

Neuberger Berman Short Duration Bond Fund

[NB.COM/SHORTDURATIONBOND](https://www.nb.com/SHORTDURATIONBOND)
TICKER: Institutional Class: NSHLX, Class A: NSHAX, Class C: NSHCX, Investor Class: NSBIX, Trust Class: NSBTX

Fund Highlights

Robust Investment Process With Risk Management Overlay

Seeks outperformance through a disciplined, relative value approach to sector allocation, research-driven security selection and duration management

Targets Capital Preservation

Diversified portfolio which is anchored on excellence in investment research and in preparation for turbulent markets

Experienced Investment Team Leverages the Entire NB Fixed Income Platform

Fund portfolio managers average 25+ years of experience, backed by 195+ team members spread across several global locations

Management Team

ASHOK BHATIA

31 Years of Industry Experience

DAVID M. BROWN

33 Years of Industry Experience

MICHAEL FOSTER

29 Years of Industry Experience

MATTHEW MCGINNIS

16 Years of Industry Experience

Portfolio Characteristics⁴

Portfolio Assets (\$mn)	170.2
Number of Holdings	343
Date of Last Income Distribution	March 31, 2024
Amount of Last Income Distribution	0.0329
Frequency of Income Distribution	Monthly
Sharpe Ratio (3 Year)	-0.569
Standard Deviation (3 Year)	2.861
Weighted Average Maturity (Years)	3.33
Average Effective Duration (Years)	1.99

30-Day SEC Yield (%)⁶

Institutional Class	5.84
Class A	5.72
Class C	5.71
Investor Class	5.63
Trust Class	5.53

Investment Performance

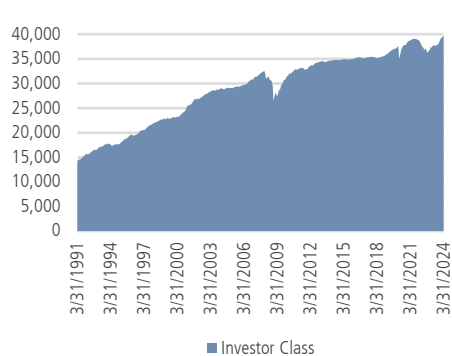

As of March 31, 2024*

Performance data quoted represent past performance, which is no guarantee of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original costs. Results are shown on a "total return" basis and include reinvestment of all dividends and capital gain distributions. Current performance may be lower or higher than the performance data quoted. For current performance data, including current to the most recent month end, please visit www.nb.com/performance.

*The inception dates of Neuberger Berman Short Duration Bond Fund Class A, Class C and Institutional Class is 6/21/10. The inception dates for the Investor and Trust Classes are 6/9/86 and 8/30/93, respectively. Performance prior to the inception date of Trust Class, Class A, Class C and Institutional Class is that of the Investor Class adjusted to reflect applicable sales charges but not class-specific operating expenses. The inception date used to calculate benchmark performance is that of the Investor Class. *Average Annual Total Returns with sales charge reflect deduction of current maximum initial sales charge of 2.5% for Class A shares and applicable contingent deferred sales charges (CDSC) for Class C shares. The maximum CDSC for Class C shares is 1%, which is reduced to 0% after 1 year.*

Agency MBS	8.2
Securitized Credit	31.6
Non-Investment Grade Credit	11.8
Investment Grade Credit	44.9
Cash	3.1

Duration Distribution (%)

Less than One Year	36.9
One to Two Years	21.1
Two to Three Years	21.5
Three to Five Years	18.0
Five + Years	2.6

Shares in the Fund may fluctuate, sometimes significantly, based on interest rates, market conditions, credit quality and other factors. Generally, bond values will decline as interest rates rise. Typically, the longer the maturity or duration of a debt security, the greater the effect a change in interest rates could have on the security's price. The market's behavior is unpredictable and there can be no guarantee that the Fund will achieve its goal. Lower rated debt securities (also known as "junk bonds") involve greater risks and may fluctuate more widely in price and yield, and carry a greater risk of default, than investment grade debt securities. They may fall in price during times when the economy is weak or is expected to become weak. Derivatives involve risks different from, and in some respects greater than, those associated with more traditional investments. Derivatives can be highly complex, can create investment leverage and may be highly volatile, and the Fund could lose more than the amount it invests. Derivatives may be difficult to value and may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative position at a particular time or at an anticipated price. The Fund's investments in derivatives create counterparty risk. Foreign securities involve risks in addition to those associated with comparable U.S. securities, including exposure to less developed or less efficient trading markets; social, political or economic instability; fluctuations in foreign currencies; nationalization or expropriation of assets; settlement, custodial or other operational risks; and less stringent auditing and legal standards. These risks may be more pronounced for emerging market securities, which involve additional risks and may be more volatile and less liquid than foreign securities tied to more developed economies. The Fund's performance could be affected if borrowers pay back principal on certain debt securities, such as mortgage- or asset-backed securities, before or after the market anticipates such payments, shortening or lengthening their duration and could magnify the effect of the rate increase on such security's price. When issued and forward-settling securities can have a leverage-like effect on the Fund, which may increase fluctuations in the Fund's share price and may cause the Fund to liquidate positions when it may not be advantageous to do so in order to satisfy its purchase obligations. Leverage amplifies changes in the Fund's net asset value.

