Market Context

In September, global investment grade (IG) fixed income delivered negative total returns, as measured by the Bloomberg Global Aggregate Corporate Index (USD hedged), as a third consecutive month of government bond weakness and wider spreads weighed on credit. European credit sectors also declined but held up better than global IG corporates, with Pan-European and Euro corporate indices falling roughly 1.2% and Pan-European high yield declining 1.66% as spread widening outweighed carry. For the third quarter and year-to-date period, European credit again outperformed global IG corporates, with European high yield delivering the strongest return over the quarter (−1.22%) and the only clearly positive year-to-date return among the indices (+1.36%), while Euro and Pan-European IG corporates were roughly flat year to date.

The Bloomberg Global Aggregate Corporates Index (USD hedged) returned −2.10% for the month (−3.12% for 3Q), while the Bloomberg Euro-Aggregate Corporates Index (USD hedged) returned −1.18% (−2.12% for 3Q). Pan-European Aggregate Corporates returned −1.16% (−2.07% for 3Q) and Pan-European High Yield returned −1.66% (−1.22% for 3Q), both USD hedged.

Interest rate markets across major developed sovereign curves sold off sharply and in unison in September, the third consecutive monthly decline for government bonds, as higher energy prices, heavy debt issuance and a series of central bank decisions pushed yields higher. Germany's 10-year Bund yield rose 26 bps to close at 3.58%, while Italy's 10-year yield climbed 49 bps to 4.63%, widening the Italy–Bund spread by roughly 23 bps to about 105 bps. The U.K. 10-year gilt yield increased 35 bps to 5.41%, near its highest level since 2007, while U.S. Treasury 10-year yields rose 41 bps to 5.16%, a level last seen in 2007. For the quarter, the 10-year Bund yield rose roughly 72 bps from 2.86% at the end of June, the gilt about 65 bps from 4.76% and the Treasury about 69 bps from 4.47%. With yields sharply higher, spreads wider and rate volatility elevated, fixed income total returns were negative in September and for the quarter. These moves reflected a repricing of global policy expectations as market participants weighed central bank tightening, fiscal and supply concerns, geopolitical risks and upside inflation surprises tied to energy prices.

Macro conditions through September reflected firmer activity alongside re-accelerating inflation. At its September 10 meeting, the ECB raised all three key policy rates by 25 bps, taking the deposit facility rate to 2.50% (effective September 16)—its second hike of 2026 after a pause in July—citing inflation pressures tied to the Middle East conflict while retaining a data-dependent, meeting-by-meeting approach. Euro area headline CPI rose to 3.2% year-over-year in August, and the September flash estimate accelerated further to 3.8%, above expectations, while core inflation edged up to 2.5% from 2.4%. Growth surprised to the upside: Q2 GDP was revised up to +0.6% QoQ from a flat Q1, and the September flash composite PMI rose to 53.1, its highest level since April 2023. Stronger activity and higher inflation lifted expectations for further ECB tightening, adding to EUR rates volatility. Elsewhere, the Bank of England held Bank Rate at 3.75% on a 6–3 vote with three members favouring a hike, and the U.S. Federal Reserve raised rates by 25 bps to 3.75%–4.00%, its first increase since 2023.

Credit Markets and Spreads

In September, credit spreads widened meaningfully across global and European credit, reversing part of the second-quarter tightening. The sell-off in government bonds, heavy supply, renewed European sovereign stress and rising inflation and policy uncertainty outweighed continued demand for yield and broadly stable issuer fundamentals. The widening was most pronounced in higher-beta European high yield, and was seen across most sectors globally, led by Business Development Companies, Software and Real Estate. Technicals nonetheless remained constructive in European IG: primary issuance was robust, orderbooks were frequently multiple times covered and new issue concessions were limited. For the quarter, spreads widened across all four segments, and the year-to-date picture turned modestly negative, with spreads ending September wider than year-end levels.

- Global Aggregate Corporate spreads widened about 5 bps in September, ending the month at approximately 85 bps; for 3Q, spreads widened about 7 bps and are roughly 5 bps wider YTD.
- Euro Corporate spreads widened about 12 bps in September, closing at approximately 91 bps, after widening about 11 bps during 3Q; YTD, spreads are around 13 bps wider.
- Pan-European IG Corporate spreads widened about 11 bps month over month, finishing September at approximately 91 bps; spreads widened about 10 bps in 3Q and are roughly 12 bps wider YTD.
- Pan-European High Yield corporate spreads widened about 44 bps in September to close at approximately 321 bps and widened about 38 bps over 3Q; the segment is roughly 40 bps wider versus year-end levels of around 281 bps but remains inside end-of-first-quarter levels.

