reference period	57	5.5	100%

2. Avoidance criteria

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third- party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Consumer Discretionary	16.7
Industrials	13.1
Energy	13.1
Financials	12.3
Materials	12.2
Communications	11.3
Health Care	7.0
Technology	4.8
Utilities	3.4
Real Estate	2.7
Consumer Staples	2.0
Securitized	1.4
Fund	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

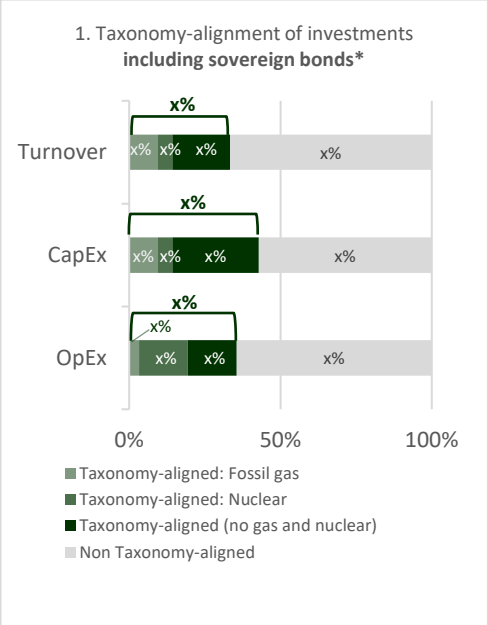
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

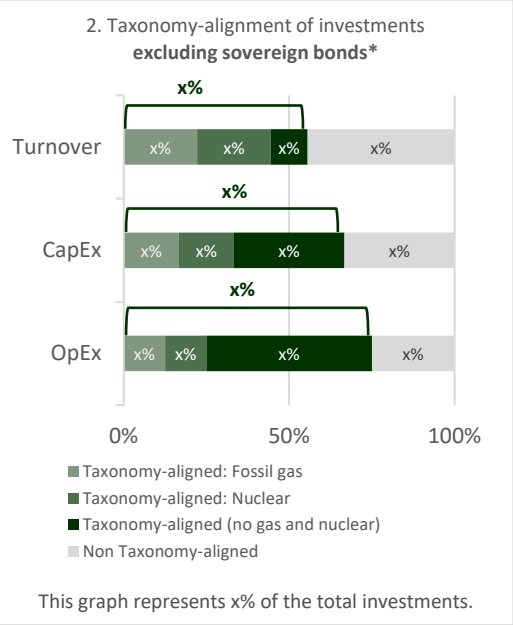
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

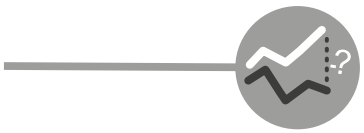
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Japan Equity Engagement Fund (the "**Portfolio**")

Legal entity identifier: 549300ELGQMFUUPHG878

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless stated otherwise in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we also have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- ***Social Characteristics***: access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce inclusivity; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB proprietary ESG score, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB proprietary ESG score:

   As part of the investment process, the Sub-Investment Manager considered a variety of environmental and social characteristics as part of its scoring model. The Sub-Investment Manager applied a Neuberger Berman ("**NB**") proprietary ESG score which was bespoke to the Japanese market. The NB proprietary ESG score also considered engagement potential as key components in its scoring model. The NB proprietary ESG score also considered the environmental and social characteristics identified in the NB materiality matrix, which is based on the Sustainability Accounting Standards Board ("**SASB**") materiality framework. The NB materiality matrix focused on the environmental, social or governance characteristics that were considered to be the most likely to be the material drivers of financially material environmental, social and governance risk and opportunity for each sector.

   Foundational to the NB proprietary ESG score is the proprietary NB materiality matrix. The NB materiality matrix focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

   The NB proprietary ESG score assigned weightings to financially material environmental, social or governance factors for each sector to derive an NB proprietary ESG score for companies held by the Portfolio. Companies with a favourable and/or an improving NB proprietary ESG score receive higher scores, which was a key area of consideration in raising the companies' weight in the Portfolio. Conversely, companies with a poor NB proprietary ESG score, especially where a poor NB proprietary ESG score was not being addressed by a company, were more likely to receive lower scores that could result in reducing the companies' weight in the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with holding companies to support their efforts in addressing key issues the Sub-Investment Manager deemed critical to the company's business fundamentals and long-term growth including material environment and social issues. The success of the Sub-Investment Manager's constructive engagement efforts with

companies will depend on each of the company's receptiveness and responsiveness to such engagement.

Reference Period	Rating	Range	Combined Coverage
NB Proprietary ESG Score	ES: 8.9 G: 8.1	ES: 1-15 G: 1-15	100%
Third-Party Data	5.6	0-10	

With regards to the NB proprietary ESG score, a separate rating between 1 and 15 is given for environmental and social ("**ES**") ratings, and for Governance ("**G**") ratings, where 15 is the highest rating, and 1 is the lowest rating. This Portfolio does not have a minimum NB proprietary ESG score to be attained by a company prior to investment.

The average NB proprietary ESG score is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Climate Transition Benchmark ("**EU CTB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"),

(iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB proprietary ESG score and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB Proprietary ESG Score

	NB Proprietary ESG Score	**Third-party Data Rating**	**Combined Coverage**
Range	ES:1-15 G: 1-15	0-10	0-100%
2022 reference period	ES: 8.1 G: 8.5	5.1	100%
2023 reference period	ES: 7.7 G: 7.7	5.5	98%
2024 reference period	ES: 8.1 G: 7.9	5.6	99%
2025 reference period	ES: 8.9 G: 8.1	5.6	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

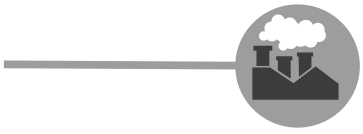
How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Industrials	28.9
Consumer Discretionary	25.7
Technology	9.4

Financials	8.7
Communications	7.4
Real Estate	7.3
Health Care	7.1
Consumer Staples	3.6
Materials	1.9

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

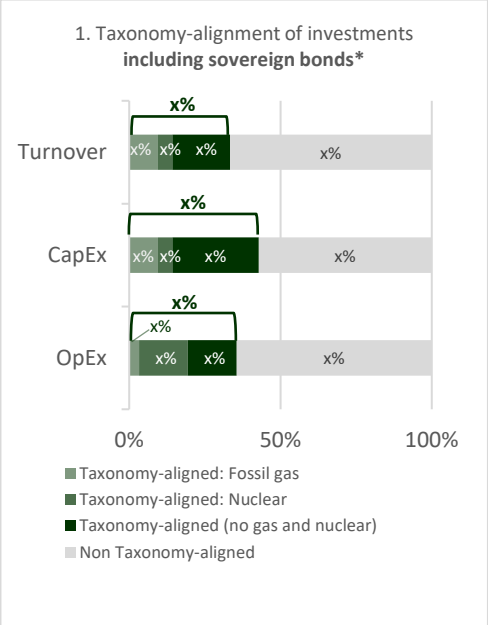
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

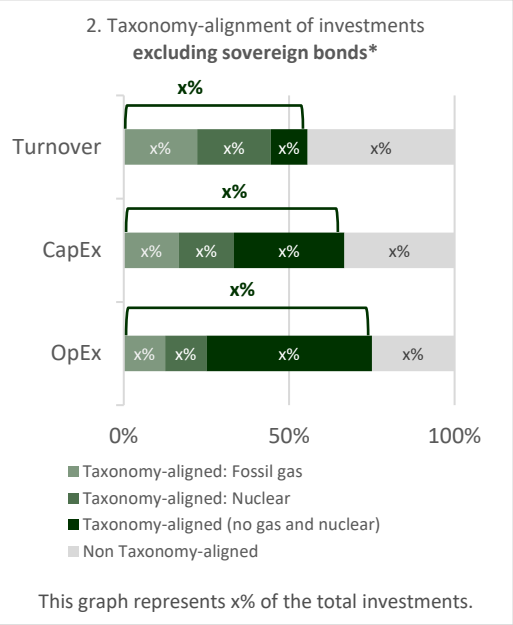
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

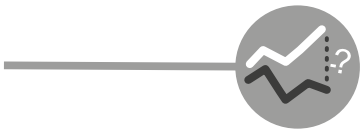
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate), the NB Proprietary ESG score and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

For environment and social responsibility issues, the Sub-Investment Manager took a top-down approach, through the NB proprietary ESG score. The NB proprietary ESG score leveraged the NB materiality matrix to identify the sustainability factors that could have had a material impact on the sustainability of the company. The Sub-Investment Manager then scrutinized these issues with respect to the business model, value chain, growth phase of the company and competitive position to highlight high-priority issues that needed to be addressed immediately. This was done through on-the-ground research combing through years of publicly available company disclosure and through meetings with the company, competitors, suppliers, clients, and external research providers, where available.

II. Engagement:



The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

Once the Portfolio has invested in a company, the Sub-Investment Manager set an engagement objective and a customized strategy to address the financially material issues identified in the scoring process. The Sub-Investment Manager's engagement

with portfolio holdings was aimed at helping these companies achieve long-term growth. As long-term investors focused on bottom-up stock selection, the Sub-Investment Manager believed that through in-depth engagement on capital management, financially material environment and social issues, and corporate governance, they helped the company sustain a growth profile over the long-term that ultimately contributed to the Portfolio's performance. The Sub-Investment Manager's experience engaging with companies has shown that smaller companies require more time and resources to address these issues (average 2-3 years for environmental and social issues). Hence, given this relatively lengthy process, the Sub-Investment Manager adopted a milestone system to ensure engagement remains on track to achieve the objective.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Next Generation Connectivity Fund (the "**Portfolio**")

Legal entity identifier: 549300H0HOXG52ES7840

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 41.1%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   Third-party data and the proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the

aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.2	ES: A-D G: 1-4	100%
Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.7	6.5	100%
2023 reference period	ES: B G: 2.5	6.8	96%
2024 reference period	ES: B G: 2.4	6.8	100%
2025 reference period	ES: B G: 2.2	6.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector

Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social

sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

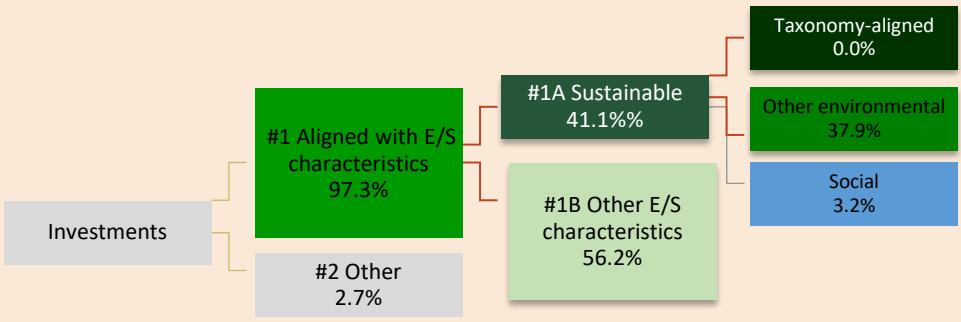
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Technology	59.6
Communications	21.9
Consumer Discretionary	7.7
Financials	5.5
Health Care	2.7
Industrials	2.4
Utilities	0.2

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

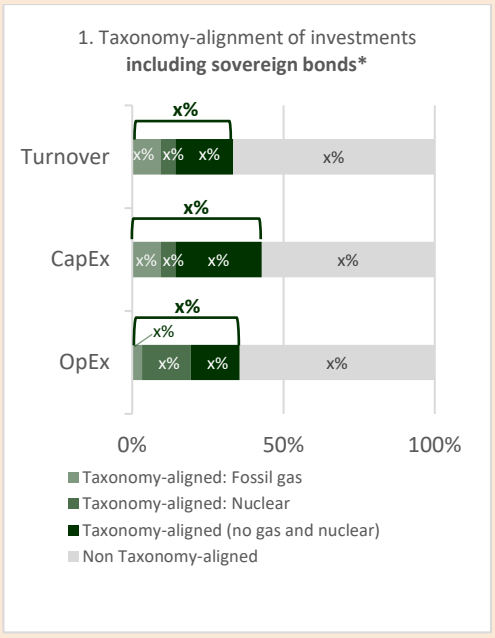
Enabling activities directly enable other activities to make a substantial contribution to an

Taxonomy-aligned activities are expressed as a share of:

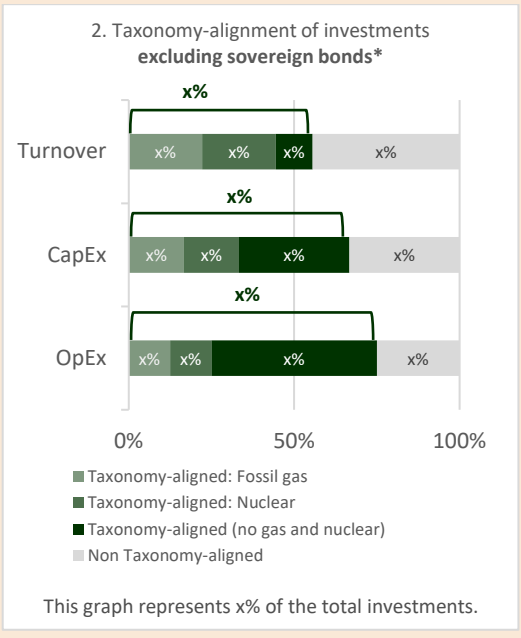
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.



Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

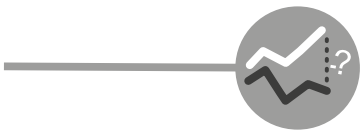
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that offer exposure to the development and enhancement of next generation connectivity.



By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

How did this financial product perform compared with the broad market index?

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Next Generation Mobility Fund (the "**Portfolio**")

Legal entity identifier: 5493000YD3J3W1CMMU74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.9%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"*question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex ") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   Third-party data and the proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.8	ES: A G: 1-4-D	100%
Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company.

The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G:1- 4	0-10	0-100%
2022 reference period	ES: B G: 2.2	6.7	99%
2023 reference period	ES: B G:2.3	7.1	93%
2024 reference period	ES: B G: 2.6	6.9	98%
2025 reference period	ES: B G: 2.8	6.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

i. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.
ii. *The* Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 – GHG emissions PAI 2 – Carbon footprint PAI 3 – GHG intensity of investee companies PAI 4 – Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 – Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 – Board gender diversity PAI 14 – Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
KIA CORP /KRW/	Consumer Discretionary	5.2	KOREA
INFINEON TECHNOLOGIES AG /EUR/	Technology	4.8	GERMANY
NVIDIA CORP	Technology	4.6	UNITED STATES
CONTEMPORARY AMPEREX TEC /CNH/	Consumer Discretionary	4.6	CHINA

AIR LIQUIDE SA /EUR/	Materials	2.6	FRANCE
LINDE PLC	Materials	2.4	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets

Industrials	30.5
Consumer Discretionary	27.5
Technology	25.5
Materials	8.1
Energy	4.5
Communications	3.9

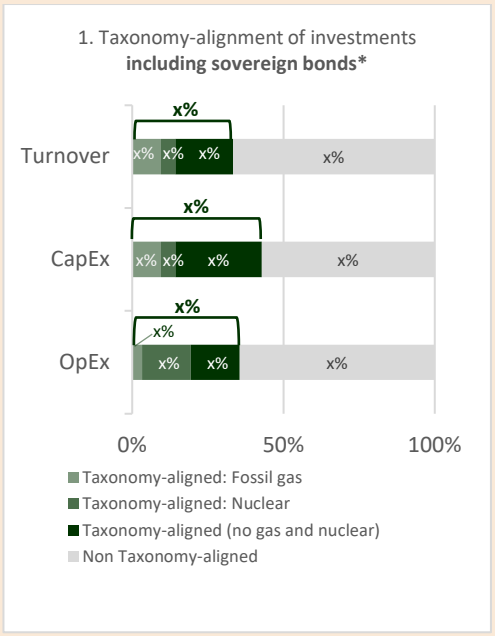
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

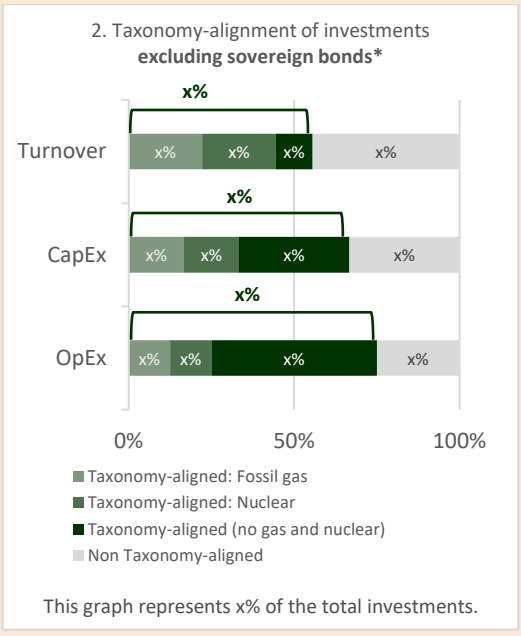
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive the evolution of Next Generation Mobility.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Next Generation Space Economy Fund (the "**Portfolio**")
Legal entity identifier: 549300FT24ZYHNJCVO63

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 16.9%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

  The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainable Investment Criteria" section of the Prospectus.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   Third party data and the proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	**Rating**	**Range**	**Combined Coverage**
NB ESG Quotient	ES: B G: 2.6	ES: A-D G: 1-4	99%
Third-Party Data	6.0	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for companies.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

CVaR projected that a warming climate scenario could result in the following loss in the valuation of assets under assessment during the Reference Period.	-3.9%
CVaR coverage during the Reference Period.	93%

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the other specific exclusions detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.7	6.2	97%
2023 reference period	ES: B G: 2.6	6.5	95%
2024 reference period	ES: B G: 2.6	6.6	99%
2025 reference period	ES: B G: 2.6	6.0	99%

2. CVaR

	CVaR	**Coverage**
2022 reference period	-4.0%	82%
2023 reference period	-7.1%	94%
2024 reference period	-7.9%	91%

2025 reference period	-3.9%	93%

3. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance score to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Companies in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators (the "**PAIs**") outlined in the below table when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and

- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
ROCKET LAB CORP	Industrials	5.3	UNITED STATES
AST SPACEMOBILE INC	Communications	4.5	UNITED STATES
SINGAPORE TECH ENGINEERI /SGD/	Industrials	3.5	SINGAPORE
BAE SYSTEMS PLC /GBP/	Industrials	3.1	UNITED KINGDOM
KRATOS DEFENSE & SECURITY	Industrials	3.1	UNITED STATES
MDA SPACE LTD /CAD/	Industrials	2.9	CANADA
AMPHENOL CORP-CL A	Industrials	2.9	UNITED STATES
MITSUBISHI HEAVY INDUSTR /JPY/	Industrials	2.8	JAPAN
PLANET LABS PBC	Technology	2.8	UNITED STATES
SKY PERFECT JSTAT HOLDINGS INC /JPY/	Communications	2.6	JAPAN
AEROVIRONMENT INC	Industrials	2.5	UNITED STATES
DASSAULT AVIATION SA /EUR/	Industrials	2.4	FRANCE

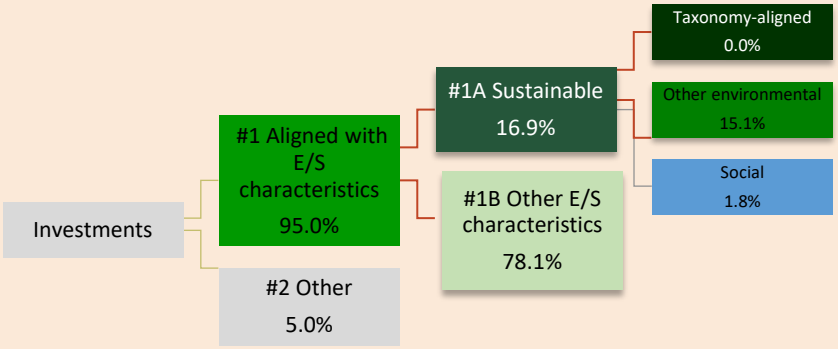
TELEDYNE TECHNOLOGIES INC	Technology	2.3	UNITED STATES
MITSUBISHI ELECTRIC CORP /JPY/	Industrials	2.2	JAPAN

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.



What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Industrials	56.3
Technology	24.2
Communications	11.2
Financials	3.5
Materials	2.4
Consumer Discretionary	2.4

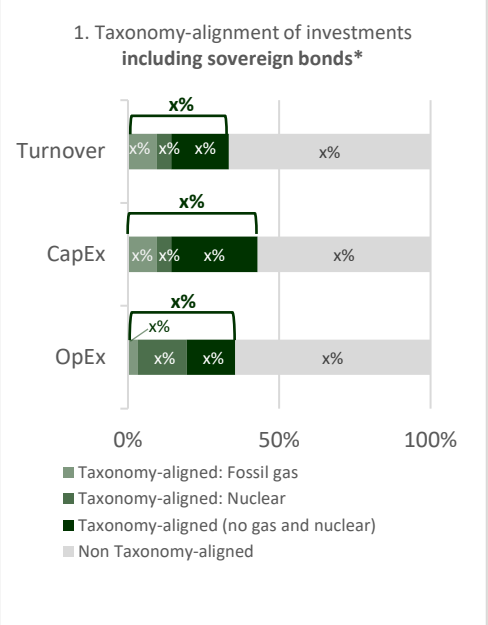
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

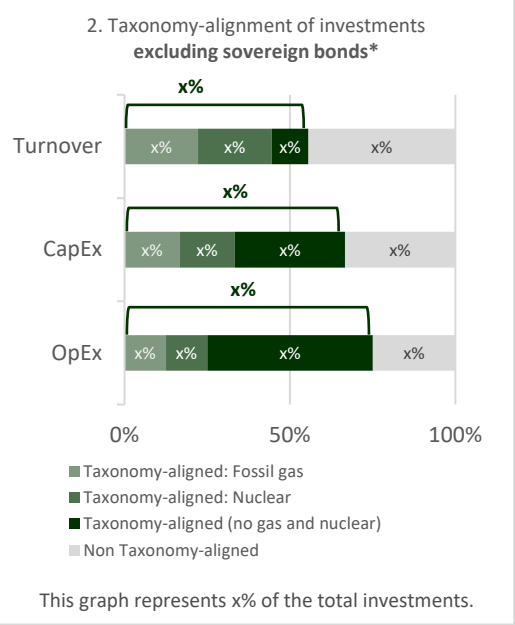
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[12]?

☐ Yes:



☐ In fossil gas ☐ In nuclear energy



☒ No

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

[12] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-

compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Space Economy.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Short Duration Emerging Market Debt Fund (the "**Portfolio**")

Legal entity identifier: 549300J30SXW5866TW70

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.8%* of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the *"What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- ***Environmental Characteristics***: sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("**GHG**") emissions; air and household pollution; and unsafe sanitation.

- ***Social Characteristics***: progress towards UN Sustainable Development Goals ("**SDGs**"); health and education levels; regulatory quality; political stability and freedoms; workforce inclusivity; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- ***Environmental Characteristics:*** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.

- ***Social Characteristics***: health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; workforce inclusivity; community involvement programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   The NB ESG Quotient assigned weightings to environmental, social orgovernance characteristics for countries and for corporate sectors to derive the NB ESG Quotient rating. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	56	1-100	98%
Third-Party Data	4.5	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, the investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage

Range	1-100	0-10	0-100%
2022 reference period	55	4.2	95%
2023 reference period	56	4.5	98%
2024 reference period	56	4.5	99%
2025 reference period	56	4.5	98%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable

data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager and the Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager took into account the principal adverse impacts indicators outlined in Part 1 of the below table for corporate issuers (the "**PAIs**") and the principal adverse impacts for sovereign issuers as outlined in Part 2 of the table below (the "**Sovereign PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

Part 1 – PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs and Sovereign PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in "*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*" above.

