What is this product?

This fund is constituted in the form of a mutual fund corporation. It is domiciled in Dublin, Ireland and its home regulator is the Central Bank of Ireland (“CBI”).

Objectives and Investment Strategy

The investment objective of the Fund is to maximize total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments with a focus on downside protection.

The Fund will invest primarily (i.e. at least two thirds of its NAV) in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on Recognised Markets (as defined in the Prospectus) and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

The Fund may also invest in debt securities issued by non-US governments and their agencies and corporations located globally. Exposure to Emerging Market Countries (as defined in the Prospectus) will typically not exceed 30% of the Fund’s NAV.

The Fund may invest up to 10% of its NAV in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.

The Fund may invest in distressed securities which include securities of companies that are in financial distress and that may be in or about to enter bankruptcy.

The Fund may also invest in money market instruments including bank deposits, fixed or floating rate instruments, floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade by recognised rating agencies.

The Fund will not invest more than 10% of its NAV in underlying funds (including exchange traded funds (“ETFs”) which are structured as collective investment schemes) which themselves may invest

up to 10% of their NAV in other collective investment schemes. Underlying funds in which the Fund invests may be leveraged. Currently, the Fund does not invest in any underlying fund which is leveraged.

The Manager and Sub-Investment Manager apply the (i) Neuberger Global Standards Policy, (ii) Neuberger Controversial Weapons Policy, and (iii) Neuberger Thermal Coal Involvement Policy, when determining what investments to make for the Fund. For further sustainability disclosures and details on the avoidance criteria and involvement policies applied by the Fund, please refer to the “Sustainable Investment Criteria” section and Annex VI – “Sustainability Related Disclosures” of the Prospectus, as well as the Supplement and SFDR Annex of the Fund.

The Fund may use financial derivative instruments (“FDI”) for hedging purposes. The Fund may also use FDI (including futures, swaps, forwards, options and swaptions) extensively for investment and/or efficient portfolio management purposes. For clarification, the maximum proportion of the Fund’s NAV that can be subject to total return swaps is 20%. The expected proportion of the Fund’s NAV that will be subject to total return swaps is 5%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

No specific strategy relating to FDI is adopted by the Fund, however the Fund may use FDI to achieve a profit or to hedge existing long positions, hedge against market risk or gain exposure to an underlying market and/or to hedge or gain exposure to an increase in the value of securities or currencies.

The Fund may opportunistically invest up to 10% of its NAV in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

Under normal market conditions, the Fund’s interest rate duration will be within a range of 2 to 8 years. In addition, under normal market conditions, the Fund seeks to maintain an average credit quality rating¹ of investment grade.

The Fund may invest less than 30% of its NAV in instruments with loss-absorption features (such as contingent convertible bonds and bail in bonds).

The Fund may invest no more than 10% of its NAV in insurance-linked securities (“ILS”) such as catastrophe bonds and/or any ILS-related products.

The Fund will not utilise securities lending agreements. The maximum proportion of the Fund’s NAV that can be subject to repurchase agreements and reverse repurchase agreements (over-the-counter based) (“Repo Contracts”) is 10% and the expected proportion of the Fund’s NAV that will be subject to Repo Contracts is 3%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

The Fund is actively managed and does not intend to track the benchmark and is not constrained by it. The benchmark is included in this document for performance comparison purposes only. The Fund gives some consideration to the benchmark constituents in the selection of securities and may not hold all or many of the benchmark’s components.

¹ The average credit quality rating is based on the Barclay’s methodology, which takes the conservative average of ratings provided by Standard & Poor’s Ratings Group (“S&P”), Moody’s Investors Services (“Moody’s”) and Fitch IBCA (“Fitch”). If Moody’s, S&P and Fitch each provides a credit rating, the average credit quality rating of the Fund will be the median of the ratings provided by all three rating agencies. If only two rating agencies provide ratings, the average credit quality rating of the Fund will be the more conservative rating. If only one rating agency provides a rating, the average credit quality rating of the Fund will be the rating provided by that rating agency.

Use of financial derivative instruments / investment in financial derivative instruments

The Fund's net derivative exposure may be up to 50% of the Fund's NAV.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

Investment Risk

The Fund is an investment fund. The Fund's investment portfolio may fall in value and therefore your investment in the Fund may suffer losses.

Fixed Income Securities and Downgrade Risk

Fixed income securities are subject to the risk of an issuer's ability to meet principal and interest payments on the obligation (credit risk), and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). The Fund may invest in fixed-income securities which are interest rate sensitive. An increase in interest rates will generally reduce the value of fixed-income securities, while a decline in interest rates will generally increase the value of fixed-income securities. The performance of the Fund will therefore depend in part on the ability to anticipate and respond to such fluctuations on market interest rates, and to utilise appropriate strategies to maximise returns, while attempting to minimise the associated risks to investment capital. Fixed income securities are also exposed to the risk of being downgraded, which can cause a significant drop in the value of the Fund. The Manager or the Sub-Investment Manager may or may not be able to dispose of the debt instruments that are being downgraded.

