Performance data quoted represent past performance, which is no guarantee of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Results are shown on a "total return" basis and include reinvestment of all dividends and capital gain distributions. Current performance may be lower or higher than the performance data quoted. For current performance data, including current to the most recent month end, please visit www.nb.com/performance.

*The inception date for Neuberger Long Short Fund Class A, Class C and Institutional Class is 12/29/2011.

Average Annual Total Returns with sales charge reflect deduction of current maximum initial sales charge of 5.75% for Class A shares and applicable contingent deferred sales charges (CDSC) for Class C shares. The maximum CDSC for Class C is 1%, which is reduced to 0% after 1 year.

$10,000 HYPOTHETICAL INVESTMENT[7]

The composition, sectors, holdings and other characteristics of the Fund are as of the period shown and are subject to change without notice. All exposure information reflects notional value of underlying securities as applicable.

Since the Fund will typically hold both long and short positions, an investment in the Fund will involve market risks associated with different types of investment decisions than those made for a typical "long only" fund. There is no guarantee that the use of long and short positions will succeed in limiting the Fund's exposure to market movements, sector-swings or other risk factors.

Short sales involve selling a security the Fund does not own in anticipation that the security's price will decline. Short sales may help hedge against general market risk to the securities held in the portfolio but theoretically present unlimited risk on an individual stock basis, since the Fund may be required to buy the security sold short at a time when the security has appreciated in value. The Fund may not always be able to close out a short position at a favorable time and price. If the Fund covers its short sale at an unfavorable price, the cover transaction is likely to reduce or eliminate any gain, or cause a loss to the Fund, as a result of the short sale.

Investing in foreign securities may involve greater risks than investing in securities of U.S. issuers, such as currency fluctuations, potential social, political or economic instability, restrictions on foreign investors, less stringent regulation and less market liquidity.

Shares in the Fund may fluctuate based on interest rates, market condition, credit quality and other factors. In a rising interest rate environment, the value of the Fund's fixed income investments is likely to fall.

Use of derivatives is a highly specialized activity that can involve investment techniques and risks different from, and in some respects greater than, those associated with more traditional investments. Derivatives can be highly complex, can create leverage, may be highly volatile and the Fund could lose more than the amount it invests. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value. There may be imperfect correlation between the behavior of a derivative and that of the reference instrument underlying the derivative. Derivatives involve counterparty risk, which is the risk that the other party to the derivative will fail to make required payments or otherwise comply with the terms of the derivative.

Derivative instruments and short sales may also have an effect similar to that of leverage and can result in losses to the Fund that exceed the amount originally invested. Leverage may amplify changes in the Fund's net asset value ("NAV").

Investments in private companies, including companies that have not yet issued securities publicly in an initial public offering involve greater risks than investments in securities of publicly traded companies. Securities issued by these private companies are generally not freely or publicly tradable so the Fund may not have the opportunity to purchase, or the ability to sell, these securities in the amounts, or at the prices, the Fund desires.

1 **Gross expense** represents the total annual operating expenses that shareholders pay (after the effect of fee waivers and/or expense reimbursement). The Fund's Investment Manager (the "Manager") contractually caps certain direct expenses the Fund (excluding interest, brokerage commissions, acquired fund fees and expenses, taxes including any expenses relating to tax reclaims, dividend and interest expenses relating to short sales, and extraordinary expenses, if any; consequently, total (net) expenses may exceed the contractual cap) through 10/31/2029 for Institutional Class at 1.70%, 2.06% for Class A and 2.81% for Class C (each as a % of average net assets). As of the Fund's most recent prospectus, the Manager was not required to waive or reimburse any expenses pursuant to this arrangement. Absent such arrangements, which cannot be changed without Board approval, the returns may have been lower. Information is as of the most recent prospectus dated 2/28/2026, as amended and supplemented.

2 **The HFRX Equity Hedge Index** is an index of select hedge funds focusing on Equity Hedge strategies. Equity Hedge strategies maintain positions both long and short in primarily equity and equity derivative securities. A wide variety of investment processes can be employed to arrive at an investment decision. Equity Hedge managers would typically maintain at least 50%, and may in some cases be substantially entirely invested in equities, both long and short.

3 **The S&P 500® Index** is a float-adjusted, market capitalization-weighted index that focuses on the large-cap segment of the U.S. equity market, and includes a significant portion of the total value of the market.

4 **Beta** is a measure of the systematic risk of a security or portfolio. Beta measures the historical sensitivity of portfolio or security excess returns to movement in the excess return of the market index.

5 **Sharpe Ratio** measures the risk-adjusted performance. The risk-free rate is subtracted from the rate of return for a portfolio and the result is divided by the standard deviation of the portfolio returns.

6 **Standard Deviation** is a statistical measure of portfolio risk. The standard deviation describes the average deviation of the portfolio returns from the mean portfolio return over a certain period of time. The wider the typical range of returns, the higher the standard deviation of returns, and the higher the portfolio risk.

7 The hypothetical analysis assumes an initial investment of $10,000 made on December 29, 2011, the inception date of the Fund's Institutional share class. This analysis assumes the reinvestment of all income dividends and other distributions, if any. The analysis does not reflect the effect of taxes that would be paid on Fund distributions. The analysis is based on past performance and does not indicate future results. Given the potential fluctuation of the Fund's NAV, the hypothetical market value may be less than the hypothetical initial investment at any point during the time period considered. The above analysis also does not compare the Fund's relative performance to the Fund's prospectus benchmark, the HFRX Equity Hedge Index. Please see annualized performance table.