2. The Manager and the Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the Sovereign PAIs as outlined below in Part 2 for sovereign issuers when considering the principal adverse impacts on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;

- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and

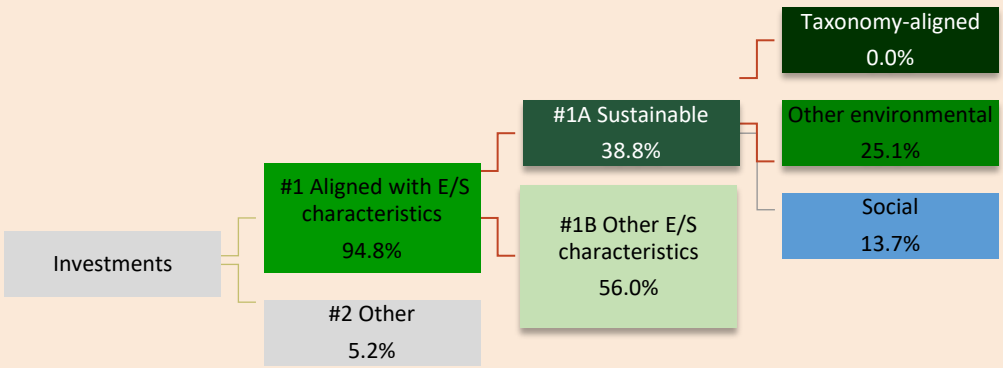
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
REPUBLIC OF PANAMA REGD	Government	2.1	PANAMA
ROMANIA REGD REG S	Government	2.1	ROMANIA

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	37.4
Financials	28.5
Energy	12.9
Materials	6.2
Industrials	4.0
Utilities	3.7
Consumer Discretionary	2.6
Consumer Staples	1.5
Communications	1.3
Real Estate	1.2
Technology	0.5
Health Care	0.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

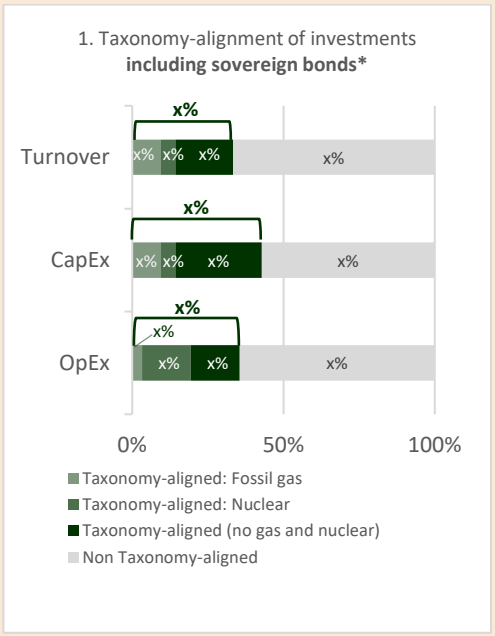
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

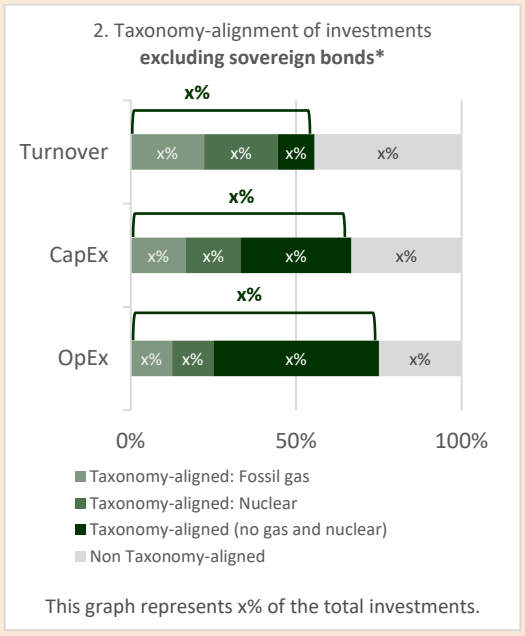
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

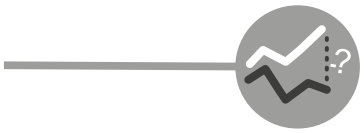
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager and the Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager and the Sub-Investment Manager view the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager and the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager and the Sub-Investment Manager believe that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager and the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio. By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and portfolio construction activities.

II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Short Duration Euro Bond Fund (the "**Portfolio**")

Legal entity identifier: 5493005BLB45DI1FOM10

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ✖ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	✖ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.3% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	✖ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	✖ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments*?" question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; ; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material, environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	64	1-100	95%
Third-Party Data	7.0	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified

as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. The NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	1-100	0-10	0-100%
2022 reference period	62	6.5	87%
2023 reference period	63	6.8	90%
2024 reference period	64	6.9	93%
2025 reference period	64	7.0	95%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the Sustainable Development Goals ("**SDGs**"); and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager took into account the following principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

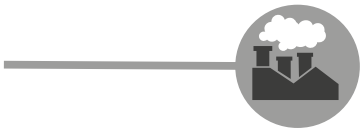
The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Manager's assessment of issuers) throughout the Reference Period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.

2. The Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint

	PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	49.0
Consumer Discretionary	9.6
Government	9.5
Real Estate	9.2
Securitized	8.6
Industrials	3.8
Utilities	3.4
Materials	2.4
Communications	2.1
Consumer Staples	1.0
Health Care	0.6
Energy	0.5
Technology	0.3

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

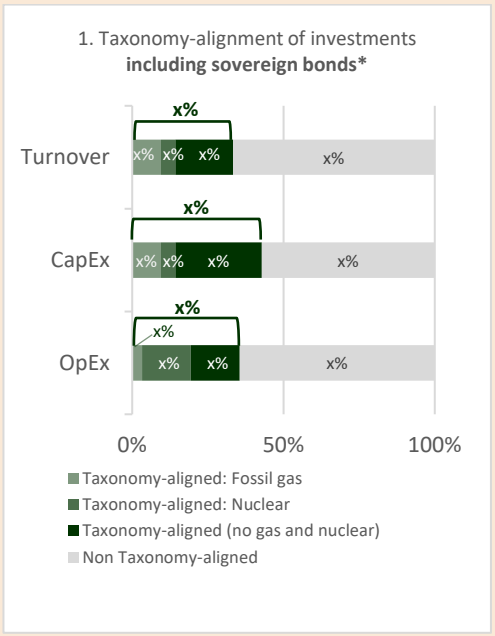
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

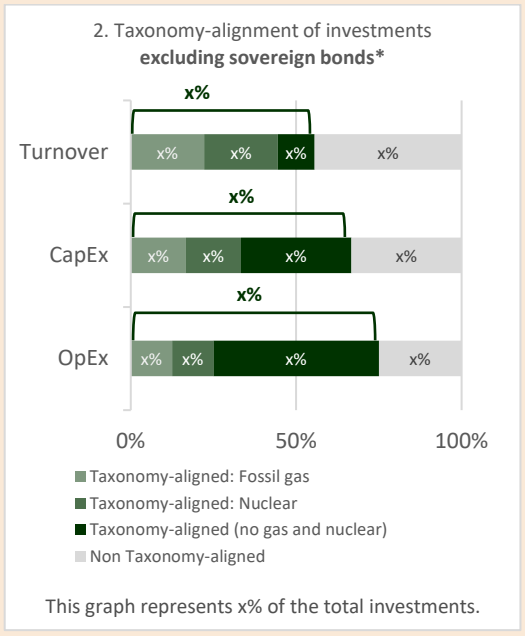
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.

II. Engagement:

The Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Short Duration High Yield Engagement Fund (the "**Portfolio**")

Legal entity identifier: 5493009EN8Z7034TFP15

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 17.1% of sustainable investments*
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

*Please refer to the "*What was the proportion of sustainability-related investments?"* question below for further detail in respect of the Portfolio's asset allocation (including its exposure to sustainable investments).

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio aimed to engage with at least 90% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer). To promote the achievement of the United Nations Sustainable Development Goals ("**SDGs**"), at least 70% of corporate issuer engagement objectives was aligned with the SDGs and the Portfolio engaged with at least 70% of corporate issuers on such objectives.

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; GHG emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks; and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety, quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

  The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "Sustainable Investment Criteria" section of the Prospectus.

For the Reference Period, the Sub-Investment Manager maintained an average ESG score for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG scores from an established external provider. The Portfolio was actively managed, the ICE BofA U.S. High Yield Index was used exclusively for ESG score comparison purposes and carbon intensity reduction comparison purposes only.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment

process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were excluded from the Portfolio.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	58	1-100	100%
Third-Party Data	5.8	0-10	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Engagement reporting:

As mentioned above, the Sub-Investment Manager contributed towards the achievement of the SDGs by engaging with at least 90% of corporate issuers (held for at least 12 months as of 31 December 2025).

In addition, below the Sub-Investment Manager has included a summary of its engagement efforts during the 2025 calendar year.

The Sub-Investment Manager engaged with 149 companies held by the Portfolio in the Reference Period.
46% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).
63% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
13 of the total 17 UN Sustainable Development Goals ("**SDGs**") were covered by the Sub-Investment Manager's engagement objectives.
As at 31 December 2025, companies have either fully achieved or taken partial action towards achieving 21% of engagement objectives.

Further information on the Sub-Investment Manager's engagement efforts can be found in the Portfolio's Engagement Report here.

For further detail please see the Neuberger Berman Stewardship and Engagement Policy here.

3. Climate Value at Risk:

Over the Reference Period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks and opportunities for corporate issuers.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of an issue's or portfolio's market value (i.e. potential gain or loss) according to the warming scenario targeted.

CVaR projected that a warming climate scenario could result in the following loss in the valuation of assets under assessment during the Reference Period.	-10.1%
CVaR coverage during the Reference Period.	48%

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data.

4. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Climate Transition Benchmark (the "**EU CTB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities were identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the

avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. The NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	57	5.3	100%
2023 reference period	57	5.6	100%
2024 reference period	58	5.7	100%
2025 reference period	58	5.8	100%

2. Engagement Reporting

	Companies engaged with	**% of the engagements were direct one-to-one engagements (either remotely or in-person)**	**% of the engagements were with CEO / CFO level staff**	**Number of SDGs covered (out of 17)**	**% of companies engaged with that have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective**
2022 reference period	114	65%	48%	14	16%

2023 reference period	161	54%	51%	15	22%
2024 reference period	174	53%	62%	14	23%
2025 reference period	149	46%	63%	13	21%

3. CVaR

	CVaR	**Coverage**
2022 reference period	-12.4%	60%
2023 reference period	-11.6%	59%
2024 reference period	-10.5%	54%
2025 reference period	-10.1%	48%

4. Avoidance criteria

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment.

The NB sustainable investment framework utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment

Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in three ways:

- Revenue alignment to the EU taxonomy (if any);
- Revenue alignment to the SDGs; and
- Corporate issuers in high impact sectors transitioning to a net-zero pathway based on the NB Net-Zero Alignment Indicator.

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of the NB sustainable investment framework.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

NB applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager took into account the principal adverse impacts indicators outlined in the below table (the "**PAIs**") when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective:

PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water
Waste	PAI 9 - Hazardous waste and radioactive waste ratio

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included taking into account several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were taken into account when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained in *"How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?"* above.
2. The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector

Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage, The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

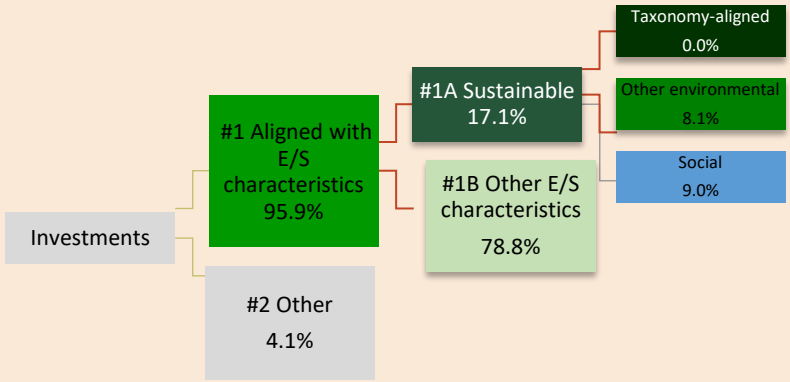
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Industrials	17.4
Consumer Discretionary	15.1
Materials	13.0
Financials	11.7
Communications	10.1
Energy	9.5

Health Care	7.1
Technology	6.1
Real Estate	5.0
Consumer Staples	2.3
Securitized	1.4
Utilities	1.3
Government	0.0*
Fund	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

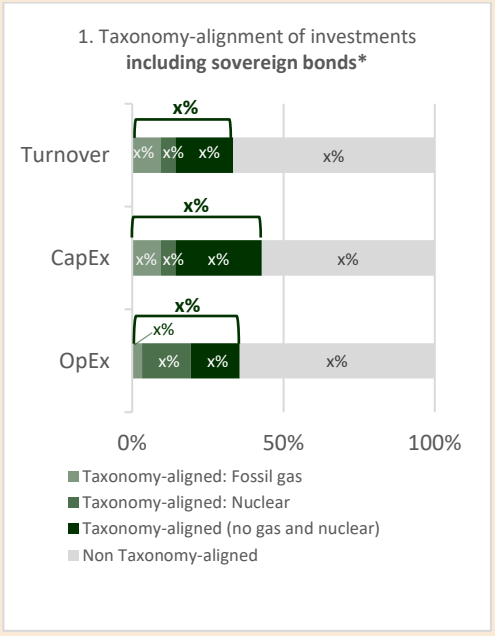
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

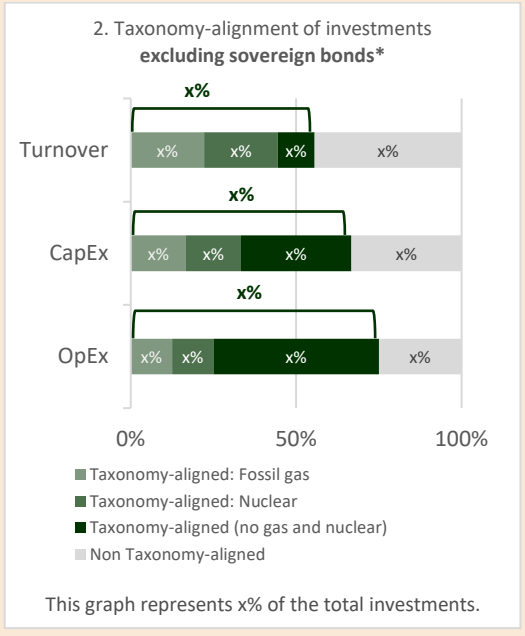
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

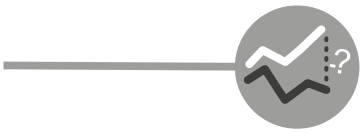
II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand financially material environmental, social or governance risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to

same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement section above for further details).