Lower Rated Securities Risk

The Fund may invest in lower rated (i.e. non-investment grade or high yield) or unrated debt securities. Such securities are more likely to react to developments affecting market and credit risk than are more highly rated debt securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in lower rated or unrated debt securities and understand that such securities generally are not meant for short-term investing.

The risk of loss due to default by these issuers is significantly greater because lower rated and unrated debt securities of comparable quality generally are unsecured and frequently are subordinated to the prior payment of senior indebtedness. Such securities are generally subject to lower liquidity, higher volatility and greater risk of loss of principal and interest than high-rated debt securities. The Fund may therefore find it more difficult to sell such lower rated or unrated debt securities or may be able to sell these securities only at prices lower than if such securities were widely traded. Furthermore, the Fund may experience difficulty in valuing certain securities at certain times.

Sovereign Debt Risk

The Fund may invest in government/sovereign fixed income securities. The Fund will be exposed to direct or indirect consequences of political, social and economic changes in various countries by investing in sovereign debts. These factors may affect a particular government's willingness to make timely payments for its debt obligations and the sovereign issuers may request the Fund to participate in restructuring such debts. Investment in sovereign debts issued or guaranteed by governments may involve a high degree of risk, as default can occur if the government or sovereign entity is not able or willing to repay the principal and/or interest when due and the Fund may suffer significant losses as a result.

Credit Risk

The Fund may invest in corporate fixed income securities. The Fund is therefore exposed to the risk that corporate issuers of fixed income securities may fail to meet their interest repayments, or repay debt, which may result in the Fund suffering temporary or permanent losses. This risk is greater for investments with a lower credit rating.

Risks associated with Collateralised and/or Securitised Products

The Fund may invest in collateralised and/or securitised products, which may be less liquid than other debt securities, prone to substantial price volatility, and subject to greater credit, liquidity and interest rate risk compared to other debt securities. They are often exposed to extension and prepayment risks and risks that the payment obligations relating to the underlying assets are not met, which may adversely impact the return of the securities.

Emerging Market Countries Risk

The Fund may invest up to one third of its NAV in Emerging Market Countries' debt securities. Investing in Emerging Market Countries may involve heightened risks (some of which could be significant) and special considerations not typically associated with investing in other more established economies or securities markets. Such risks may include, but are not limited to: (a) greater social, economic and political uncertainty including war; (b) higher dependence on exports and the corresponding importance of international trade; (c) greater risk of inflation; (d) increased likelihood of governmental involvement in and control over the economies; (e) governmental decisions to cease support of economic reform programs or to impose centrally planned economies; (f) certain considerations regarding the maintenance of the Fund's securities and cash with non-U.S. brokers and securities depositories; (g) lower standard of corporate governance; (h) currency risks/control.

These factors may adversely affect the level and volatility of securities' prices and the liquidity of the Fund's investments. Volatility or illiquidity could impair the Fund's profitability or result in losses. Separately, bid and offer spreads of the price of securities may be significant and accordingly, the Fund may incur significant trading costs.

With respect to certain countries, there is the possibility of nationalisation, expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains or other income, limitations on the removal of funds or other assets of the Fund, political changes, government regulation, social instability or diplomatic developments (including war), any of which could affect adversely the economies of such countries or the value of the Fund's investments in those countries.

Currency Risk

The base currency value of the investment of the Fund designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return of and a loss of capital.

The assets of Fund may generally be invested in non-US Dollar denominated securities and any income or capital received by the Fund from these investments may be denominated in the local currency of Investment, whereas the Fund will be denominated in US Dollars. Accordingly, changes in currency exchange rates (to the extent only partially or fully unhedged) between the currency of the relevant Emerging Market Country and the currency in which a class of shares is denominated may affect the value of the shares. As the currency exchange rates of Emerging Market Countries tend to be more volatile than those of more developed economies, the effect of changes in exchange rates on the value of the Fund may be more pronounced than it would be for the Fund if it were investing in more developed markets.

Currency Hedging Risk

While potentially reducing the currency risks to which the Fund would otherwise be exposed, currency hedging instruments may involve the risk of a default by a counterparty (counterparty risk).

Renminbi Currency Risk

Renminbi is currently not a freely convertible currency and is subject to exchange controls and restrictions. Non-Renminbi based investors are exposed to foreign exchange risk and there is no guarantee that the value of Renminbi against the investors' base currencies (e.g. United States Dollars and Hong Kong dollars) will not depreciate. Any depreciation of Renminbi could adversely affect the value of the investors' investment in the Fund.