Overall, September's spread widening reversed a meaningful part of the second-quarter recovery in European credit, but it was driven largely by rates, supply and technical pressure rather than a deterioration in credit quality. Underlying fundamentals across European IG and HY issuers remain broadly intact, with balance sheets and refinancing access still supportive, while higher all-in yields improve the carry cushion and entry points. In sterling, issuance increased but remained manageable relative to demand, with Financials generally outperforming. That said, rate volatility remains elevated and spreads are still relatively tight by historical standards, reinforcing the need for selectivity. In line with NB's current fixed income views, we remain constructive but disciplined: carry is attractive, but performance is likely to be driven more by issuer selection, quality bias and relative value than by broad spread compression from here.

From an economic conditions' perspective, we saw the following:

- **Eurozone**: Eurostat's updated estimate showed Q2 2026 GDP growth of +0.6% QoQ (+1.2% YoY), up from a flat Q1, though the quarter was flattered by a sharp rebound in Ireland (+10.2% QoQ) after its Q1 contraction. Inflation re-accelerated: headline euro area CPI rose to 3.2% YoY in August and the September flash estimate jumped to 3.8%, driven by energy, while core CPI edged up to 2.5% from 2.4%.

- Activity indicators strengthened: the September flash composite PMI rose to 53.1 from 52.0 in August, with services at 53.0 from 51.6, the strongest composite reading since April 2023 and a third consecutive month of expansion. At its September 10 meeting, the ECB raised all three key interest rates by 25 bps, taking the deposit facility rate to 2.50% (main refinancing rate 2.65%, marginal lending rate 2.90%), effective September 16—the second increase of 2026, following June and a hold in July. The Council said inflationary pressures from the Middle East conflict would keep inflation above the 2% target for an extended period, with risks to the inflation outlook tilted to the upside, while maintaining its data-dependent, meeting-by-meeting framework with no pre-committed rate path. The next policy decision is on October 29.

- **Germany**: expanded roughly 0.2% QoQ in Q2, in line with France and Italy, and the improvement in the September PMIs points to firmer momentum into Q3. Medium-term fiscal support remains the key potential tailwind for the growth outlook, although the rise in the 10-year Bund yield to 3.58% is tightening financial conditions.

- **Spain**: again outperformed regional peers with Q2 growth of +0.7% QoQ, retaining its status as the strongest performer among the large Eurozone economies, supported by resilient domestic demand and the improvement in services activity across the region.

- **Italy**: grew roughly 0.2% QoQ in Q2, in line with the other large economies, but the 10-year yield rose about 49 bps in September to 4.63% and the spread to Bunds widened to around 105 bps as renewed European sovereign stress and heavy supply weighed on peripheral bonds.

- **UK**: Inflation data for the UK were less encouraging in August. Headline CPI rose to 3.1% YoY from 2.9% in July, driven by higher petrol and diesel prices that lifted goods inflation to 2.7%, while core CPI was unchanged at 2.6% and services inflation held at 3.4%. Real GDP grew 0.5% QoQ in Q2 following 0.6% in Q1, while the labour market remained soft, with unemployment at 4.9% in the three months to July and private-sector regular pay growth easing to 2.9%. The BoE MPC voted 6–3 to hold Bank Rate at 3.75% at its September meeting—the sixth consecutive hold—with three members (Greene, Mann and Pill) dissenting in favour of a 25bps increase to 4.00%, up from two dissenters in June. The Committee judged that risks to inflation are tilted to the upside, signalled that policy may need to tighten if the Middle East conflict persists and second-round effects emerge, and voted unanimously to reduce its stock of gilt holdings, adding to supply pressure in the gilt market. The near-term policy path hinges on whether energy-driven price pressures spill into wages and services inflation; the next decision on November 5 looks closely balanced, and the 10-year gilt yield at 5.41% reflects both higher policy-rate expectations and elevated term premia.

Within investment grade and non-investment grade corporates, fundamentals remain broadly stable, supported by higher-quality issuers in IG and structurally lower beta in high yield that continue to limit the risk of severe spread widening. The September widening reflected rates, supply and technical pressure rather than a broad deterioration in credit fundamentals; idiosyncratic risks remain most acute at the low end of the quality spectrum, and higher energy costs and a tightening bias at the ECB and Bank of England add to refinancing-cost and margin risks.

Spreads have moved off their historical tights, and with all-in yields at multi-year highs, resilient investor demand and broadly stable issuer fundamentals, carry-oriented positioning is better supported than it was a quarter ago. Looking ahead, EUR IG issuance remains on track for a record year, with September corporate supply of roughly €56bn taking year-to-date volumes to around €389bn, about 11% ahead of last year, and we expect the October calendar to remain active; however, rate volatility, a possible further ECB hike on 29 October and the Bank of England decision on 5 November leave investors more disciplined on pricing, favouring higher-quality issuers and shorter/intermediate maturities. Bottom-up credit selection remains critical in finding value and managing downside risk, with a focus on issuers best positioned to navigate higher rates, elevated volatility and an evolving policy environment. Our focus remains on fundamentals as we seek attractive entry points across the investable universe, and we will continue to evaluate positioning to ensure we remain well-aligned with evolving market dynamics.