The Portfolio:



- aimed to engage with at least 90% of corporate issuers (within 12 months of purchasing the securities issued by the corporate issuer). To promote the achievement of the United Nations Sustainable Development Goals ("**SDGs**"), at least 70% of corporate issuer engagement objectives was aligned with the SDGs and the Portfolio engaged with at least 70% of corporate issuers on such objectives.

- Maintained an average ESG score for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG score from an established external provider.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement Potential Indicator**"). The Engagement Potential Indicator, on a scale of 1-5, provided an evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of "5". The Sub-Investment Manager prioritised investments in issuers with an Engagement Potential Indicator rating between "2" and "5". The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the broad market index?***

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Strategic Income Fund (the "**Portfolio**")

Legal entity identifier: 549300RBLDK0PHH13M43

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "**SFDR Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: biodiversity & land use; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; raw materials sourcing; waste management; water management; air quality; product lifecycle management; climate risks and fuel economy.

- ***Social Characteristics***: access to finance; access to healthcare services; business ethics; chemical safety; community relations; controversial sourcing; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety quality & integrity; management of legal & regulatory environment; pricing transparency; workforce inclusivity; and supply chain management.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	63	1-100	54%*
Third-Party Data	5.9	0-10	

*The Combined Coverage excludes securitised debt exposure (eg CMBS, CMO and MBS). Some securitised debt exposures are considered as investments aligned with the environmental and/or social characteristics promoted by the Portfolio, as reported in the asset allocation chart.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	1-100	0-10	0-100%
2022 reference period	72	5.7	66%
2023 reference period	71	6.0	48%
2024 reference period	65	6.2	40%
2025 reference period	63	5.9	54%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in Part 1 of the below table for corporate issuers (the "**Corporate Issuer PAIs**") and considered the principal adverse impacts outlined in Part 2 of the below table for sovereign issuers (the "**Sovereign PAIs**") on sustainability factors (together the "**Product Level PAIs**"):

Part 1 – Corporate Issuer PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1- GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 – Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

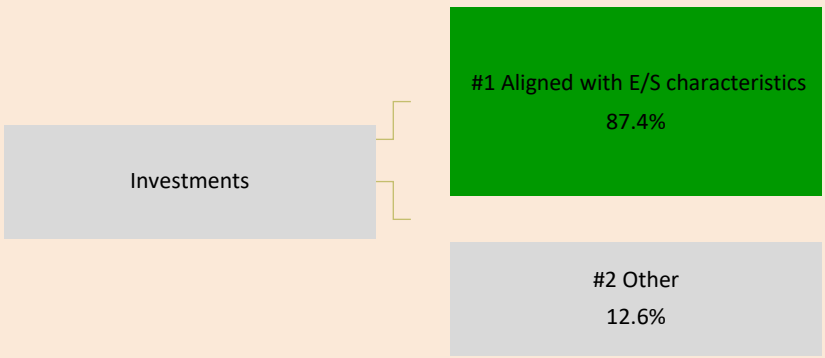
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Securitized	51.2
Government	14.3
Financials	9.3
Communications	3.7
Consumer Discretionary	3.6
Utilities	3.3
Industrials	3.1
Energy	3.0
Health Care	2.2
Materials	2.1
Technology	1.9
Consumer Staples	1.1
Real Estate	1.0
Government-Related	0.1
Municipals	0.1

Fund	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

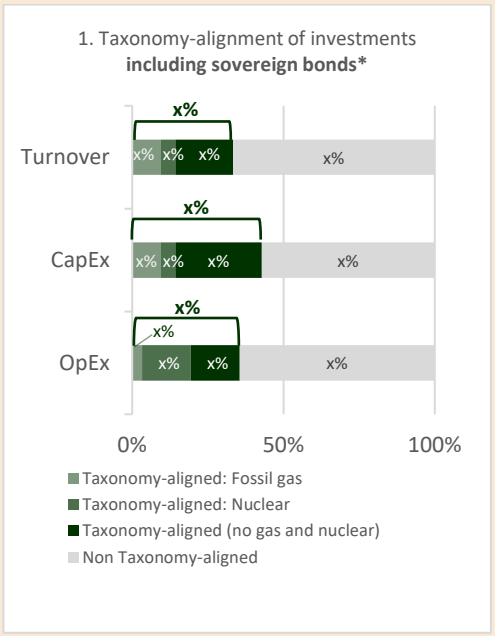
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

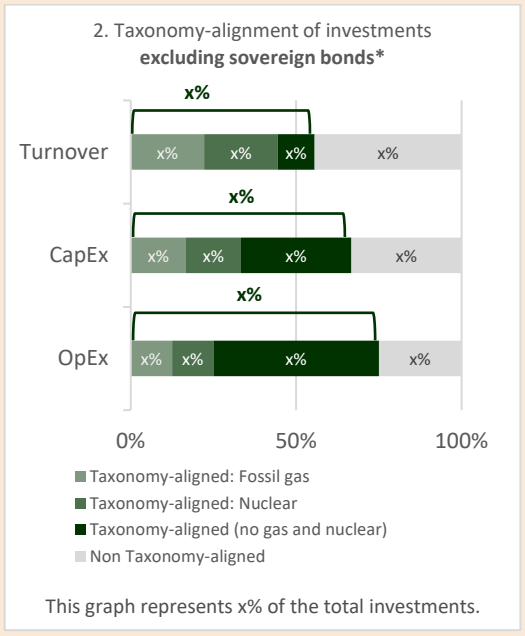
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

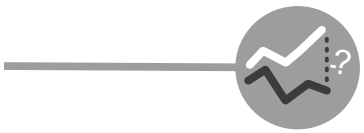
I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the Portfolio's portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Sustainable Emerging Market Debt – Hard Currency Fund (the "**Portfolio**")

Legal entity identifier: 549300OWRIKGBWGY0X93

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☒ It made **sustainable investments with an environmental objective: 57.5%**	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective: 38.3%**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

To what extent was the sustainable investment objective of this financial product met?

The Portfolio invested in securities issued by those issuers that contributed to environmental and social objectives. Issuers were assessed against the sustainable investment objective by reference to the parameters outlined below.

Environmental Objective

The Sub-Investment Manager targeted investment in issuers which demonstrated better income-adjusted advancement in climate change adaptation and mitigation, reducing greenhouse gas ("**GHG**") emissions, ecosystem vitality and net-zero alignment.

Sovereign issuer objectives:

Countries in the top 25th percentile or improving in the next 25th percentile in the sovereign climate transition risk indicator (which is proprietary to the Sub-Investment Manager and combines data focused on climate risk mitigation, climate adaptation, ecosystem vitality, GHG emissions and net-zero alignment) were considered to be aligned to the environmental objective.

Net-zero commitments and targets were set in the expectation that governments followed through on their own commitments to ensure that the objectives of the Paris Agreement were met, including increasing the ambition of their Nationally Determined Contributions ("**NDCs**").

Corporate issuer objectives:

The Portfolio is aiming to align with a net-zero goal, as further described in the SFDR Annex and in the "*Sustainable Investment Criteria*" section of the Prospectus.

Social Objective

The Sub-Investment Manager targeted investment in issuers which demonstrated better income-adjusted progress in achieving the UN Sustainable Development Goals ("**SDGs**"), with a particular focus on public health and education.

Countries in the top 25th percentile or improving in the next 25th percentile in the sovereign sustainable development indicator (which is proprietary to the Sub-Investment Manager and combines data focused on life expectancy, access to vaccination and medical professionals, secondary education and lower income inequality) were considered to be aligned to the social objective.

The Portfolio met its sustainable investment objective. Performance in relation to the sustainable investment objective was measured through the sustainability indicators and is reported, in aggregrate, below.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the attainment of the sustainable investment objectives of the Portfolio. These sustainability indicators are listed below:

i. Independent third-party reports and assessments:

The Sub-Investment Manager used the following third party reports, indexes and assessments to measure the Portfolio's progress towards achieving its sustainable investment objectives:

Advancement in UN Sustainable Development Goals, with emphasis on climate change adaptation and mitigation:

- Notre Dame Global Adaptation Initiative Country Index ("**ND-GAIN**")

The Sub-Investment Manager used the ND-GAIN index to measure and assess a country's vulnerability to climate change and climate transition risks.

The Sub-Investment Manager focused its assessment on income-adjusted climate change adaptation.

- GHG Sovereign Emissions:

The Sub-Investment Manager tracked sovereign GHG Territorial Emissions defined as tons of CO2 emissions of Purchasing Power Parity ("**PPP**")-adjusted GDP (Territorial Production Emissions) or per Capita (Territorial Consumption Emissions). Issuers with the highest Territorial Production Emissions – defined as top quartile and increasing – were excluded from the Portfolio.

- Environmental Performance Index

The Sub-Investment Manager tracked income-adjusted ecosystem vitality data from the Environmental Performance Index, a joint project of the Yale Center for Environmental Law & Policy and The Center for International Earth Science Information Network ("**CIESIN**") at Columbia University's Earth Institute. The indicator measured how well countries are preserving, protecting, and enhancing ecosystems and the services they provide. It is made up of six issue categories: Biodiversity & Habitat, Ecosystem Services, Fisheries, Acid Rain, Agriculture, and Water Resources.

- Net-Zero Alignment - GermanWatch's Climate Change Performance Index ("**CCPI**") and Climate Action Tracker

The Sub-Investment Manager tracked sovereign bonds issuing country's net-zero alignment according to CCPI and the Climate Action Tracker's measurement of national and global efforts towards mitigating global warming. This allowed the Sub-Investment Manager to target countries with Net-Zero commitments by 2050 or earlier.

Advancement in UN Sustainable Development Goals, with emphasis on public health, secondary education and tackling income inequality:

- Sustainable Development Report Index

The Sub-Investment Manager used the Bertelsmann Stiftung and the Sustainable Development Solutions Network Sustainable Development Report Index to assess country performance on the SDGs. This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving the SDGs. Countries that meet the environmental or social goals also need to be in the top 75th percentile of the Sustainable Development Report Index to be considered sustainable.

- UNDP Human Development Index

The Sub-Investment Manager used the UNDP Human Development Index to measure achievements in key dimensions of life expectancy, education and income inequality globally, adjusted for income. This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving human development.

- World Health Organisation – The Global Health Observatory

The Sub-Investment Manager used income-adjusted Global Health Observatory data on vaccination coverage (diphtheria tetanus toxoid) and pertussis ("**DTP3**") immunisation coverage among 1-year-olds, and the number of medical doctors per capita.

<u>Top Performers or Top Improvers held by the Portfolio</u>

The above listed independent third-party reports and assessments were aggregated to identify "Top Performers" (countries in the top 25th percentile which were aligned with the Portfolio's environmental and/or social objectives) or "Top Improvers" (countries improving in the next 25th percentile which

were aligned and are aligning further towards the Portfolio's sovereign environmental and/or social objectives).

Only emerging market sovereign issuers which met the Portfolio's sovereign environmental and/or social objectives, and which were classified as a Top Performer or Top Improver were held by the Portfolio.The classification of countries as a Top Performer or Top Improver is indicative of the Portfolio meeting its sovereign environmental and social objectives.

ii. Avoidance criteria and involvement policies:

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio did not invest in securities issued by issuers whose activities were identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; the EU Paris-Aligned Benchmark ("**EU PAB**") exclusions provided for under the Neuberger Berman EU Climate Benchmark Standard Exclusions Policy and the other specific exclusions detailed in the SFDR Annex of the Portfolio.

Furthermore, the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

i. **Independent third-party reports and assessments**

During the Reference Period the following notable changes from the previous reference period occurred:

Reference Period	Additional countries considered socially sustainable in the sovereign issuer universe	Additional countries considered environmentally sustainable in the sovereign issuer universe	Countries no longer considered environmentally or socially sustainable in the sovereign issuer universe
2023*	13	11	15
2024	2	1	1
2025	13	7	12

*For ease of comparison, the figures for the 2023 reference period have been updated for consistency with the current methodology used to produce this table (including the use of classification changes identified in the underlying data).