The Renminbi is traded in both the onshore and offshore markets. While both onshore Renminbi ("CNY") and offshore Renminbi ("CNH") represent the same currency, they are traded in different rates and separate markets which operate independently. Therefore CNY and CNH do not necessarily have the same exchange rate and their movement may not be in the same direction. Any divergence between CNH and CNY may adversely impact investors.

Under exceptional circumstances, payment of redemptions and/or dividend payment in Renminbi may be delayed due to the exchange controls and restrictions applicable to Renminbi.

Liquidity Risk

The Fund may be unable to sell an investment readily at its fair market value. This may affect the value of the Fund and in extreme market conditions, its ability to meet redemption requests upon demand.

Risks relating to the use of FDI

Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage element/component of an FDI can result in a loss significantly greater than the amount invested in the FDI by the Fund. Exposure to FDI may lead to a high risk of significant loss by the Fund.

FDI may be used for hedging purposes. Hedging is a technique used to seek to minimise an exposure created from an underlying position by counteracting such exposure by means of acquiring an offsetting position. The use of hedging techniques may limit the potential upside of the Fund. There is no guarantee that such hedging techniques will be effective and there may be residual exposure of underlying positions remaining unhedged.

Risks associated with distribution out of / effectively out of capital

In respect of Distributing Shares, the Fund may at its discretion pay dividends out of the capital and/or effectively out of the capital of the Fund. Dividends paid out of the capital and/or effectively out of the capital amount to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Such dividends may result in an immediate decrease in the NAV of the relevant shares. The distribution amount and NAV of any hedged class may be adversely affected by differences in the interest rates of the reference currency of the hedged class and the Fund's base currency, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than unhedged classes.

Risks relating to downside protection strategy

While the Fund's investment objective and investment approach seeks to provide downside risk management and aims at managing losses or preserve the capital of the Fund, through the use of prudent security selection and the implementation of hedging and/or efficient portfolio management techniques through the utilisation of FDI, it may also preclude the Fund from fully capturing the upside in rising markets. The Fund may therefore underperform funds that do not adopt such a downside protection strategy in rising markets, due to the fact that the hedging strategies implemented will result in lower net exposure to the markets in which the Fund invests. While the Manager or the Sub-Investment Manager may employ techniques and instruments to mitigate downside risk, there can be no guarantee that they will be successful in achieving the intended outcome under all circumstances and market conditions.

How has the Fund performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the USD A Monthly Distributing Class increased or decreased in value during the calendar year being shown. The USD A Monthly Distributing Class is the representative share class selected, being the share class available to the retail public in Hong Kong which is denominated in the Fund's base currency with the longest track record. Performance data has been calculated in USD including ongoing charges and excluding subscription fee and redemption fee you might have to pay.
- The benchmark of the Fund is Bloomberg U.S. Aggregate Index (Total Return, USD) (formerly known as Bloomberg Barclays U.S. Aggregate Index (Total Return, USD)).
- Fund launch date: 2013
- USD A Monthly Distributing Class launch date: 2014

Is there any guarantee?

This Fund does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?**Charges which may be payable by you**

You may have to pay the following fees when dealing in the shares of the Fund.

<u>Fee</u>	<u>What you pay</u>
Subscription fee (Initial Sales Charge)	Up to 5% of the amount you buy [^]
Switching fee (Exchange Charge)	Up to 1% of the subscription amount [^]
Redemption fee	N/A [^]

[^] Additional fees and service charges in respect of subscriptions for, redemptions of and exchange of shares may be payable by investors to intermediaries/distributors through whom they invest in such amount as they may agree with the relevant intermediary/distributor.

Ongoing fees payable by the Fund

The following expenses will be paid out of the Fund. They affect you because they reduce the return you get on your investments.

	<u>Annual rate (as a % of the Fund's value)</u>
	"A" Class Shares
Management fee	up to 1.00%
Depositary fee	no more than 0.02%
Performance fee	N/A
Administration fee	no more than 0.20%

Other fees

You may have to pay other fees when dealing in the shares of the Fund.

Additional Information

- You generally buy and redeem shares at the Fund's next-determined NAV after the Administrator receives your request in good order on or before 3.00 pm (Irish time) of the dealing day being the dealing cut-off time. The Hong Kong Representative/distributors may impose different dealing deadlines for receiving requests from investors.
- The NAV of this Fund is calculated and the price of shares published each "business day" on the following website: www.nb.com.
- Investors may obtain the past performance information of other share classes offered to Hong Kong investors from the Hong Kong Representative on request and at the following website: www.nb.com.
- The compositions of the dividends (i.e. the relative amounts paid from income and capital) for the last 12 months are available from the Hong Kong Representative on request and at the following website: www.nb.com. The Fund may amend the dividend policy subject to the SFC's prior approval and by giving not less than one month's notice to investors.
- Investors may obtain information on the intermediaries from the Fund's Hong Kong Representative, Neuberger Berman Asia Limited.

- The website mentioned in this document has not been reviewed by the SFC.