Performance Drivers

Performance

The portfolio returned -0.94% (net, EUR Hedged) in Q3 2026, underperforming the benchmark (Bloomberg Euro Aggregate 1-3 Year Index, EUR Hedged) by 34bps net of fees.

Some specific key performance drivers for Q3 2026:

- **Credit selection** – Credit selection was a detractor (-24bps) over the quarter, particularly within High Yield consumer cyclical, consumer non-cyclical, and financial sectors.

- **Duration and curve** – Duration was a negative contributor to returns, detracting approximately 18bps from relative performance. Duration was almost flat compared to the benchmark, however given the Fund's sizeable allocation to Investment Grade Credit (including limited longer maturity bonds in the tactical bucket), this was a detractor.

- **Sector allocation** – Sector allocation added +19bps, with our overweight to Securitsed and High Yield, as well as underweight to Sovereign Bonds being the main drivers.

- Through the quarter we cut duration briefly to around 1.7y in July on Hormuz risk, and rebuilt to just below the 2-year upper limit post the sell off towards the end of the quarter. The Fund remains long credit. Over the quarter we increased Investment Grade Credit exposure and reduced High Yield slightly, particularly rich BB bonds. We rotated strong performers into laggards and idiosyncratic opportunities, including taking profit on the software names added earlier in the year. Covered bonds were reduced, whereas we added to Securitised Credit (including consumer loan and auto loan ABS as well as CMBS). We continue to focus on securities across the capital stack with attractive relative valuations, taking part in new issues where premia were attractive.

Conclusion

The Fund has performed very favourably against both peers and the benchmark on a medium-long term basis, **ranking top decile across 2, 3 and 5 years** within the Morningstar peer group (EAA Fund EUR Diversified Bond – Short Term). Active management across our Core and Tactical buckets remains a key focus for the Fund, as we have continued to find opportunities across our universe to add value to performance from both a total return and risk management perspective.

Yields continue to remain at attractive levels, with the investable universe bolstered by higher coupons - which should help sustain performance from a carry perspective.

We thank you again for your continued support.

DISCLOSURES

Neuberger Berman Investment Funds plc (the “Fund”) is authorised by the Central Bank of Ireland (the “Central Bank”) as an Undertaking for Collective Investment in Transferable Securities under the European Communities (“UCITS”) Regulations 2011 (S.I. 352 of 2011) of Ireland, as amended. Neuberger Berman Asset Management Ireland Limited may decide to terminate the arrangements made for the marketing of its funds in all or a particular country. The Fund mentioned in this document may not be eligible for sale in some countries and it may not be suitable for all types of investor. Shares in the fund may not be offered or sold directly or indirectly into the United States or to U.S. Persons; for further information see the current prospectus.

We do not represent that this information, including any third party information, is accurate or complete and it should not be relied upon as such. Opinions expressed herein reflect the opinion of Neuberger Berman Group and its affiliates (“Neuberger”) and are subject to change without notice.

This document is for information purposes only and it should not be regarded as an offer to sell or as a solicitation of an offer to buy the securities or other instruments mentioned herein. No part of this document may be reproduced in any manner without the written permission of Neuberger.

Past performance is not indicative of future results. The value of investments may go down as well as up and investors may not get back any of the amount invested. The performance data does not take account of the commissions and costs incurred by investors when subscribing for or redeeming shares. It should not be assumed that any investments in securities, companies, sectors or markets identified and described were or will be profitable. Investors may not get back the full amount invested. For further details of the investment risks, please refer to the current prospectus. Please note that any dividends/interest which the Fund may receive may be subject to withholding tax. The benchmark does not take into account the effects of tax and the deduction is therefore not reflected in the benchmark return illustrated herein. The investment objective and performance benchmark is a target only and not a guarantee of the Fund performance. The index is unmanaged and cannot be invested in directly. Index returns assume reinvestment of dividends and capital gains and unlike fund returns do not reflect fees or expenses. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. Investments of each portfolio may be fully hedged into its base currency potentially reducing currency risks but may expose the portfolio to other risks such as a default of a counterparty.

Monthly and weekly Distributing Classes will distribute out of income and may also pay out of capital which will be eroded; investors in these classes should be aware that the payment out of capital may have different tax implications from distributions of income and should seek tax advice. In respect of the C, C1, C2, E and B share classes a contingent deferred sales charge may be payable to the Investment Manager in line with the provisions of the Fund’s prospectus.