The above table reflects movements across the sovereign issuer universe and may include sovereigns not held by the Portfolio.Noting that the “Not Sustainable” section of the Portfolio was only permitted to contain investments that the Sub-Investment Manager felt were necessary for the proper functioning of the Portfolio (such as ensuring adequate liquidity, hedging and collateral cover). If a country was no longer considered as a socially sustainable investment but it was considered as an environmentally sustainable investment or vice versa, the Portfolio could continue to hold that country as it would still be recognised as a sustainable investment.

ii. Avoidance criteria

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Sub-Investment Manager applied its sustainable investment framework, which aims to identify and exclude investments that cause significant harm to environmental or social objectives. To determine whether an investment would cause significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective. In respect of sovereign issuers (which made up the majority of the Portfolio) these are detailed in the first section of the table below ("**Sovereign PAIs**") and those in respect of corporate issuers ("**Corporate Issuer PAIs**") in the second section (together the "**PAIs**"):

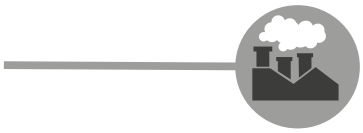
PAIs	
Theme	**Adverse sustainability indicator**
Part 1 - Corporate Issuer PAIs	
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector PAI 5 - Share of non-renewable energy consumption and production PAI 6 - Energy consumption intensity per high impact climate sector
Biodiversity	PAI 7 - Activities negatively affecting biodiversity-sensitive areas
Water	PAI 8 - Emissions to water

Waste	PAI 9 - Hazardous waste and radioactive waste ratio
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises PAI 12 - Unadjusted gender pay gap PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
Part 2 - Sovereign PAIs	
Environmental	PAI 15 - GHG intensity of investee countries
Social	PAI 16 - Investee countries subject to social violations

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards and did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

How were the indicators for adverse impacts on sustainability factors taken into account?



Consideration of the PAIs by the Sub-Investment Manager, when determining that the Portfolio's sustainable investments did not cause significant harm to any environmental or social sustainable investment objective was through a combination of:

- Monitoring issuers, in particular where they fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies detailed above, which included taking into account several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC

Principles, ILO Standards and UNGPs, identified through the Neuberger Berman Global Standards Policy.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the impacts of the PAIs on sustainability factors.

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

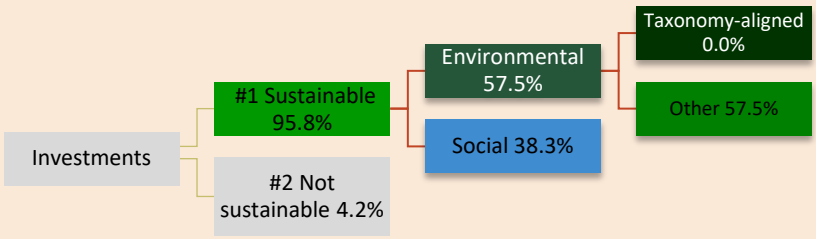
With respect to the Portfolio, consideration of the PAIs by the Sub-Investment Manager, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAI by the Sub-Investment Manager;
- Setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies detailed above, which included consideration of several of the PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments. As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025



Largest investments	Sector	% Assets	Country
FED REPUBLIC OF BRAZIL REGD	Government	2.7	BRAZIL
REPUBLIC OF COLOMBIA REGD	Government	2.6	COLOMBIA

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

The asset allocation of the Portfolio during the Reference Period is detailed in the chart above. The calculation was based on a mark-to-market assessment of the Portfolio and may be based on incomplete or inaccurate issuer or third party data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Government	88.1
Financials	4.6
Communications	3.0
Materials	2.9
Utilities	0.8
Industrials	0.6
Health Care	0.0*

**This sector exposure shows as 0.0% because of rounding.*

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

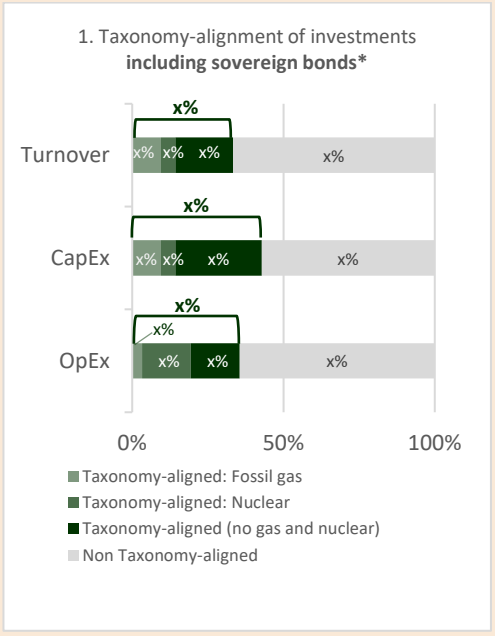
The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

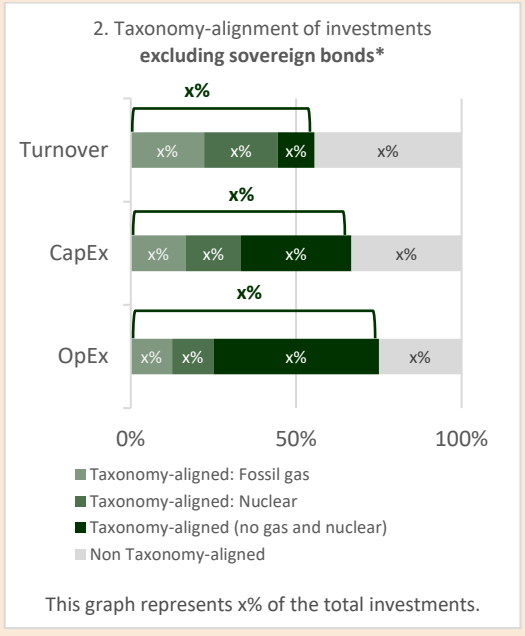
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?



☐ Yes:



☐ In fossil gas ☐ In nuclear energy

☒ No

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What was the share of socially sustainable investments?

This is outlined in the asset allocation chart under the question "What was the asset allocation?" above.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

“Not Sustainable” included the remaining investments of the Portfolio which did not qualify as sustainable investments.

The “Not Sustainable” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt were necessary for the proper functioning of the Portfolio such as ensuring adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its sustainable investment objective.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Portfolio was managed in-line with the sustainable investment objective and the following actions were taken:

i. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager viewed the integration of environmental, social or goverance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considered financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the sustainable objective of the Portfolio using (as appropriate) independent third-party reports and assessments, the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies).

The sovereign sustainable development indicator, which is proprietary to the Sub-Investment Manager, assessed sovereign issuers' advancement of climate change adaptation and mitigation, reducing GHG emissions and net-zero alignment, and in achieving the SDGs, with a particular focus on public health and education.

The Sub-Investment Manager also conducted ongoing analysis of financially material environmental, social or governance factors by generating and utilising NB ESG Quotient ratings for issuers to help to better identify risks and opportunities in the overall credit and value assessment. The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including financially material environmental, social or governance risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings could be increased or decreased based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

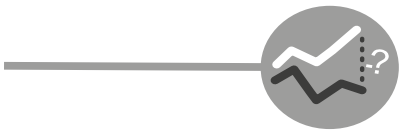
By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of the Portfolio's sustainable investment objective and the Portfolio's portfolio construction activities.

Issuers with a favourable NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where these were not being addressed by that issuer, were not included in the Portfolio.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	54	1-100	99%
Third-Party Data	4.4	0-10	

With regards to the NB ESG Quotient, a rating between 1 – 100 is used where 1 is lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most financially material drivers of environmental, social and goverance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of the sustainable investment objective, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks.The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.



The Sub-Investment Manager did not invest in sovereign issuers which were identified by the Sub-Investment Manager as having weak sustainability practices as further detailed in the SFDR Annex.

ii. Engagement:

The Sub-Investment Manager engaged with issuers through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including sustainability-related topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

iii. Avoidance criteria and involvement policies:

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference sustainable benchmark?

N/A - The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did this financial product perform compared with the broad market index?

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Equity Fund (the "**Portfolio**")

Legal entity identifier: 549300GF328Y6TQJI517

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager continues to monitor companies with a sub-par or poor NB ESG Quotient or third-party rating to understand how they are mitigating/improving upon said environmental, social or governance concerns.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.1	ES: A-D G: 1-4	100%
Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.2	6.6	100%
2023 reference period	ES: B G: 2.1	6.6	97%
2024 reference period	ES: B G: 2.3	6.5	100%
2025 reference period	ES: B G: 2.1	6.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

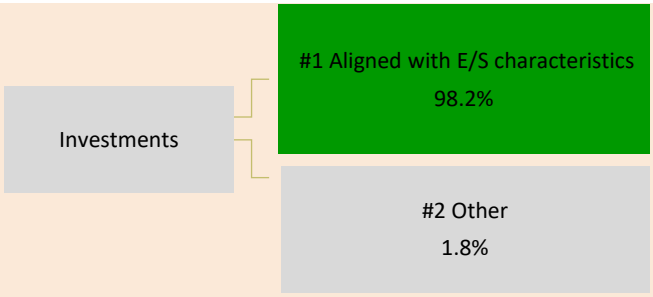
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 20245

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
MICROSOFT CORP	Technology	9.0	UNITED STATES
NVIDIA CORP	Technology	8.2	UNITED STATES

BOSTON SCIENTIFIC CORP	Health Care	1.8	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Technology	38.8
Communications	16.9
Consumer Discretionary	14.6
Financials	10.5
Industrials	7.5
Health Care	6.1
Consumer Staples	3.1
Utilities	1.7
Energy	0.6
Materials	0.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

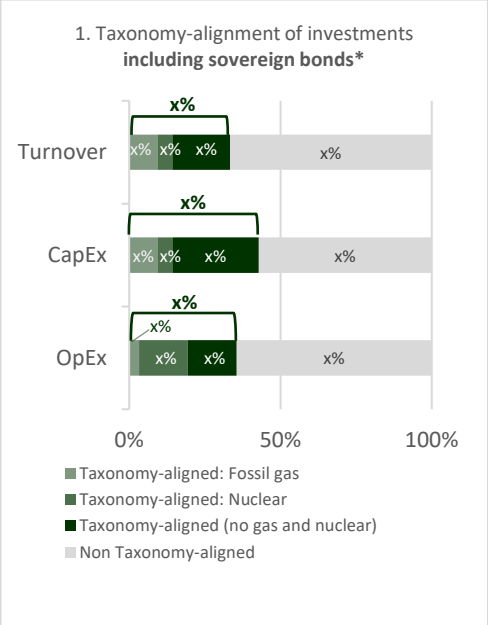
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

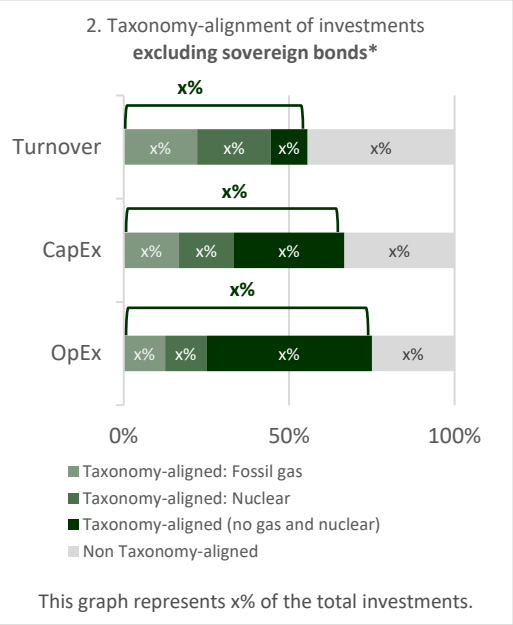
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

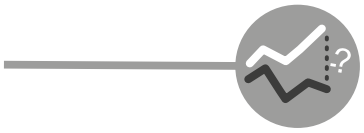
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Large Cap Value Fund (the "**Portfolio**")

Legal entity identifier: 549300J88053TDGDPM52

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") , is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.0	ES: A-D G: 1-4	100%

Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their

research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

- ***…and compared to previous periods?***

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.0	6.8	100%
2023 reference period	ES: B G: 2.2	6.6	95%
2024 reference period	ES: B G: 2.0	6.5	100%
2025 reference period	ES: B G: 2.0	6.2	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

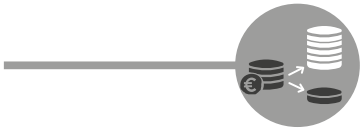
The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?



