Market Context

The emerging market benchmark delivered a 4.63% return in Q2, driven by tighter spreads - 235bps from 289bps at end-March, while index yields edged lower from 7.02% to 6.92%. Geopolitics remained the dominant market theme throughout the quarter. The signing of a US-Iran interim deal triggered a significant wave of risk-on sentiment, leading to the sharpest quarterly oil price decline since Q1 2020. This dispelled stagflation fears and provided broad tailwinds for both bonds and equities. Central banks struck a more hawkish tone, underpinned by resilient global economic data. Kevin Warsh's inaugural press conference as Fed Chair was hawkish, while the ECB and the Bank of Japan hiked rates. The dollar index rose 1.2% in Q2 - a fourth consecutive quarterly gain.

High yielding markets delivered 6.7% return, outpacing investment grade credits at 2.5%. Ukraine was the top performer, delivering 25.9% as battlefield progress against Russia bolstered investor confidence, while Mozambique also rallied as restructuring concerns faded. India was the main laggard at just 1%, and Senegal followed, as President Faye's dismissal of Prime Minister Sonko raised concerns over IMF relations and a potential sovereign debt restructuring.

Portfolio Positioning

Outperformance was primarily driven by country allocation, with security selection also contributing positively. Top-down positioning detracted.

In country allocation, the most significant contributors were overweight positions in higher-yielding countries, notably Argentina and Sri Lanka, and underweights to low yielding countries, such as Malaysia. The key detractors were the underweight position in higher-yielding Kenya, and the initial underweight to Ukraine. In security selection, our positioning in Mexico contributed, while Ivory Coast was the primary detractor.

In portfolio changes, we added to our overweight positions in Argentina, the Bahamas, and Sri Lanka, where we continue to see favorable and improving credit trajectories, as well as in Venezuela, which remains supported by higher oil output and normalization of relations with the US. We also upgraded Ukraine to overweight and increased our overweight in Lebanon. We reduced our underweight in Indonesia as valuations became more attractive in our view.

We moved from overweight to neutral in Ecuador, and reduced positions in Brazil, Dominican Republic, El Salvador, Ghana, and South Africa, reflecting tight valuations and limited further upside.

We participated in new issues from Brazil, Costa Rica, Mexico, Morocco, Poland, Serbia, Baiterek Holdings of Kazakhstan, Argentina’s Chubut province, and PIF of Saudi Arabia.

Outlook

US policy and financial market dynamics are set to remain the principal driver of emerging market performance in the months ahead. Geopolitical uncertainty in the Middle East persists, though the US-Iran interim deal has meaningfully improved the broader macroeconomic backdrop for the EM universe.

EM fundamentals remain on solid footing. The growth differential over developed markets is approaching 2%, credit quality continues to improve - evidenced by a broad wave of sovereign and corporate rating upgrades - and default rates remain low. Against this backdrop, EM fixed income is well-positioned to capture further upside from what we expect to be a sustained recovery in asset class flows.

While EM spreads have narrowed towards the tight end of their historical range, we continue to see value and spread compression opportunities across improving credits with clear rating upgrade trajectories and selected off-benchmark bonds.