Unless otherwise stated, information (including holdings and portfolio characteristics) is as of the quarter end indicated in the document title and is subject to change without notice.

¹The Fund's Investment Manager (the "Manager") currently caps certain Class A, Class C, Institutional Class, Investor Class and Trust Class expenses. Absent such arrangement, which is subject to change, the total returns would have been less. The Investor and Trust Classes are closed to new investors.

² The Bloomberg 1-3 Year U.S. Government/Credit Bond Index is an unmanaged index of government and credit securities with maturities between 1 and 3 years (including corporate, sovereign, supranational and taxable municipal bonds). Please note that indices do not take into account any fees and expenses of investing in the individual securities that they track, and that individuals cannot invest directly in any index. Data about the performance of this index are prepared or obtained by the Manager and reflect the reinvestment of income dividends and other distributions, if any. The Fund may invest in many securities not included in the above-described index.

³Total (net) expense represents the total annual operating expenses that shareholders pay (after the effect of fee waivers and/or expense reimbursement). The Fund's investment manager has contractually undertaken to waive and/or reimburse certain fees and expenses of the Fund so that the total annual operating expenses are capped (excluding interest, brokerage commissions, acquired fund fees and expenses, taxes including any expenses relating to tax reclaims, dividend and interest expenses relating to short sales, and extraordinary expenses, if any; consequently, total (net) expenses may exceed the contractual cap) through 10/31/2026 for Institutional Class at 0.34%, Investor Class at 0.54%, Trust Class at 0.64%, Class A at 0.71% and Class C at 1.46% (each as a % of average net assets). Absent such arrangements, which cannot be changed without Board approval, the returns may have been lower. Information as of most recent prospectus dated February 28, 2023, as amended and supplemented.

⁴**Sharpe Ratio** (average 3-year shown) is a measure of the risk-adjusted return of a portfolio. The ratio represents the return gained per unit of risk taken. The Sharpe ratio can be used to compare the performance of managers. Managers with the same excess return for a period but different levels of risk will have Sharpe ratios that reflect the difference in the level of risk. Standard Deviation is a statistical measure of portfolio risk. **Standard Deviation** (average 3-year shown) describes the average deviation of the portfolio returns from the mean portfolio return over a certain period of time. Standard Deviation measures how wide this range of returns typically is. The wider the typical range of returns, the higher the Standard Deviation of returns, and the higher the portfolio risk. **Weighted Average Maturity** is expected average life to worst or in other words the par-weighted average time (in years) to principal repayment for securitized assets or the time (in years) to probable call/put for non-securitized assets. **Average Effective Duration** can be a useful tool in measuring the price sensitivity of the portfolio to changes in interest rates and measures the % change in price for a 100 bps of shift in interest rates. Unlike other measures of duration, average effective duration takes into account any optionalities (e.g. whether the instrument is callable at a certain price) embedded within each security in the portfolio. Generally, the larger the duration, the more sensitive the portfolio will be to a change in interest rates. Instruments with higher effective durations often carry more risk and have higher price volatility than those with lower durations.

⁵The hypothetical analysis assumes an initial investment of \$10,000 made on June 9, 1986, the inception date of the Fund's Investor share class. This analysis assumes the reinvestment of all income dividends and other distributions, if any. The analysis does not reflect the effect of taxes that would be paid on Fund distributions. The analysis is based on past performance and does not indicate future results. Given the potential fluctuation of the Fund's Net Asset Value (NAV), the hypothetical market value may be less than the hypothetical initial investment at any point during the time period considered. The above analysis also does not compare the Fund's relative performance to the Fund's prospectus benchmark, the Bloomberg 1-3 Year U.S. Government/Credit Bond Index. Please see annualized performance table.

⁶A fund's 30-day SEC yield is similar to a yield to maturity for the entire portfolio. The formula is designated by the Securities and Exchange Commission (SEC). **Past performance is no guarantee of future results.** Absent any expense cap arrangement noted above, the SEC yields may have been lower. A negative 30-Day SEC yield results when a Fund's accrued expenses exceed its income for the relevant period. Please note, in such instances the 30-Day SEC yield may not equal the Fund's actual rate of income earned and distributed by the fund and therefore, a per share distribution may still be paid to shareholders. The unsubsidized 30-day SEC yields for Class A, Class C, Institutional Class, Investor Class and Trust Class are 5.48%, 5.45%, 5.61%, 5.36% and 5.20%, respectively.

⁷Chart represents the ratings of the securities held by the Fund and does not imply any credit rating of the Fund itself. Credit-quality ratings are obtained from Barclays using ratings derived from Moody's, S&P, and Fitch. When calculating the credit quality breakdown, if a security is rated by each of these three rating agencies, then the middle rating will be used. If only two rating agencies rate a security, then the lower of the two ratings will be used. If only one rating agency rates a security, then that one rating will be used. Where none of the agencies rate a security, the security will be considered unrated. Portfolio holdings, underlying ratings of holdings and credit quality composition may change materially over time.