The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs by the Sub-Investment Manager was through the application of the avoidance criteria and involvement policies referenced above:

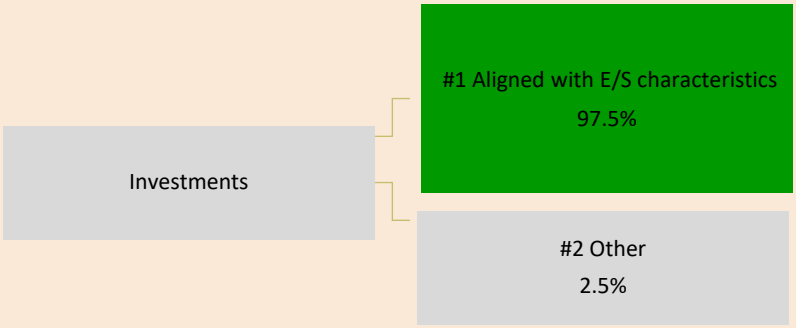
- This excluded issuers identified as being in violation of the UNGP or OECD Guidelines (PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises).
- Additionally, issuers identified as having corporate involvement in the end manufacture or manufacture of intended use components of controversial weapons (including anti-personnel mines, cluster munitions, chemical weapons and biological weapons) were also excluded (PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 – 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
EXXON MOBIL CORP	Energy	4.5	UNITED STATES

CAPITAL ONE FINANCIAL CORP	Financials	2.0	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	21.4
Health Care	16.6
Energy	11.7

Materials	11.6
Industrials	11.4
Consumer Staples	7.2
Technology	6.0
Utilities	5.2
Consumer Discretionary	4.3
Communications	3.5
Real Estate	1.1

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

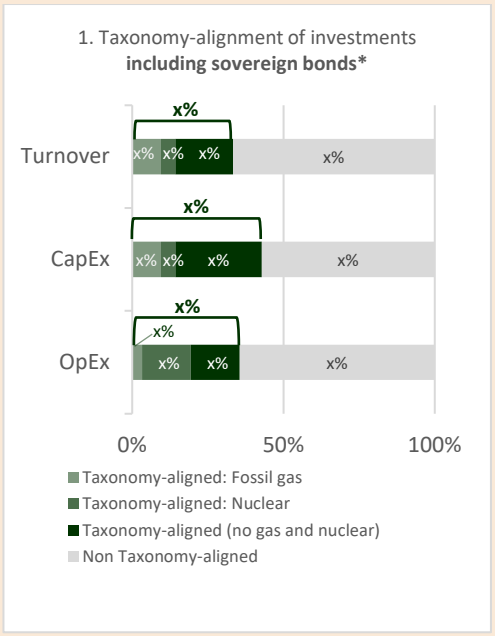
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

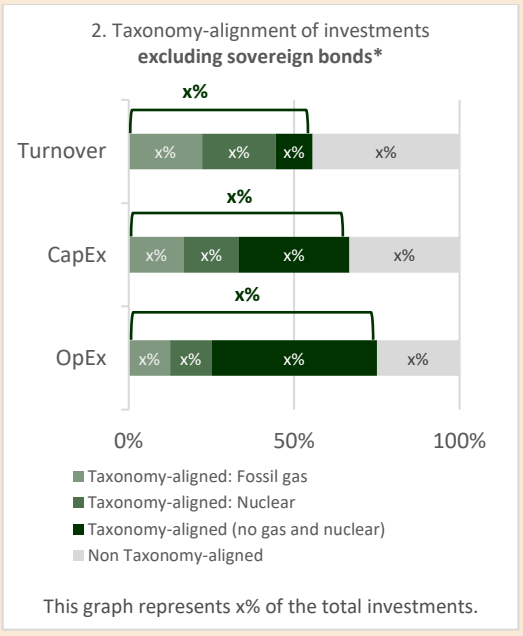
- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:



☐ In fossil gas ☐ In nuclear energy



☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- ***What was the share of investments made in transitional and enabling activities?***

  N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Long Short Equity Fund (the"**Portfolio**")

Legal entity identifier: 54930034RCIO16VO2Z23

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management, controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   This promotion of environmental and social characteristics was applied to the long side of the Portfolio which takes a multi-year time horizon. The Sub-Investment Manager's short positions are expressed through derivatives and therefore did not commit to taking financially material environmental, social or governance factors into consideration. The anticipated long / short allocation of the Portfolio is detailed in the section of the Supplement entitled "*Investment Approach*".

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the long investment universe or divested from long side of the Portfolio. In addition, the Sub-Investment Manager sought to prioritise

constructive engagements with companies that had a poor NB ESG Quotient or third-party rating, in order to assess whether concerns were being addressed adequately.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.0	ES: A-D G: 1-4	99%
Third-Party Data	6.2	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.
As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

Only long positions were covered by the above listed NB avoidance criteria and involvement policies.

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 2.2	6.5	98%
2023 reference period	ES: B G: 2.2	6.3	81%
2024 reference period	ES: B G: 2.2	6.4	98%
2025 reference period	ES: B G: 2.0	6.2	99%

Given the Portfolio's exposure to short positions (which are not considered as investments that are aligned with the environmental or social characteristics promoted by the Portfolio), it may be challenging to maintain a high-level of Combined Coverage across the Portfolio. The environmental, social or governance analysis is performed internally, with the support of third-party data, and is not outsourced. The Sub-Investment Manager makes assessments on these environmental, social or governance characteristics on a continuous basis. For a short period of time, at the point of investment, a company may not be assigned an NB ESG Quotient rating. The Sub-Investment Manager has periodic engagements with third-party ESG data vendors to discuss issues such as data coverage and will evaluate options to help resolve data gaps. Subscription to multiple third-party ESG data vendors enables the Sub-Investment Manager to evaluate third party data coverage and quality of data between third-party ESG vendors. In addition, the Sub-Investment Manager continues to explore new third-party ESG data products and vendors to evaluate potential enhancements to our existing third-party ESG data coverage.

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs by the Sub-Investment Manager was through the application of the avoidance criteria and involvement policies referenced above:

- This excluded issuers identified as being in violation of the UNGP or OECD Guidelines (PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises).
- Additionally, issuers identified as having corporate involvement in the end manufacture or manufacture of intended use components of controversial weapons (including anti-personnel mines, cluster munitions, chemical weapons and biological weapons) were also excluded (PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

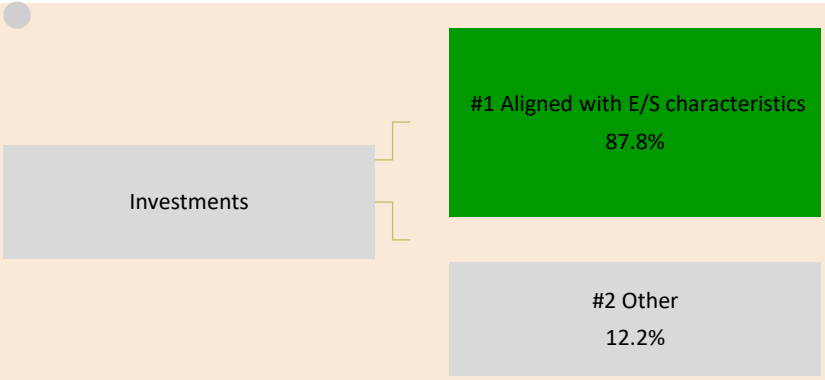
What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	Technology	5.8	UNITED STATES
APPLE INC	Technology	5.8	UNITED STATES
AMAZON.COM INC	Consumer Discretionary	4.9	UNITED STATES
ALPHABET INC-CL A	Communications	4.4	UNITED STATES
NVIDIA CORP	Technology	4.3	UNITED STATES
META PLATFORMS INC-CLASS A	Communications	3.1	UNITED STATES
BROADCOM INC	Technology	2.2	UNITED STATES



VISA INC-CLASS A SHARES	Financials	2.1	UNITED STATES
HOME DEPOT INC	Consumer Discretionary	2.1	UNITED STATES
MASTERCARD INC - A	Financials	2.1	UNITED STATES
JPMORGAN CHASE & CO	Financials	1.9	UNITED STATES
CENTERPOINT ENERGY INC	Utilities	1.9	UNITED STATES
TJX COMPANIES INC	Consumer Discretionary	1.8	UNITED STATES
BOSTON SCIENTIFIC CORP	Health Care	1.6	UNITED STATES
NETFLIX INC	Communications	1.6	UNITED STATES

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Technology	28.4

Consumer Discretionary	15.1
Financials	14.6
Communications	12.2
Industrials	9.3
Health Care	5.8
Utilities	5.4
Consumer Staples	4.6
Energy	2.4
Real Estate	1.3
Materials	0.9

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

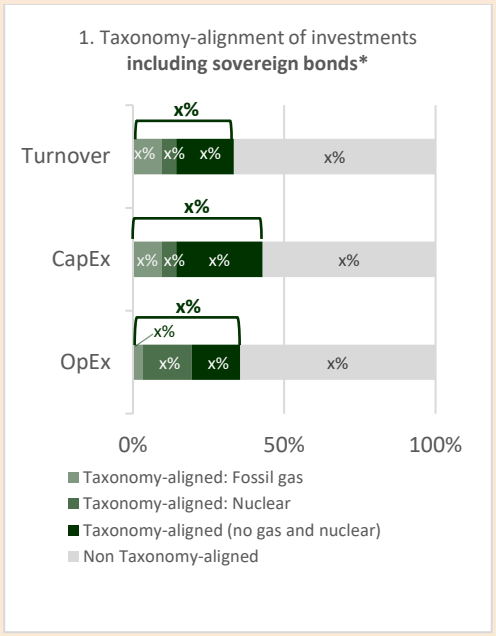
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

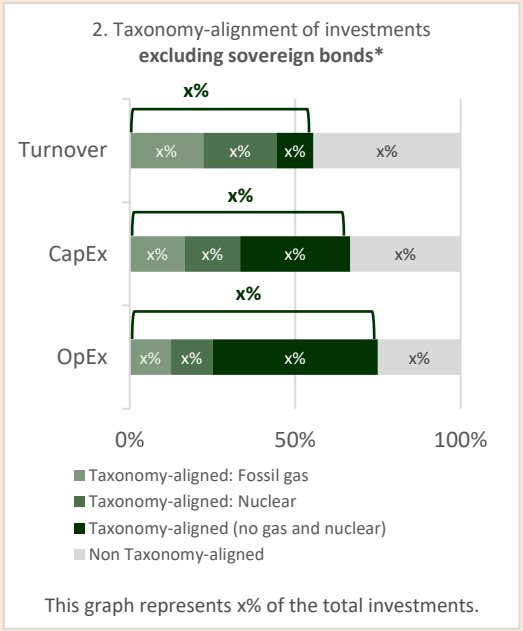
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[12]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[12] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager’s investment teams’ analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment’s alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient or third-party rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team’s proprietary environmental, social or governance analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of the Portfolio’s environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as

an important part of its long side investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the long side of the Portfolio were attained, the long side of the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

As mentioned above, only long positions are covered by the above listed NB avoidance criteria and involvement policies.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Multi Cap Opportunities Fund (the "**Portfolio**")

Legal entity identifier: 549300K77TBAIVA0NY51

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: B G: 2.0	ES: A-D G: 1-4	100%
Third-Party Data	6.5	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company.

The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: C G: 2.3	6.2	99%
2023 reference period	ES: B G: 2.2	6.2	99%
2024 reference period	ES: B G: 2.0	6.4	100%
2025 reference period	ES: B G: 2.0	6.5	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

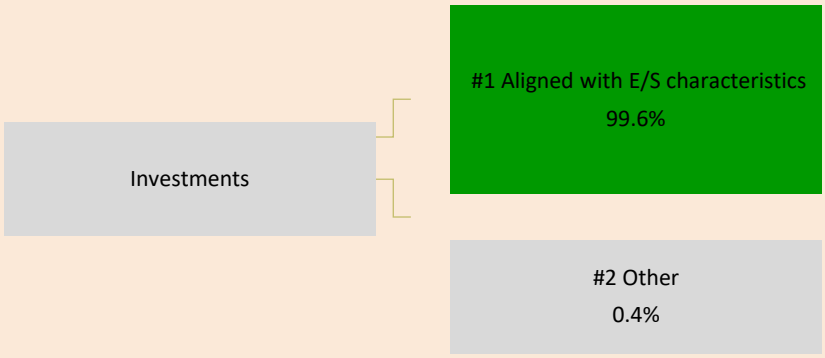
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
MICROSOFT CORP	Technology	5.5	UNITED STATES
APPLE INC	Technology	4.7	UNITED STATES
BERKSHIRE HATHAWAY INC-CL B	Financials	4.5	UNITED STATES
ALPHABET INC-CL C	Communications	4.4	UNITED STATES
AMAZON.COM INC	Consumer Discretionary	3.9	UNITED STATES
BROOKFIELD CORP	Financials	3.6	CANADA
JPMORGAN CHASE & CO	Financials	3.3	UNITED STATES
ORACLE CORP	Technology	3.0	UNITED STATES
US FOODS HOLDING CORP	Consumer Staples	2.8	UNITED STATES
HCA HEALTHCARE INC	Health Care	2.7	UNITED STATES
BROADCOM INC	Technology	2.7	UNITED STATES
ARAMARK	Industrials	2.5	UNITED STATES
T-MOBILE US INC	Communications	2.5	UNITED STATES
APOLLO GLOBAL MANAGEMENT INC	Financials	2.4	UNITED STATES
NASDAQ INC	Financials	2.4	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Financials	25.8
Technology	21.7
Industrials	11.2
Consumer Discretionary	10.5
Communications	10.4
Materials	5.4
Consumer Staples	5.4
Health Care	5.3
Utilities	2.9
Energy	1.4

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

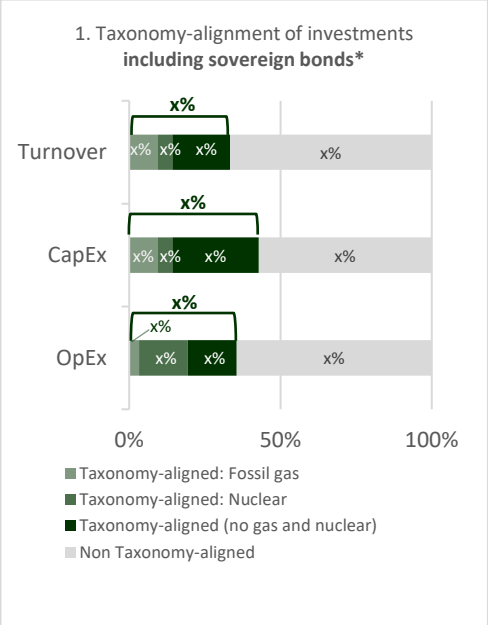
To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

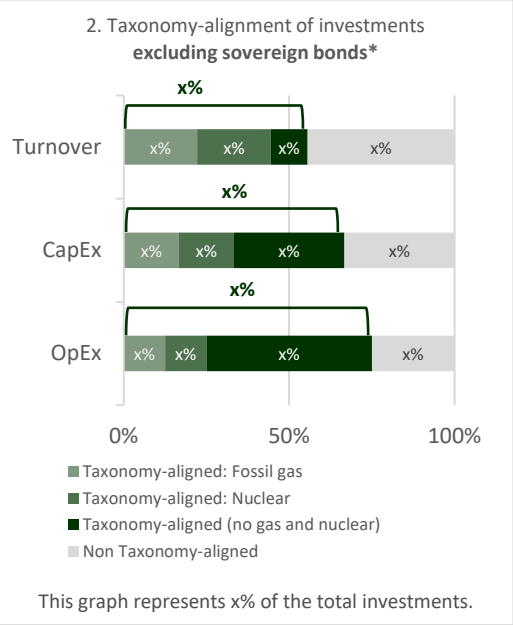
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A – The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Real Estate Securities Fund (the "**Portfolio**")

Legal entity identifier: 549300T9PUOV1AK0OR82

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ **Yes**	● ○ ☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; opportunities in clean technologies; and raw materials sourcing.

- ***Social Characteristics***: access to healthcare; community relations; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; data privacy & security; and controversial sourcing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below. The NB ESG Quotient rating as reported in aggregate below may, where relevant, consider additional environmental and social characteristics to those listed above.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. While the NB ESG Quotient rating of issuers was considered as part of the investment process, there was no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

Reference period	Rating	Range	Combined Coverage

NB ESG Quotient	ES: B G: 1.9	ES: A-D G: 1-4	100%
Third-Party Data	6.4	0-10	

With regards to the NB ESG Quotient ratings, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each issuer held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics, but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social and governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") is a scenario analysis tool evaluating economic risks and opportunities for corporate issuers under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. As previously notified to shareholders, the Portfolio ceased using CVaR as a sustainability indicator on 1 July 2025.

3. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching, or were not consistent with the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their

research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: B G: 1.5	6.2	100%
2023 reference period	ES: B G: 1.6	6.2	97%
2024 reference period	ES: B G: 2.1	6.3	99%
2025 reference period	ES: B G: 1.9	6.4	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy aligned investments

.

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

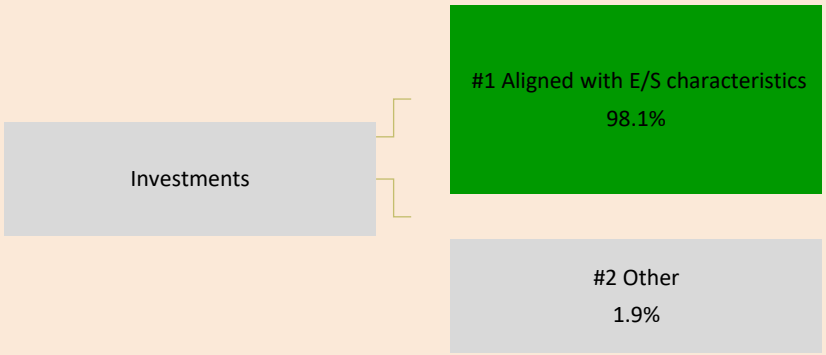
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025



Largest investments	Sector	% Assets	Country
AMERICAN TOWER CORP	Real Estate	9.0	UNITED STATES

KIMCO REALTY CORP	Real Estate	2.4	UNITED STATES
DIGITAL REALTY TRUST INC	Real Estate	2.3	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Real Estate	99.4
Consumer Discretionary	0.6

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective

are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

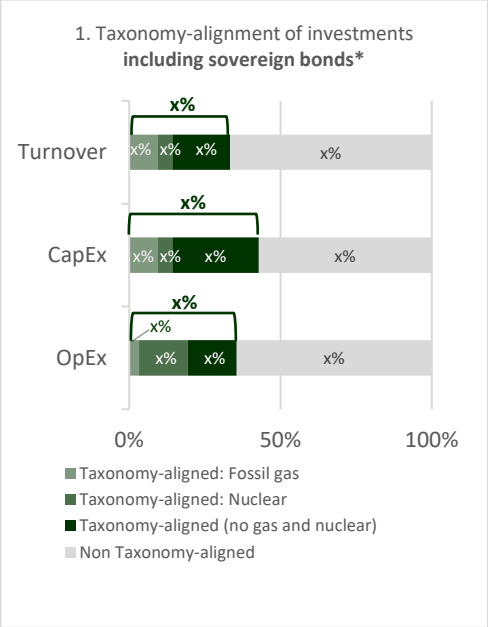
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

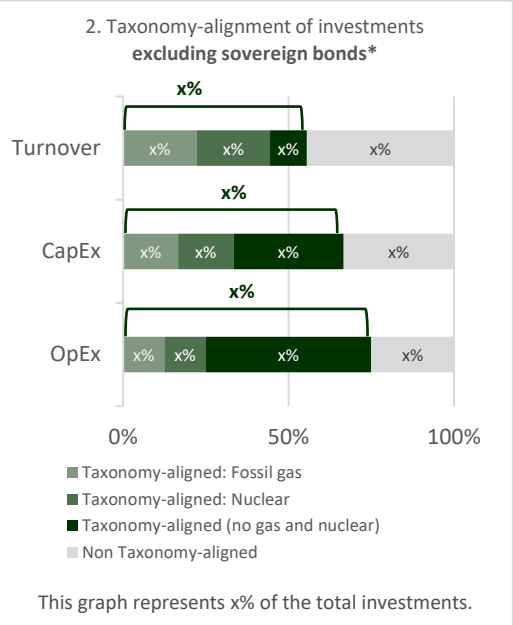
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

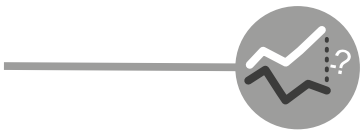
The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of issuers by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate), the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.

The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into their valuation, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.



II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio

were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio has not designated a reference benchmark.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Small Cap Fund (the "**Portfolio**")

Legal entity identifier: 549300CG2QDECVFZQ378

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR **Annex**") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.3	ES: A-D G: 1-4	99%
Third-Party Data	6.0	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio. Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

1. NB ESG Quotient

	NB ESG Quotient Rating	Third-Party Data Rating	Combined Coverage
Range	ES: A-D G: 1-4	0-10	0-100%
2022 reference period	ES: C G: 2.3	5.4	100%
2023 reference period	ES: C G: 2.3	5.6	99%
2024 reference period	ES: C G: 2.4	5.8	100%
2025 reference period	ES: C G: 2.3	6.0	99%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

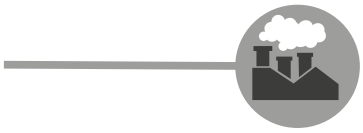
N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:



The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments

How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the avoidance criteria and involvement policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of companies) throughout the Reference Period.

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Greenhouse gas emissions	PAI 1 - GHG emissions PAI 2 - Carbon footprint PAI 3 - GHG intensity of investee companies PAI 4 - Exposure to companies active in the fossil fuel sector
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 13 - Board gender diversity

	PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

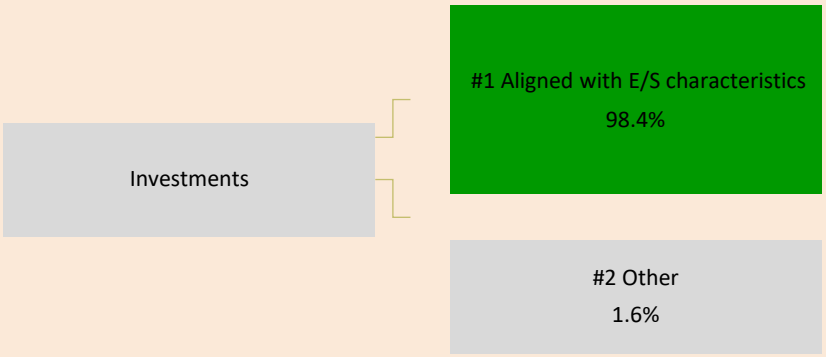
- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the avoidance criteria and involvement policies referenced above, which included consideration of several of the Product Level PAIs.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2025 - 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.



Largest investments	Sector	% Assets	Country
VALMONT INDUSTRIES	Industrials	1.9	UNITED STATES
RBC BEARINGS INC	Industrials	1.7	UNITED STATES
FIRSTSERVICE CORP	Real Estate	1.6	CANADA
CHEMED CORP	Health Care	1.6	UNITED STATES
KIRBY CORP	Industrials	1.6	UNITED STATES

ESAB CORP	Industrials	1.4	UNITED STATES
HAEMONETICS CORP/MASS	Health Care	1.4	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Industrials	36.9
Financials	17.9
Technology	12.4
Consumer Discretionary	8.4
Health Care	6.5
Materials	4.9

Energy	4.8
Utilities	3.8
Real Estate	2.7
Communications	1.5
Consumer Staples	0.2

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

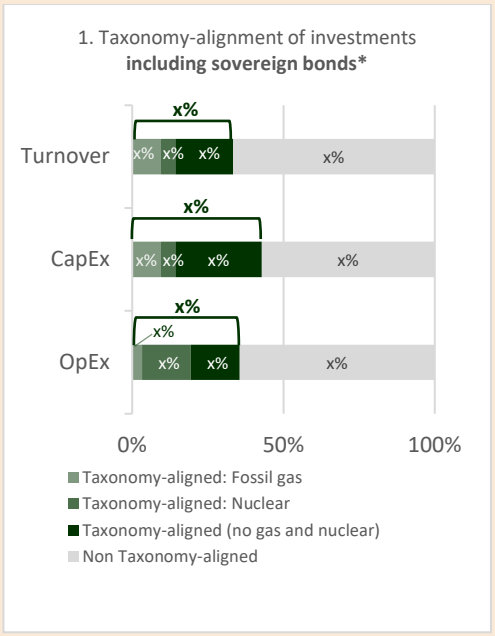
- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

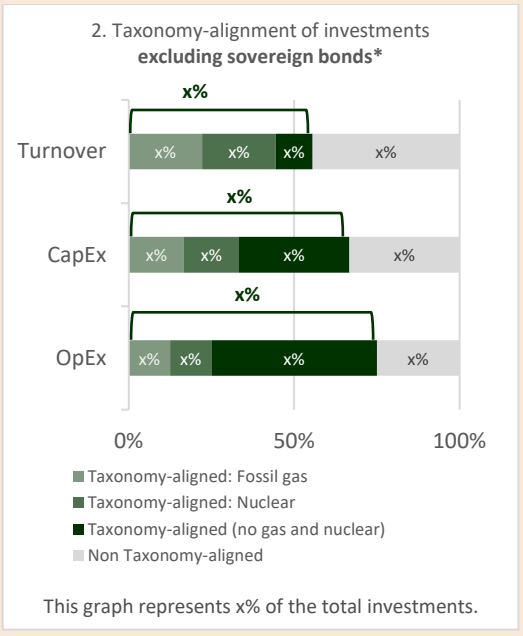
The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:



☐ In fossil gas ☐ In nuclear energy



☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- ***What was the share of investments made in transitional and enabling activities?***

  N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

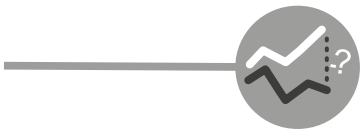
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Small Cap Intrinsic Value Fund (the "**Portfolio**")

Legal entity identifier: 5493006T4864Y1SNKA49

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

The most recent SFDR Pre-Contractual Template of the Portfolio (the "SFDR Annex") can be found here.

Unless otherwise stated in the relevant disclosure, all Reference Period data has been calculated based on the average of the four calendar quarter ends.

This SFDR Periodic Report template reports on several quantitative ESG data metrics. To assist the reader in their review and assessment of such ESG data metrics, we have disclosed the Portfolio's data coverage for these ESG data metrics. The intention is that disclosure of the data coverage (of the ESG metrics during the Reference Period) will allow the reader to interpret the ESG data metrics' ability to represent the Portfolio with any limitations to such data coverage in mind.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- ***Environmental Characteristics***: climate risks; GHG emissions; air quality; biodiversity & land use; water management; energy management; waste management; fuel economy; opportunities in clean technologies; product lifecycle management; and raw materials sourcing.

- ***Social Characteristics***: operational safety & emergency preparedness; access to finance; access to healthcare services; community relations; data privacy & security; health & nutrition; pricing transparency; health & safety; human capital development; labour management; workforce inclusivity; business ethics; product safety, quality & integrity; systemic risk management; management of legal & regulatory environment; supply chain management; controversial sourcing; and chemical safety.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

   The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific financially material environmental, social or governance risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

   Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the environmental, social or governance characteristics that were considered the most likely to be the material drivers of financially material environmental, social or governance risk and opportunity for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

   The NB ESG Quotient assigned weightings to environmental, social or governance characteristics for each sector to derive the NB ESG Quotient rating for companies. While the NB ESG Quotient rating of companies was considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by a company prior to investment. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time. Given the strategy invests in small capitalisation companies, its holdings tend to have less favourable NB ESG Quotient ratings when compared to large capitalisation companies. The Sub-Investment Manager therefore undertakes long-term engagement with the investee companies which may lead to improvements in the underlying environmental and social characteristics promoted over time.

Reference Period	Rating	Range	Combined Coverage
NB ESG Quotient	ES: C G: 2.6	ES: A-D G: 1-4	100%
Third-Party Data	6.8	0-10	

With regards to the NB ESG Quotient rating, for environmental and social ("**ES**") ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance ("**G**") ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating.

The average NB ESG Quotient rating is a weighted average that reflects the environmental, social or governance characteristics that were considered to be the most material drivers of financially material environmental, social or governance risk and opportunity for each company held in the Portfolio. It is not an assessment or rating of the overall Portfolio and its promotion of environmental and social characteristics but rather an assessment of the financially material environmental, social or governance risks and opportunities the Portfolio had exposure to.

Third-party data was also used to measure the resilience of the Portfolio's aggregate holdings to long-term, financially material, environmental, social or governance risks. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

Assessment and management of financially material environmental, social or governance risks and opportunities is an essential element of the Portfolio's promotion of environmental and social characteristics.

2. Avoidance criteria and involvement policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the other specific avoidance criteria detailed in the SFDR Annex of the Portfolio.

Furthermore, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching, or were not consistent with, the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying avoidance criteria and involvement policies to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the avoidance criteria and involvement policies listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

…and compared to previous periods?

Exceptionally for 2024 reference period, the quantitative data disclosed (for the sustainability indicators) was calculated as at 31 December 2024, being the only quarter end in the reference period that followed the reclassification of the Portfolio.

1. NB ESG Quotient

	NB ESG Quotient Rating	**Third-Party Data Rating**	**Combined Coverage**
Range	ES: A-D G: 1-4	0-10	0-100%
2024 reference period	ES: C G: 2.4	6.8	100%
2025 reference period	ES: C G: 2.6	6.8	100%

2. Avoidance criteria and involvement policies

Consistent with the previous reference periods, the Portfolio was managed in accordance with the avoidance criteria and involvement policies detailed in the SFDR Annex during the Reference Period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

N/A – the Portfolio did not commit to holding sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

N/A – the Portfolio did not commit to holding sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching, or were not consistent with, the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Investment Manager considered the principal adverse impacts outlined in the below table on sustainability factors (the "**Product Level PAIs**"):

Product Level PAIs	
Theme	**Adverse sustainability indicator**
Social and employee matters	PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through the application of the avoidance criteria and involvement policies referenced above:

- This excluded issuers identified as being in violation of the UNGP or OECD Guidelines (PAI 10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises).
- Additionally, issuers identified as having corporate involvement in the end manufacture or manufacture of intended use components of controversial weapons (including anti-personnel mines, cluster munitions, chemical weapons and biological weapons) were also excluded (PAI 14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

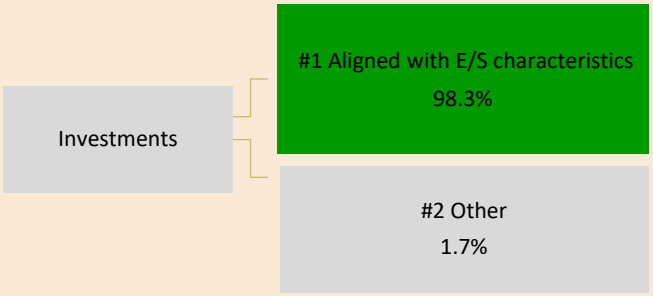
What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 December 2025

The Sub-Investment Manager has used the Bloomberg Industry Classification Standard ("**BICS**") to identify the economic sectors of the Portfolio's top 15 investments.

As the list below is based on an average calculated across the four calendar quarter ends of the Reference Period, this may differ from the top investments of the Portfolio calculated as at 31 December 2025 in the "Schedule of Investments" section of the financial statements.

Largest investments	Sector	% Assets	Country
ORMAT TECHNOLOGIES INC	Utilities	3.1	UNITED STATES
AERCAP HOLDINGS NV	Financials	3.1	IRELAND
KYNDRYL HOLDINGS INC	Technology	3.0	UNITED STATES
RESIDEO TECHNOLOGIES INC	Industrials	2.9	UNITED STATES
VIASAT INC	Communications	2.8	UNITED STATES
KBR INC	Technology	2.5	UNITED STATES
CIENA CORP	Technology	2.4	UNITED STATES
RAMBUS INC	Technology	2.3	UNITED STATES
OPENLANE INC	Consumer Discretionary	2.3	UNITED STATES
CRITEO SA-SPON ADR	Communications	2.2	FRANCE
HUNTINGTON BANCSHARES INC	Financials	2.2	UNITED STATES
VEECO INSTRUMENTS INC	Technology	2.1	UNITED STATES
TECHNIPFMC PLC	Energy	2.0	UNITED KINGDOM



AVERY DENNISON CORP	Materials	1.9	UNITED STATES
MACOM TECHNOLOGY SOLUTIONS	Technology	1.9	UNITED STATES

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation of the Portfolio during the Reference Period is detailed in the chart below.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Economic Sector – BICS	% Assets
Technology	32.0
Industrials	14.9
Utilities	11.3
Consumer Discretionary	9.7
Financials	8.9
Health Care	7.8
Energy	6.4
Communications	4.5
Materials	3.7

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

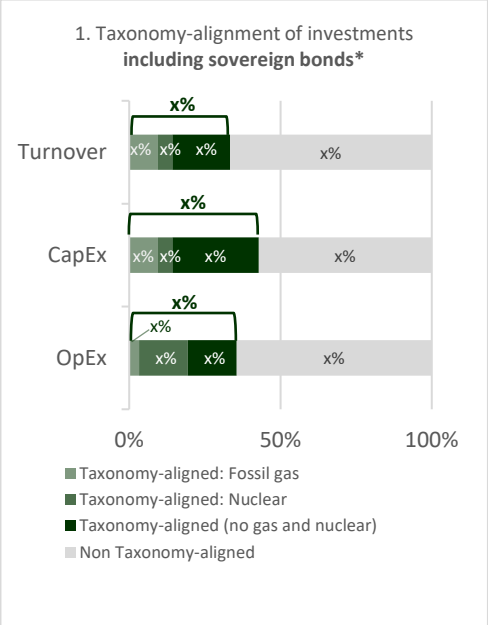
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

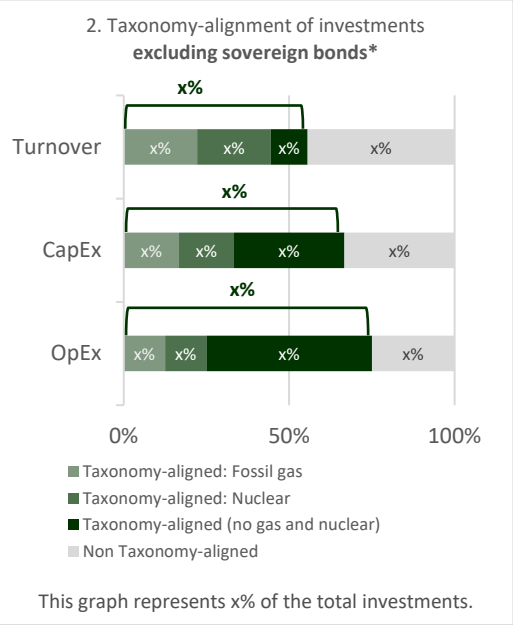
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy



☒ No



[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments in this or the previous reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"Other" included the remaining investments of the Portfolio which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The "Other" section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with avoidance criteria and involvement policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

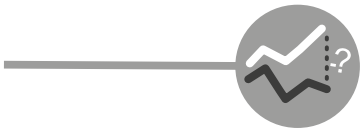
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary environmental, social or governance analysis:

The Sub-Investment Manager applied a high standard of due diligence in the selection and ongoing monitoring of investments made by the Portfolio to ensure the integration of Sustainability Risks (as defined in the SFDR) and environmental, social or governance factors. The Sub-Investment Manager views the integration of environmental, social or governance factors as the practice of incorporating financially material environmental, social or governance risks and considerations (as a binding element) into the investment decision-making process. This integration sits alongside other financial considerations and should enrich the Sub-Investment Manager's investment teams' analysis of companies by providing a toolkit for identifying financially material environmental, social or governance risks and opportunities that inform investment decisions. The Sub-Investment Manager believes that financially material environmental, social or governance factors are an important driver of long-term investment returns from both an opportunity and a risk-mitigation perspective. Hence, the Sub-Investment Manager's integration approach considers financially material environmental, social or governance opportunities as well as Sustainability Risks.

Before making investments, the investment team conducted due diligence that it deemed reasonable and appropriate based on the facts and circumstances applicable to each investment. The investment team assessed the investment's alignment with the environmental and social characteristics promoted by the Portfolio using (as appropriate) the NB ESG Quotient and avoidance screens (to identify potential non-compliance with the above listed avoidance criteria and involvement policies). The due diligence was supported by third-party data sources.



The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment. By integrating the investment team's proprietary environmental, social or governance analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of the Portfolio's environmental and social characteristics and the portfolio construction activities.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including environmental, social or governance topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. Avoidance criteria and involvement policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the avoidance criteria and involvement policies referenced above, which placed limitations on the investable universe.

How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio has not designated a reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  N/A

- ***How did this financial product perform compared with the reference benchmark?***

  N/A

- ***How did this financial product perform compared with the broad market index?***

No reliance may be placed for any purpose on the information and opinions contained in this document or their accuracy or completeness. Opinions expressed herein reflect the opinion of Neuberger Berman and are subject to change without notice. The Company may not be eligible for sale in some countries and it may not be suitable for all types of investor for further information see the current prospectus. Please go to www.nb.com/europe/literature.html for more information.

Fixed income securities are subject to the risk of an issuer's ability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). Fixed income securities are also exposed to the risk that their or their issuers' credit ratings may be downgraded, which can cause a significant drop in the value of such securities.

Lower rated or unrated (i.e. non-investment grade or high yield) securities are more likely to react to developments affecting market and credit risk than are more highly rated securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in high yield securities and understand that such securities generally are not meant for short-term investing. Investors who subscribe in a currency other than the base currency of the Company are exposed to currency risk. Fluctuations in these exchange rates may affect the return on investment.

Past performance is not indicative of future results. For details of the investment risks, which may include but are not limited to liquidity, interest rate, credit and currency risk, see the current prospectus. Please note that any dividends/interest which the Company may receive may be subject to withholding tax. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. The investments of each Portfolio may be fully hedged into the Portfolio's base currency: this may reduce currency risks but may also expose the Portfolio to other risks such as the default of a counterparty. As noted above for further information relating to risks specific to this strategy please see the current prospectus.
